Yet, when I look up to the Senate gallery, I often feel a twinge of guilt. Classes of schoolchildren from neighboring States are among our frequent visitors. They look down upon us Senators with a sense of awe. Occasionally they buttonhole us in the ornate Capitol corridors and eagerly ask for our autographs. I try to engage these students in conversation as often as possible, seeking their views and opinions. They seem so earnest and trusting, so grateful for a few moments of our time. But I become uncomfortable in their presence. I wish more fervently than ever that the big subsidies in the Federal budget were for aid to schools and for child welfare programs, because that is where I think they could contribute most to the enduring greatness of America as a free nation.

Opposing Views on United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mood in Washington," written by James Reston and published in today's New York Times, which is an analysis of opposing views of United States' foreign policy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOOD IN WASHINGTON—FULBRIGHT AND EISENHOWER SET FORTH OPPOSITE VIEWS OF UNITED STATES' FOREIGN POLICY

(By James Reston)

WASHINGTON, August 6.—Two events that occurred today in Washington illustrate and dramatize the strange and contradictory mood of the capital.

On Capitol Hill Senator J. WILLIAM FULBRIGHT, the second-ranking Democratic member of the Foreign Relations Committee, delivered the most critical attack on the administration's foreign policy to be heard in the Senate this year.

Coincidentally, President Eisenhower ranged over the fundamentals of that foreign policy in his news conference this morning without conceding that any of the problems in the world today were in the least chargeable to the conduct of our affairs.

If this were mere partisanship, it could be dismissed as the beginning of election-campaign oratory, but it is much more than this. It represents a fundamental difference that has been steadily growing here in the estimates of where the United States stands in the world today.

The President followed the line today he has followed from the beginning. He saw a world full of complicated problems that could be resolved if the Nation continued patiently to follow the principles he and his associates had repeatedly defined and followed.

NO NEED FOR CHANGE SEEN

He agreed that policies must be under constant review but there was nothing in his words or manner to suggest any need for fundamental changes in the policies or personnel of the State Department.

In contrast, Senator FULBRIGHT characterized these policies as "inadequate, outmoded and misdirected." He attacked the administration's Middle East policy, and its "readiness to use the spectre of Soviet communism as a cloak for the failure of our own leadership."

Finally he called for a hard re-examination of these policies, and served notice on the administration that such an examination would take place, if not by the administration itself, then by the Foreign Relations Committee.

Senator FULBRIGHT'S outburst may very well mark the beginning of a campaign by the rising young Democrats on the Foreign Relations Committee to force a change in the policies and direction of the State Department.

The Arkansas Senator is the leader, in fact, if not in title, of the majority on that committee. He has lost all confidence in Secretary of State Dulles. He is convinced that two more years of the present leadership and policies of the State Department will be disastrous, and he has now embarked upon a campaign to do something about it.

This has been coming on for a long time, but without the support of the Democratic leadership of either the House or the Senate. Speaker SAM RAYBURN in the House and LYNDON B. JOHNSON in the Senate share many of his worries about both the President and the Secretary of State, but so far they have hesitated to use their political power to try to force any major changes.

If no changes take place between now and the election, it can be taken for granted that a major effort will be made to change the Democratic strategy from one of bipartisan cooperation to one of stern opposition.

MEMBERS IN THE GROUP

A majority on the Democratic side of the Foreign Relations Committee is almost as concerned as Senator FULBRIGHT about the present trend of events. Included in this increasingly critical group are Senators HUBERT H. HUMPHREY of Minnesota; MIKE MANSFIELD, of Montana; JOHN F. KENNEDY, of Massachusetts; JOHN J. SPARKMAN of Alabama; and WAYNE MORSE, of Oregon.

For the last 2 years these members have been asked by the administration to go along with policies whose effectiveness they have increasingly come to doubt.

One the whole, they have cooperated, but every foreign policy reverse has added to their sense of frustration, and this is now beginning to spill over into talk of an organized effort to force major changes.

Those who favor such a move argue as follows:

The Democrats have acquiesced in policies that have weakened the alliance for the last 6 years. Scholarly speeches and political argument have not moved Mr. Dulles. The Democrats have thus been partners in policies and tactics they did not approve.

Therefore, if the Democrats increase their majorities in both Houses in the November election, as seems likely, the Democratic leadership will be confronted with 1 of 2 choices: To continue supporting a Secretary of State in policies and methods they regard as detrimental to the Nation, or to try to force changes in both the substance and administration of foreign policy. This is the theme.

CHOICE FOR THE PRESIDENT

It remains to be seen, of course, whether the Democrats can agree to confront the President with a choice between a rebellious Foreign Relations Committee or dismissing

Mr. Dulles. Even the dissidents on the Foreign Relations Committee differ in the degree of their opposition to the Secretary of State, and some, for political reasons, would rather see the Republicans take full responsibility for running the State Department than force the President to add Democrats to his Cabinet.

Nevertheless, the Fulbright speech today is significant of a growing opposition. The truce forced by the need for unity while the Marines were landing in the Middle East is coming to an end and at least some influential Democrats are now beginning to say in private that their duty in the future seems to lie, not in sullen cooperation, but in open opposition.

Action on Farm Bill Needed Now

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Action on Farm Bill Urged This Session," published in the Dallas Times-Herald on August 10, 1958.

Mr. President, since this article was printed, 4 days ago, in the Dallas Times-Herald, one of the leading daily newspapers in the South, the West, and the Midwest, real and gratifying progress has been made on the farm bill. It has passed the House, and there is hope for a farm bill within the next few days.

I ask unanimous consent that an Associated Press article which appeared in many newspapers on Sunday, August 10, 1958, and among others, in the Dallas Times-Herald, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACTION ON FARM BILL URGED THIS SESSION

Leaders in the cotton and rice industries of Texas Saturday predicted disaster unless Congress passes a new farm bill.

They made their prediction after House Speaker SAM RAYBURN, Democrat, of Texas, said farm legislation appeared dead for this session.

RAYBURN'S estimate came shortly after Agriculture Secretary Ezra Taft Benson issued the dire prediction that cotton farmers will be forced to cut back acreage 22 percent and rice farmers 45 percent unless Congress acts to change present laws.

But a Texas and United States cotton leader said Saturday that he still has hopes a bill will be passed. And a farm expert in the State's rice belt predicted farmers will vote down rice controls if House inaction results in further acreage reductions.

Meanwhile, Lamar Fleming, Jr., chairman of Anderson, Clayton & Co., worldwide cotton firm, said the threatened acreage cuts would be catastrophic to the entire South.

SAYS PROPS PERILED

"If this cutback holds, it will be so disastrous and the cost of the program so scandalous there will be an explosion," Fleming said. "It could well be the end of the price-support program."

R. H. Stansel, Harris County Rice Growers Association secretary, said such a cut "would put a whale of a lot of growers out of business. And they wouldn't be alone. Driers, mills, implement dealers, and farm laborers would be affected tremendously."

Burris Jackson, Hillsboro, chairman of the American Cotton Congress, said that "if present law is not changed, the American cotton industry faces disaster next year and it will be a major blow to the whole economy."

The House voted down a new farm bill Wednesday under procedure requiring a two-thirds majority for passage.

Speaker SAM RAYBURN, Democrat, of Texas, said Friday it would be futile to give further consideration to farm legislation.

SEEK CONFERENCE

But Jackson and others hope to bring up the farm bill under regular procedure—whereby a bare majority will be sufficient to send it to a House-Senate conference committee.

Unless a farm bill is passed, cotton acreage is expected to be cut as much as 22 percent next year. Rice acreage would be cut 45 percent.

The reductions would come under present laws which set acreage on the basis of supplies and expected consumption.

The snag in the House was the price support level, which opponents of the farm bill feel is too high. Under Wednesday's procedure, no amendments were permitted. Under regular procedure the bill could be amended.

Tacticians of the bill hoped to get it through the House, with necessary revisions coming in the Senate-House conference committee.

Jackson said all Texas House Members, except BRUCE ALGER, the GOP member of the delegation, voted for the bill. The vote was 210 to 186.

RICE SITUATION

The prediction that rice growerr will vote down controls came from Marion C. Ulery, manager of the Federal Agriculture Stabilization and Conservation Office at Orange.

He said rice acreage already had been cut 40 percent since controls went into effect in 1954.

Ulery said ricegrowers still are optimistic "that no big cut will be ordered and we are making preliminary plans for next year on this basis."

He added that "I feel sure that if there is a drastic reduction the ricegrowers will vote against controls when the annual referendum is held the next time."

Orange County rice acreage dropped from 10,250 in 1954 to 6,000 this year, and rice leaders in Orange said the reduction has been general along the gulf coast.

Jackson, who also is chairman of the Statewide Cotton Committee of Texas, commented:

"We simply must have more cotton acreage to survive. Texas has a big stake in the result. This is not just a cotton problem, but it is a public problem, and the public better wake up to it.

"I supported the House Agriculture Committee and Speaker RAYBURN in the effort to pass a farm bill which was voted down Wednesday because I felt that represented the only assurance of getting a much-needed bill. What we wanted to do was send that bill to conference believing that proper adjustments could be made acceptable to all.

"URGES AGREEMENT

"Since the bill failed, we all hope and urge that some agreement can be reached to get a rule (of House procedure) so a farm bill can pass before adjournment.

"We cannot stand the terrific cut in acreage that confronts us without legislation. The Department of Agriculture has announced that the maximum acreage we can hope to receive next year is 13,675,000 acres under the present law. And the cotton industry just cannot exist as a major industry under that kind of acreage allotment. We feel therefore, that it is essential that Congress act and increase the acreage allotment."

Visit of Cured Cancer Congress to Gallery of United States Senate

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. NEUBERGER. Mr. President, one of the most inspiring and moving occasions in the recent history of the United States Senate was the presence in the Senate gallery on April 1, 1958, of some 40 delegates to the Cured Cancer Congress, which met in Washington, D. C. These brave and resourceful men and women were welcomed to the Senate gallery by the Senator who has done more for health and medical research than any other political figure of our time—the eminent senior Senator from Alabama [Mr. HILL].

A number of us on both sides of the aisle had the privilege of participating in Senator HILL'S greetings to people who are symbols that the most dreaded disease of our time can sometimes be coped with successfully, if it is detected early enough, and provided effective medical treatment is available from skilled doctors.

This inspiring event was described in detail in the summer, 1958, issue of Cancer News, which is the official periodical of the American Cancer Society. I ask unanimous consent that this entire article appear in the Appendix of the RECORD, under its heading "The First Cured Cancer Congress," and also that there be printed with it the address entitled "Toward a Common Purpose," with which Senator LISTER HILL presented the delegates of the American Cancer Society Cured Cancer Congress to the United States Senate on April 1.

There being no objection, the article and address were ordered to be printed in the RECORD, as follows:

THE FIRST CURED CANCER CONGRESS

(The place, United States Senate; the time, 3:30 p. m., April 1, 1958; the speaker, Senator LISTER HILL, of Alabama)

"Mr. President, it is my great privilege today to welcome to the Senate of the United States a group of men, women, and children who are living testimony of the great progress that has been made in the control of cancer during the past decade. These good people from all parts of the United States have survived the ordeal which has been fatal to so many others, and they visit us today as the Cured Cancer Congress of the American Cancer Society to enlist the American people in the cancer crusade."

As the Senator spoke, a vivacious 9-year-old gallery guest squeezed her mother's hand. A retired couple whose combined ages totaled 150 years exchanged happy glances. Senator HILL was talking about them and their fellow delegates to the 37-member Cured Cancer Congress. They were men, women, and children coming from all sections of the country; most had met for the first time the night before. But they were as old friends as they sat together in a spe-

cially reserved section of the Senate gallery. All listened closely to the remarks of Senator HILL and other Senators who spoke spontaneously from the Senate floor to help launch the Nation's annual Cancer Control Month, and the special guests had part of their reward when Senator HILL concluded on behalf of his colleagues and the Nation at large:

"We thank the Cured Cancer Congress for honoring us with their visit. They are an inspiration to those who sometimes despair at the magnitude of the cancer problem. They will inspire the American people to a greater participation than ever in the cancer crusade and I am confident that their example and their experience will give hope and confidence to millions of their fellow citizens."

Thus was keynoted the spirit of hope which the Cured Cancer Congress of the American Cancer Society, in first session convened, brought to the Nation's Capital to help open the 1958 crusade. They were 37 witnesses—living proof—that many types of cancer now are curable. They represented 800,000 other living Americans who have been saved from the disease. The delegates were selected by the divisions they represented, and afterward returned to their home States to help mobilize and spearhead local crusade activities.

The opening session of the Cured Cancer Congress had been called to order in the Federal Room of Washington's Statler Hotel at 8:30 that morning. Presiding was John Davis Larkins, Jr., of Trenton, N. C.—former State senator, political and civic leader, and longtime American Cancer Society volunteer who was successfully treated for skin cancer more than 5 years ago.

The Reverend Fritz O. Evers, of Baltimore, delegate from Maryland, led the invocation. In 1949, Pastor Evers saw his dentist for a routine checkup which led to a diagnosis of cancer of the left jaw, head, and neck. Surgery and radium saved his life. His inspiring prayer was heard by a hushed roomful of persons that included five youngsters all cured of cancer. Present also were newsmen and photographers from the local press and the wire services whose reports and special interviews would, within 24 hours, carry the story of this first Cured Cancer Congress across the Nation.

Members of the Congress itself were a varied group. They included a district judge, lawyers, doctors, housewives, a teacher, an engineer, a bricklayer and a former vaudeville team. Cheryl Lynn Cerjak, a starry-eyed 9-year-old from Beaver, Pa., was the youngest delegate. She told a reporter "I was sick * * * but I got well again." Mr. and Mrs. Frank Burt, of Brooklyn, N. Y., were the oldest delegates. He is 76, she 74. Mrs. Burt said: "Both of us had cancer and were cured. I was 59 when cancer struck. We are lucky to be here—together." Arthur Weidner, Jr., 34, of Bryn Mawr, Pa., felt the same way. So did his wife. He learned about his cancer just 7 weeks after their third child was born.

After a message of welcome from Calvin O. Klopp, M. D., president of the ACS District of Columbia Division, the delegates heard the society's president Lowell T. Coggeshall, M. D., report on progress in cancer control. Dr. Coggeshall noted that uterine cancer cures have helped cut the overall cancer death rate for women. "If every woman, once a year, would have a checkup, including the cell examination for uterine cancer—the Pap smear—we would come closer to eliminating uterine cancer as a cause of death." The society's president did not ignore the dark side of the picture either. Among men the cancer death rate has gone up, he said, mainly because of a 300 percent increase in deaths from lung cancer. He warned that if present rates continue some 50 million Americans will face cancer in their homes. He asked delegates to the Cured Congress to help save lives by bringing the facts about cancer to this "immense target audience that we must reach with a positive, hopeful message; we must educate them to sound health habits, to understanding attitudes toward illness and toward the medical profession; we must teach them cancer's seven danger signals and the value of checkups."

Dr. John R. Heller, director of the National Cancer Institute, told the group that "a milestone" had been reached on the long road to conquering cancer in that the first solid tumor apparently had been completely dissolved by a drug. Called methotrexate, the drug has been used in treating an extremely rare but almost invariably fatal type of cancer.

Maj. Gen. Edmond H. Leavey, the 1958 crusade chairman, called for "dedicated deeds and dollars" to help fight cancer. "Business may not be good in some parts of the country," he said, "but cancer is worse in any area of the country." General Leavey, president of the International Telephone & Telegraph Corp., urged corporations to double previous contributions.

During the talks a 10-year-old boy had been eagerly waiting his turn on the dais. It came at 10:05, when Marc Seamons, Cured Cancer delegate from Logan, Utah, walked up front, turned his back to the audience, sat down to the piano and played I Dreamed and Begin the Beguine, with the precision and fervor of a virtuoso. The youngster, blind in both eyes, had taught himself to play piano and organ from the age of four, after he had conquered cancer. Surgery saved his life.

Then, as its final act, the Cured Cancer Congress adopted a resolution urging the 800,000 Americans who have been saved from cancer to "mobilize in support of the 1958 Cancer Crusade; speak out about their personal victories; bring to the frightened the message of hope that early cancer can often be cured; urge all men and women to have an annual checkup; help raise the millions more needed for research, for service to help carry the burdens of patients and families, for spreading more life-saving facts through education." All delegates solemnly affixed their signatures and the first formal session of the first Cured Cancer Congress was adjourned.

The 37 delegates, led by a group of medical and lay leaders of the American Cancer Society, then went to the White House. Mrs. Dwight D. Eisenhower, honorary ACS crusade chairman for 5 years, received them in the rose garden. The 5 child delegates presented the First Lady with an 8-foot symbolic sword of hope. She flashed her famous smile, had a word for each of them, and to the group said: "It is such a pleasure and privilege to meet each and every one of you. * * * I wish I could do more. I avidly read everything I can get hold of on this." To the physicians in the group she said: "You have a wonderful cause."

At 12:15 the delegates were back at the Presidential Room of the Statler to attend the District of Columbia division's crusade kickoff luncheon. There they heard TV star Fran Allison in a dramatic narration, The Sword of Hope. Speaker was the division crusade chairman, Hugh McGowan, general traffic manager of the Chesapeake & Potomac Telephone Co.

Then came the visit to the Senate Chamber where the delegates were officially welcomed by Senator HILL. Most had already visited Senators and Representatives from their home States for a friendly chat. Some had also enjoyed an unexpected meeting with Vice President RICHARD M. NIXON.

Bricklayer George Koyne, of Chase, Md., visited with ex-bricklayer JOHN E. FOGARTY, Congressman from Rhode Island, and, like Senator HILL, a leader in health legislation. Mr. Koyne told Representative FOGARTY he was back laying bricks a month after his operation for cancer of the larynx. That was 8 years ago. Congressman FOGARTY showed his visitor a bricklayer's trowel which he keeps on his office desk. Mr. Koyne explained that the operation which saved his life removed his vocal cords but within 6 months he had learned how to speak again. "You can't stop an Irishman from talking," he told Representative FOGARTY.

Following Senator's HILL's introduction of the delegates and remarks to the Senate, eight other distinguished Members rose in turn to welcome the Cured Cancer Congress and to stress the urgency of support for more research. They were Senators HUBERT H. HUMPHREY, of Minnesota; RICHARD L. NEUBERGER, of Oregon; IRVING M. IVES, of New York; WILLIAM F. KNOWLAND, of California; JOHN J. SPARKMAN, of Alabama; CHARLES H. POTTER, of Michigan; EDWARD J. THYE, of MINNESOTA; and FREDERICK G. PAYNE, of Maine.

Senator NEUBERGER spoke of a relative who was stricken with cancer 20 years ago and made a complete recovery. He expressed admiration for the real valor of those who have faced the disease and conquered it. Describing a visit he and Mrs. Neuberger made to the Children's Cancer Research Foundation in Boston last summer, where Dr. Sidney Farber has over 350 children under treatment for cancer, the Senator said: "How shocked we were to learn something we had never realized, namely, that cancer kills more children under the age of 14 than any other single disease; and how startled we were to learn that cancer killed 6 times as many children as polio in the last year before the discovey of polio vaccine." Noting recent discussions in the Senate on Soviet propaganda victories in the field of nuclear weapons, Senator NEUBERGER said that if our scientists find a cure for cancer they will earn for America the gratitude of all mankind.

Along similar lines, Senator POTTER told the Senate: "If we spent as much money on research in connection with cancer as we spend on research, for example, in the military field, or if we spent even one-hundredth as much, I am confident we would make many breakthroughs. So far as leadership in the world is concerned, I am sure that we would be making a greater contribution to the world by a breakthrough in cancer, which is the kind of development that will save mankind, than we could possibly make by the launching of a satellite."

Senator SPARKMAN expressed appreciation for the visit of the Cured Cancer Congress, saying: "They are a demonstration of the fact that cancer can be cured. In the past cancer has been largely thought of—and it is even today thought of generally throughout the country—as incurable. The group in the gallery are a living demonstration of the fact that cancer is curable."

Senator KNOWLAND termed the visitors "an inspiration to the country, as well as to Congress." He said: "As a member of the Joint Committee on Atomic Energy I feel we are on the threshold of new horizons in this field, which will be a great help to mankind. It is of tremendous help to have in Washington persons who have been cured of cancer, as showing what progress has already been made and what our hopes are for the future."

Senator HUMPHREY expressed confidence that it will not be long before we have announcements of great discoveries such as we had in the field of polio research.

Senator IVES said that no family in America was immune from cancer, and that his own family has been hit several times.

Before the discussion ended, the Senators had recalled the names of honored and beloved colleagues lost to cancer: the late Senators Arthur Vandenberg, Brien McMahon, Robert A. Taft, Kenneth Wherry and, most recently, Matthew Neely. The recollection

cast a shadow over the session, but it also appeared to sharpen congressional determination to help wipe out cancer. It was late afternoon by the time the extraordinary Senate tribute ended.

Most of the Cured Cancer Congress delegates gathered afterward in the American Cancer Society staff room at the Statler Hotel, where national office personnel dispensed coffee and opportunity for reminiscence. "When I got home," and "starting tomorrow," were the pivotal points of many conversations going on in groups around the room. "Wonderful, inspiring," were the adjectives most frequently used to describe the day's events.

That evening members of the Cured Cancer Congress assembled at the Washington premier of South Pacific where a glittering first night audience watched Miss Allison push a button that lit the giant 30-foot sword of hope erected on Pennsylvania Avenue in the heart of the Nation's Capital. Within the hour following, delegates to the congress had started their homeward trek, by plane and train—37 ambassadors of hope who, in the words of their own resolution, were to "bring to the frightened the message of hope," and by their living example instill the hope that will lead to action.

A cancer victim says:

"I had cancer. I discovered its presence early. I was completely cured of it. And I have never made the slightest secret of it.

"This malady has been hedged about too long with the absurd belief that it is unmentionable. Let's break down the hedges. Let's discuss cancer as matter-of-factly as a broken leg.

"I don't know why this malady should be considered more disgraceful than whooping cough or stomach ulcers or heart disease. I do not know why any disease should be considered shocking. But if it is disgraceful to have cancer, then I am thoroughly disgraced in the eyes of my family and friends. And I have known more than a dozen other disgraceful cases. In my own family there have been three.

"The unmentionableness of cancer still claims too many victims. That's why I want to help the American Cancer Society's great educational message: You can have cancer—and live.

"To start where it all began: Cancer can so easily be an ending. When it isn't it is a brandnew beginning; you are born again.

"I was born for a second time in 1936.

"It was a warm, bright afternoon when cancer struck. Or rather when I discovered that it had struck, for the initial invasion of cancer is silent, painless, unwarning; that is the treachery and cruelty of this inscrutable disease. It hits anyone, anywhere, at any time. The fat and the slender; the strong and the sickly; the woman who overworks and the woman who doesn't work at all.

"No knowledge of hygiene can ward it off. I had been married for many years to a physician, and I was, myself, a graduate nurse. I had kept my weight reasonable and I had always been a strong woman, hardy enough to take long mountain hikes as well as to spend exhausting hours at my desk to meet an editor's deadline for a manuscript.

"If ever a woman seemed secure from illness that warm bright afternoon in 1936, it was I. I was enjoying the day and my favorite sport, fishing, when I felt a nagging pain. And then I discovered the lump in my breast.

"It was still tiny and that was lucky. But my recovery did not depend on luck; I acted without delay."

TOWARD A COMMON PURPOSE

(By the Honorable LISTER HILL, United States Senator from Alabama, chairman, Senate Appropriations Subcommittee on Health, Education, and Welfare)

(Following is the main body of the remarks of Senator HILL in presenting the American Cancer Society Cured Cancer Congress to the United States Senate on the opening of the 1958 crusade in Washington, D. C.)

The American Cancer Society has long been the partner of the Federal Government in the great and challenging problem of the cause and cure of cancer. Just as we in the Senate appropriate funds for cancer research each year, so, in a parallel effort, does the American Cancer Society raise funds from the general populace for the same purpose, and together the two efforts, well coordinated and complemented by private industry, move toward their common purpose.

The science of chemotherapy in cancer is the best example of how this three-pronged approach works. The Government, private industry, and the American Cancer Society are presently engaged in a coordinated crash program to test some 42,000 new chemicals each year in laboratories across the country. About 16 compounds are now in clinical use. They do not cure, but they do prolong life and relieve pain, often enabling thousands of cancer patients to lead useful, fairly normal lives. Only a few months ago came news of great importance. Massive doses of one of the new drugs have for the first time apparently succeeded in completely suppressing one rare type of cancer.

Virology and immunology are important new research fields. Nobel Prize winner Dr. Wendell Stanley holds that viruses provide the clue to cancer control. His work, and that of many other distinguished scientists, is based on the hypothesis that viruses cause most, if not all, types of cancer. Virology is one of the many research areas supported by the American Cancer Society.

Yes, research is moving ahead on many fronts. But there is another and not less important factor—people. Never has any population been so well informed about a disease and so active in the fight for conquering it as is true of the American people. A leader in all this is the American Cancer Society, which, through research, service, and education, wages an unrelenting battle against cancer. Two million Americans, men, and women in every walk of life—doctors, housewives, businessmen, professional workers, factory workers, industrialists—are banded together as dedicated volunteers of the American Cancer Society. They do the work. They will be satisfied with nothing less than total victory.

The goal of the American Cancer Society is threefold:

One, to save all the lives that can be saved within the limits of our present knowledge. This means the lives of 75,000 Americans who now die needlessly each year through fear, neglect, delay.

Two, to find cures for every type of cancer.

Three, and finally, to find cancer preventives, so that no man, woman, or child will ever have to know the fear and pain of cancer.

Cancer strikes in 2 out of 3 American families. It can strike in any home, at any time, and at any age. Few people realize that it is the No. 1 disease killer of our children. And it has, also, orphaned more children than we like to contemplate. There are today more than 300,000 children in the United States who have lost either a father or mother to cancer. In too many cases the parent they lost did not have to die. Early detection and treatment could have saved them.

We cannot have too much research, because we cannot get a cancer cure too soon. Each day gained means 700 lives saved. For this is the rate at which Americans are dying of cancer—700 a day, 365 days a year. This is why we need more and more research supported both by Government and by the American Cancer Society. And this is why we also need the society's life-saving service and education programs.

H. R. 13742, a Bill To Amend Title 28 of the United States Code

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. DENNISON. Mr. Speaker, I have today introduced a bill H. R. 13742 to amend title 28 of the United States Code so as to confer original jurisdiction on the district courts of the United States in any civil action to enjoin, suspend, or restrain the assessment, levy, or collection of a tax of a local government of a State without regard to the sum or value of the matter in controversy. This jurisdiction is exercisable if two conditions are satisfied, first, that there is diversity of citizenship between parties to the action, and second, that the action arises under the Constitution, laws, or treaties of the United States. An added feature of the bill provides that the prevailing party in any such action may be awarded costs, including reasonable attorney's fees.

The need for this legislation has been indicated for some time. It has increasingly become the habit of municipal corporations and local political subdivisions to levy taxes on many different kinds of activities within their jurisdiction. As the need grows for greater community services, the imagination and perseverance of local taxing bodies is stimulated.

One device is levying license or privilege taxes for the conduct of a trade, vocation, profession, or business. Some of these are levied on a flat, annual rate, and others on a percentage of profits basis.

Often such taxes, although not large in dollar value, becomes a very real burden to a person or association outside the community and State, particularly when engaged in similar activities in many, many other communities.

Of course, it is axiomatic that when an out-of-State business concern is so taxed, any undue or discriminatory burden upon commerce is forbidden. A State, under the commerce clause of the Constitution, cannot put a barrier around its borders and may not interfere with the constitutional power of the Congress to regulate commerce with foreign nations, and among the several States. Such a prohibition may not be accomplished in the guise of tax-

ation if it produces an excluding or discriminatory effect.

A recent case, *West Point Wholesale Grocery Co.* v. *City of Opelika, Ala.* (354 U. S. 390), is a case in point. Under an ordinance of the city of Opelika, an annual privilege tax of $250 was required to be paid by any firm engaged in the wholesale grocery business which delivered groceries at wholesale within the city from points outside the city. The West Point Wholesale Grocery Co. was a Georgia corporation, and except for the solicitation of orders and delivery of goods had no other contact with the city of Opelika, Ala. Notwithstanding the foregoing and the previous decisions of the Supreme Court in the cases of *Nippert* v. *City of Richmond* (327 U. S. 416), and *Memphis Steam Laundry Cleaner, Inc.* v. *Stone* (342 U. S. 389), holding such a tax to be unconstitutional, the city of Opelika proceeded to assess and collect the tax from West Point.

Under the law as it exists, the West Point Wholesale Grocery Co. could not file suit either in the State or Federal court to enjoin the assessment or collection of the tax. Its only recaurse was to pay the tax, which was obviously unconstitutionally levied, and sue in the State court to recover. In this case the amount was $250. Thus West Point Wholesale Grocery had to go through the State courts and ultimately appeal to the Supreme Court of the United States before it could invoke the jurisdiction of any Federal court, and this in a case in which a question involving the Constitution of the United States was the sole point in issue.

Now it is possible that the same or similar tax could be levied in the next year, again requiring the taxpayer to proceed in the same manner through the State courts to the Supreme Court. It is not the $250 in the West Point case that is important, but rather the cumulative effect of taxes upon such an out-of-State business over an extended period of time that causes the trouble. As was stated in *Nippert* v. *City of Richmond*, supra, pages 429–431:

> But the cumulative effect, practically speaking, of flat municipal taxes laid in succession upon the itinerant merchant as he passes from town to town is obviously greater than that of any tax of statewide application likely to be laid by the legislature itself. And it is almost as obvious that the cumulative burden will be felt more strongly by the out-of-State itinerant than by the one who confines his movement within the State or the salesman who operates within a single community or only a few. The drummer or salesman whose business requires him to move from place to place, exhausting his market at each periodic visit or conducting his business in more sporadic fashion with reference to particular localities, would find the cumulative burden of the Richmond type of tax eating away all possible return from his selling. A day here, a day there, 5 days now and 5 days a year or several months later, with a flat license tax annually imposed lacking any proportion to the number or length of visits or the volume of the business or return, can only mean the stoppage of a large amount of commerce which would be carried on either in the absence of the tax or under the incidence of one taking account of these variations.

To subject any out-of-State business to such a burden is a costly procedure and does not afford the taxpayer a permanent and adequate remedy. It should be pointed out that the delay caused by the necessity of suit in State courts and subsequent appeal from court to court and finally to the Supreme Court is in itself a burden on interstate commerce.

The only method by which the free flow of commerce can be maintained against the unconstitutional levy of local taxes is by according one so engaged in interstate commerce prompt and permanent relief without harassment and undue delay. Federal courts should be given jurisdiction over this Federal problem.

This is the purpose of the bill which I have introduced.

Librarians for Education Bill

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution on the National Defense Education Act of 1958, adopted by the American Library Association on July 17, 1958, at Los Angeles.

Mr. President, these librarians work closely with the students and educators. They know their needs, and they know the necessity for the elevation of educational standards, sought in the National Defense Education Act of 1958. As a coauthor of this bill, I welcome this endorsement of it by American librarians.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON THE NATIONAL DEFENSE EDUCATION ACT OF 1958 ADOPTED BY THE AMERICAN LIBRARY ASSOCIATION, JULY 17, 1958

Whereas the American Library Association has an established policy in support of Federal aid to public education without Federal control in order to assist the States and their subdivisions to establish and maintain adequate educational facilities;

Whereas the National Defense Education Act of 1958 aims to provide scholarship loans to individuals for study at institutions of higher education; grants to the States to strengthen science, mathematics, and modern foreign language instruction in schools; a substantial program of graduate fellowships to encourage individuals to train for a teaching career in our universities and colleges, and authorizes an annual appropriation for research and experimentation in more effective utilization of television, radio, motion pictures, and related mediums for educational purposes;

Whereas the broad program encompassed by this legislation has wide implications for the libraries whose interests it touches at every major point: Therefore be it

Resolved, That the members of the American Library Association at their annual conference at San Francisco, Calif., on July 17, 1958, recommend to the 85th Congress, sitting in its 2d session, that it enact the National Defense Education Act of 1958; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to all Members of the Congress, to the Secretary of the Department of Health, Education, and Welfare, and to the United States Commissioner of Education.

Proceedings Against Bernard Goldfine

SPEECH
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. MEADER. Mr. Speaker, my interest in this resolution lies, not in Mr. Goldfine, nor the performance of the Legislative Oversight Subcommittee of the House Interstate and Foreign Commerce Committee, but in the powers of the House and their exercise.

I have often spoken on the investigative power of the Congress and the importance of the factfinding function of committees in forming a firm foundation for sound and intelligent legislation.

I shall vote for the resolution and uphold the power of the committee and the House to obtain the information Mr. Goldfine defiantly and contumaciously refused to give on a subject within the scope of the committee's inquiry.

I disapprove, however, the method employed by the committee to compel obedience. We are calling upon the executive—the United States district attorney—and the courts to do, under section 102 of the Revised Statutes, the task we ought to do ourselves.

The House has ample power to bring contumacious witnesses before it, interrogate them on the subjects deemed of importance to the legislative process and, if they defy the House, punish them for such defiance.

The considerations and reasoning in such an exercise of the investigative authority of the Congress—so necessary to enlightened lawmaking—are brilliantly set forth in a law review article by Gerald Morgan, presently the President's special counsel, which I inserted in the CONGRESSIONAL RECORD of July 14, 1958, at pages 12521–12526.

Turning over our task of enforcing our powers to the executive and judiciary branches of the Government is simply one more indication of the weakness and low estate of the Congress today.

Actually, however, it is more than that. Section 102 of the Revised Statutes expressly makes pertinence "to the question under inquiry" an element of the crime. Thus it calls upon the courts to make a legislative decision, namely, what facts, or what opinions, have a bearing or influence upon the determination of legislative policy. That is our task, not one for the court.

Curiously, the resolution before us contains no phraseology reciting a legislative finding or judgment that the

information sought by the questions Mr. Goldfine refused to answer were pertinent, relevant or "germane" to the subject of the subcommittee's inquiry. The committee's report did assert relevancy, but the House merely received the report; it did not adopt it.

Regardless of the report or the absence of a finding of relevancy by the House, section 102 of the Revised Statutes by its terms imposes upon the prosecution the duty of proving "pertinency" of the questions, as all other elements of a crime, "beyond a reasonable doubt."

Thus, the executive branch is to undertake to present to a grand jury and a court a legislative proposition; namely, what circumstances or set of facts might induce the Congress to legislate or to refrain from legislating. That proposition is one peculiarly within the province of the legislative body—not the executive—not the judiciary.

Section 102 of the Revised Statutes was enacted in 1857. However, for almost 40 years thereafter the House and the Senate continued to try contempt charges themselves. In 1894 charges against Elisha Edwards and Elverton R. Chapman were certified to the United States attorney under section 102 of the Revised Statutes. The latter was the first indictment under this law.

Between 1894 and 1940 contempt charges were increasingly referred to the United States attorney and the courts. Some notable contempt cases, however, were tried in that interval by the House and by the Senate. Since 1940 all contempt charges have been certified under section 102 of the Revised Statutes, and the House and the Senate have failed to exercise their inherent powers to punish witnesses for contempt. This history of the punishment of contempt of Congress is a mute but eloquent index of the state to which the Congress has sunk—that we should send others to do our chores and be bound by their actions.

In the process the vigor of the investigative power of the Congress has been weakened. Witnesses have escaped punishment, and precedents have been established which seem to hinder and limit the factfinding power of the Congress.

I hope in future instances of defiance of committee inquiries the House will assert the powers it possesses and proceed to deal directly and effectively with those who flout its orders and seek to obstruct its processes.

In Memory of the Honorable Bill McVey

SPEECH
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. HORAN. Mr. Speaker, I, too, wish to join my colleagues in paying tribute to our departed associate, WILLIAM E. MCVEY.

No more kindly and considerate Member ever served in this body. He was constant in his work both in committee and on the floor of the House. His was a useful life both as an educator and as a legislator.

I want to join others in expressing our sympathies to the McVey family.

Will Ike Permit Kremlin To Take Nuclear Lead?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. DINGELL. Mr. Speaker, a distinguished columnist, Mr. Joseph Alsop, has been commenting in a series of articles on America's woeful unpreparedness in the field of missiles, both offensive and defensive. One of the most frightening articles of the series was printed in the Detroit (Mich.) Free Press of Monday, August 4, 1958.

I think it is particularly important that the Congress and the American people should be aware of the situation as it now exists and will worsen in the future.

I hope all Members of Congress will read this splendid article and will become aware of the grave danger faced by the United States during the next few years:

WILL IKE PERMIT KREMLIN TO TAKE NUCLEAR LEAD?

(By Joseph Alsop)

WASHINGTON.—It is now the Eisenhower administration's policy to permit the Kremlin to gain an overwhelming superiority of nuclear striking power in the next 5 years. This is the true, though unadmitted, response to the warning of the sputniks.

The terrible facts that support the foregoing terrible charge have already been printed. These facts in turn quite obviously pose a further question.

How can the administration possibly be pursuing such a policy, 8 months after the sputniks' clear warning?

All sorts of extraneous factors enter into the answer.

The most important, certainly, is the capture of the President's mind by former Secretary of the Treasury George Magoffin Humphrey. Humphrey taught Eisenhower to fear loose or burdensome fiscal measures more than he fears the armed might of the Kremlin.

But no President could cling to this system of priority—not even a President so protected from the terrible facts as Dwight D. Eisenhower—if he did not have some veil of military argument to cast over the hideous reality. The veil currently being used is the theory of overkill.

This theory has been put forward by the Army and Navy, in order to protect their own appropriations from the competition of the needed vast expenditures to strengthen our nuclear deterrent.

What, then, is this theory of overkill? In essence, it is the argument that you do not need the power to overkill, if you already have H-bombs and the means to deliver them in quantities sufficient to destroy the Soviet Union.

Being childishly simple, it sounds convincing. This is nonsense, all the same, because it slurs over the operational realities and altogether ignores the political-psychological realities. The operational realities may be summarized as follows:

First, the Kremlin is not deterred from attacking the United States by any simple computation of American nuclear striking power. What deters the Kremlin is a computation of the balance between their power and our power.

In particular, the Kremlin is continuously computing how much American nuclear striking power will probably survive a first blow by Soviet nuclear striking power. This part of our striking power that will survive the first blow is the true and only deterrent.

As the balance tilts toward unchallengeable Soviet superiority during the next 5 years, the part of our striking power that will survive a first blow must also diminish.

This rate by which our true and only deterrent will weaken is affected by many special factors.

Ever since the sputniks, for example, the Strategic Air Command has kept one-third of its aircraft either in the air or on 15-minute alerts, in order to make sure that at least a third of its strength will survive the first blow by the Soviets.

But this survival force cannot strike back without the complexly coordinated support of the air-tanker fleet. It will surely be disorganized by the effect of the first blow on SAC's nerve centers.

Picture the Kremlin with 1,000 to 2,000 intercontinental ballistic missiles; with 1,000 to 2,000 shorter range missiles neutralizing our overseas airbases; with a vast network of air defense to withstand our manned bombers that survive the first blow; and with a substantial manned bomber force of their own for the precision jobs.

What will the Kremlin then do?

And how shall we respond to Kremlin threat, when we have a proud total of 130 intercontinental ballistic missiles, against 2,000 Soviet ICBM's.

That will be one item in the dreadful balance sheet of 1962–63; so how will it affect our actions?

This administration ought to know the probable answers to these psychological-political questions, after the great Middle Eastern catastrophes.

Hon. William S. Hill

SPEECH
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. FISHER. Mr. Speaker, it is unfortunate for the country that our colleague BILL HILL, of Colorado, is retiring from Congress at the end of the present session. After 18 years of distinguished service he has chosen to voluntarily retire from the Washington scene.

BILL HILL is one of the most amiable and sincere men I have known during the 16 years of my service here. He has served his district well, and he has served the Nation well. As a ranking member on the Agriculture Committee he has for many years been a leading voice in legislation affecting woolgrowers and livestock raisers. BILL HILL has always been found up on the front lines in every battle that has been waged in behalf of

the legitimate rights and interests of the American woolgrower.

Aside from his congressional work in the field of agriculture, BILL HILL has achieved an enviable record for economy in Government, and for maintaining the fundamentals of our American institutions. He has not been hoodwinked by the voice of the Socialists and do-gooders. He has held firm to his convictions and has always put the welfare of the country first.

I can hardly think of a man who is more respected by his colleagues, both Republican and Democratic, than is BILL HILL. And I can hardly think of one who is more deserving of that respect. As this session nears its end and the packing begins, I extend to my friend BILL HILL my own appreciation for the good fight he has made for better government, and my best wishes for a happy and pleasant future. He and his family deserve the best.

The Late Honorable Augustus Owsley Stanley

SPEECH
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WATTS. Mr. Speaker, the death of the Honorable Augustus Owsley Stanley will be mourned by all Kentuckians and all Americans.

Blessed with ability in many fields, his outstanding characteristic was his love of his fellow man. This trait predominated his actions throughout his political life. Etched upon the books of both the State of Kentucky and our National Government, are actions resulting from this great man's efforts from which we all have benefited.

Pioneer in the field of humanitarian legislation, the turn of events have proven his wisdom and foresight. His was the true philosophy of government for the people.

Prior to his coming to the Congress in 1903, Owsley Stanley's name had become linked with good government. His charitableness and his graciousness became so widespread that his fellow Kentuckians called upon him to represent them in the halls of the United States Congress in 1903. In this office he served until 1915. Throughout this service these principles predominated.

In the year 1915 the folks of Kentucky called him to serve as their chief executive. In this capacity he served faithfully and well through 1919. In this office he remained steadfast to these principles and objectives. Written on the books in old Kentucky history is the record that his was an administration for the people.

Following this service, Kentuckians demanded further of his time and his ability. They elected him to the United States Senate, in which office he served ably and faithfully through 1925. Because the administration in power was of opposite political faith, the voice of Owsley Stanley was in the minority. Nevertheless, here, too, he etched an enviable record, the course of which was charted upon the seas he so well knew—government for the people.

Governor Stanley, fortunately, lived to see many of the principles for which he stood—and oftentimes apparently stood alone—written upon the books. No one received greater joy and greater pleasure than Governor Stanley did when the Federal Government, through the Congress, recognized its obligation to the disabled, the lame and the blind, the poor and the suffering, and others in distress.

Governor Stanley's passing is truly a passing of an era. All will miss him because he was a friend to all. I extend to his widow and his family my sincere sympathy.

Why Ike Opposes Blatnik Bill

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ROOSEVELT. Mr. Speaker, the House recently made an important contribution to the eventual solution of the problem of water supply when it passed a bill to direct the construction of plants to convert brackish water to fresh water. It would indeed be shortsighted not to work in the direction of real progress to eliminate water pollution. The efforts of our colleague, JOHN BLATNIK, and the difficulties that he has had in securing action on his bill to expand the water pollution control program are pointed out in an editorial from the August 16 edition of Labor. Under leave to extend my remarks I include it in the RECORD, as follows:

WHY IKE OPPOSES BLATNIK BILL

Is the Eisenhower administration against cleaning up America's polluted rivers because that would adversely affect the selfish interests of some big industrialists? Facts strongly supporting an affirmative answer to that question are given in an article in the conservative Business Week magazine.

It points out that Congressman JOHN A. BLATNIK, Democrat, of Minnesota, is pushing for passage of a bill which would broaden Federal aid for sewage cleanup projects. In other words, it would continue and expand the water pollution control program BLATNIK put through Congress 2 years ago, despite, as the magazine says, "strong opposition" from the Eisenhower administration.

The present Blatnik bill, the article points out, is backed by city officials and wildlife protection societies, because the smaller program in the past 2 years has proved a great success. By having Uncle Sam contribute comparatively small amounts to local sewage treatment projects, it has stimulated $351 million in city spending on new or improved water treatment plants, a 40 percent increase over the spending average of the previous 5 years.

That part of the program, the Business magazine says, "has grabbed most of the headlines," but there is another part. The Blatnik law "gave the Government stronger powers to crack down on municipal and industrial polluters of interstate streams.

"This new enforcement authority," the articles continues, "has been used in a score of cases to prod State pollution control agencies into revitalizing their moribund programs against stream polluters." As a result, some big industrialists fear they will have to stop pouring their poisonous and filthy wastes into the Nation's streams.

If that isn't why the Eisenhower administration opposed the original Blatnik program, and now opposes its expansion, what is the reason?

Guy Harvey Cited for His 20 Years Service as State Chairman of March of Dimes

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. McGOVERN. Mr. Speaker, one of the most remarkable men I have been privileged to know is Mr. Guy Harvey, of Yankton, S. Dak. In addition to many crowded years of unusually active participation in the fraternal, civic, and political life of his community and State, Mr. Harvey has established a nationwide reputation for his work as a State March of Dimes chairman.

One of only three remaining State chairmen appointed personally by the late President Franklin Roosevelt, Mr. Harvey was recently honored with a special dinner and a plaque in recognition of his 20 years of service to the March of Dimes. It is difficult for one to imagine a more worthwhile investment of time and energy than the inspiring leadership that Mr. Harvey has given to the great work of the National Foundation for Infantile Paralysis. It was my privilege to serve as director of the March of Dimes in Davison County for 2 years under the direction of State Chairman Harvey. As his colleague, admirer, and friend I salute Guy Harvey on the occasion of his 20th anniversary with the March of Dimes.

I include at this point a news account from the August 11, 1958, issue of the Yankton Press and Dakotan:

"One of the outstanding records of service to mankind," stated Basil O'Connor, president of the national foundation, in honoring Guy Harvey of Yankton upon completion of 20 years as State volunteer chairman for the March of Dimes.

Harvey's service as a volunteer leader in the State has been instrumental in raising nearly $2½ million as a weapon in the national foundation's fight against polio. For many years the only known relief against a devastating crippler was insignificant attempts to thwart the disease.

However, with the increased attack backed by the national foundation, treatment centers were set up, iron lungs were developed, professional education was advanced, and finally a successful prevention was discovered by Dr. Jonas Salk.

Through these milestones Harvey was instrumental in South Dakota in aiding the many struck down by polio. During epidemics his desk in Yankton was cascaded by the numerous requests for financial aid,

families whose plight was always answered by ceaseless hours of dedication to a cause.

Of the many State chairmen appointed personally by the late Franklin Roosevelt, founder of the national foundation, Harvey is 1 of 3 chairmen still presiding, the others having retired or are deceased.

In accepting the honor, Harvey announced that his activities on behalf of the expanded programs of the national foundation, which is entering the fields of arthritis, rheumatism and birth defects, "will continue so long as the good Lord wills."

Mrs. D. L. Corning of Sioux Falls has been reappointed volunteer South Dakota adviser on women's activities for the national foundation, it was announced today by O'Connor.

Volunteer advisers on women's activities face the challenging task of interpreting the comprehensive programs and coordinating efforts of local chapters to develop long-range patient-aid services. Simultaneously they will encourage completion of all-out all-ages polio vaccination programs in all communities. Working closely with women's clubs and organizations, advisers will seek leadership cooperation to increase public understanding of the enlarged health programs. They will also participate in early planning for the 1959 March of Dimes which will initiate and finance the national foundation's expanded attack on disease and disability.

Mrs. Corning, chairman of a PTA study group for 2 years, is a member of the Fighter Squadron Wives. She also serves with the staff and office committee for the Girl Scout area office.

Commissioner Henry J. Clay

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. WAINWRIGHT. Mr. Speaker, 4½ years ago an able, young lawyer offered his services to the Eisenhower administration. Today Henry J. Clay is resigning from the Foreign Claims Settlement Commission of the United States.

Commissioner Clay was highly suited for the task he has so well performed. He is a graduate of the Taft School in Middletown, Conn., a graduate of Union College and the University of Virginia Law School. After having made an outstanding record as a practicing attorney in New York City he volunteered his services to the Federal Government. He was a former Chairman of the International Claims Commission. When this Commission was merged with the Foreign Claims Settlement Commission of the United States he became its most experienced member.

Many members of the bar of the various States who have appeared before Commissioner Clay have expressed themselves on not only his ability but his courtesy and fair treatment.

I speak for many Members of Congress in expressing the deepest regret that he has chosen to withdraw from Federal service. It is understandable, however, that his public service could not continue forever due to personal commitments and a large young family. We wish him well.

A Tribute to Congressman Ralph W. Gwinn

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. DOOLEY, Mr. Speaker, in my humble opinion no Representative has served his country and his constituency more devotedly or constantly than RALPH GWINN of the 27th District of New York. While I am not and have not been in agreement with his economic philosophy through the years of his distinguished service to his people, I never could question his deep sincerity or his complete dedication to the high responsibilities of his position as a Congressman.

A man of courage, of gentle mien, of soul searching spirituality, RALPH GWINN is beloved by all who know him and admired greatly even by those who are in disagreement with his views.

His retirement from Congress this year will take from the House a needed balance-wheel and stabilizing influence. He will be sorely missed by his colleagues, all of whom respect him for his dedicated service and kindly nature.

Following is an article by a distinguished columnist of the San Francisco Daily Chronicle News, which appeared in that newspaper recently and which sums up eloquently the many admirable virtues of Congressman GWINN:

AS I SEE IT
(By Hugh Russell Fraser)

There are few men I hold in greater regard than John Fischer, editor of Harpers.

He is, without question, editing the most brilliant magazine now published in America.

His versatility, his keenness of perception, his disciplined love of the truth, his enormous and exuberant curiousity—all expressed in his writing, and in his judgment of articles—can only be compared with that of the late Harold Ross, editor of the New Yorker.

He is doing a top job.

But John Fischer can, as I see it, be capable of something he would not want to be incapable of—namely, injustice.

In the current issue he has a blistering attack, under his own name, on Representative RALPH W. GWINN, Republican, of New York. In his perceptive way he all but demolishes the Congressman from Bronxville, and when John Fischer demolishes anybody, he usually stays demolished.

Therefore, it is with great deference to the distinguished district attorney that I rise as counsel for the defense.

I do so humbly, and with no little trembling, as I doubt if I can sway the jury.

Yet, as I arise I ask the indulgence of the court. For I defend a man whose political views I do not agree with, whose record may rightly be regarded, as John Fischer puts it, one of the 19th century and "the economics of John Stuart Mill."

Yet I must say this is only part of the story.

There is another side. There is something to be said for this 74-year-old man who, personally, is the soul of love, who honestly and humbly shares with T. Jefferson the moss-covered doctrine that "the best government is that which governs the least," and with whom you cannot converse 5 minutes without realizing that, from a standpoint of character, he is a better man than you are.

Or at least than I am.

Of how many Members of Congress can one say this? Or at least of one whose political views you do not share?

Indeed, the essential nobility of the man is such that during the many hours I have conversed with him, in his office, dining alone with him in the Republican Club, in his home, on the street, I have always been reminded of Emerson's famous dictum:

"What you are speaks so loud I cannot hear what you say."

Indeed, I am a better man for having known RALPH W. GWINN. But it is not on that ground I defend him. I defend him on the one outstanding part of his political philosophy I do agree with.

Namely, that unique plank in his platform on which he always ran for Congress: the reform of the United States Office of Education and the return of it to its lawful function.

Here he was on solid ground, because for over 30 years that function has been ignored.

I know. I used to be on the staff of the United States Office of Education. I saw the law being by-passed and treated with contempt every day. I resigned in protest against it.

I carried my protest to the House of Representatives and had Mr. GWINN's immediate cooperation.

It was Mr. GWINN who led the fight on former Commissioner of Education John W. Studebaker; it was Mr. GWINN who showed that Mr. Studebaker was publishing handsome and costly booklets on the status of education in Yugoslavia and Poland and Panama, but not one word on the status of American history in the secondary schools of the United States; it was Mr. GWINN who year in and year out demanded, and secured, an investigation of this gross and incredible fraud on the American people; it was Mr. GWINN who has successful each year in lopping off thousands of dollars that might otherwise have been appropriated for silly and ridiculous projects in bureaucratic office; it was Mr. GWINN, coming from Bronxville, which happens to have one of the best elementary and secondary school systems in the United States, who did his best to awaken his colleagues to the danger—indeed, the peril—of Federal interference in the local matter of education.

Mr. Fischer may not know it, and indeed I do not want to offend him, but as Mr. GWINN spoke on the floor of the House, I did not see anybody walk out. I saw something that—at least in my mind's eye—would have surprised Mr. Fischer.

One day, as he spoke, I saw Thomas Jefferson walk slowly down the center aisle and stand quietly behind him, listening with rapt attention as he talked in that voice of love and compassion, denouncing those who were defiling the Temple of Education.

Then, as he finished, I saw Patrick Henry come in suddenly, stride down the aisle, with a bow to Jefferson, take over the lectern and with that eloquence which only Patrick Henry knew how to give, start slowly and solemnly:

"Listen, all who are yet free, you have just heard the voice of the Founding Fathers. I say also * * *"

There was something spellbinding in the way Mr. Henry gestured with his arms. His voice rang out, and he electrified every man within range. And then the applause came. It was deafening. I remember standing up, the thrill of being an American pounding through me.

And, suddenly, Mr. Henry was gone. And there was standing there only the spare, gaunt figure of RALPH W. GWINN of New York.

Yet I am glad, because I knew Mr. GWINN. I did not know, in a personal way, those in whose behalf he spoke. But I knew he was not alone.

Mr. Fischer says that the Republican bosses of Westchester and Putnam Counties have retired Mr. GWINN.

Let us hope, if this is true, they have not also retired Mr. Jefferson and Mr. Henry.

Congressman Timothy P. Sheehan Devoted to the Polish Cause

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. SADLAK. Mr. Speaker, TIMOTHY P. SHEEHAN, our colleague from the 11th District on the Northwest Side of the city of Chicago, is recognized as one of the outstanding fighters in behalf of Poland's struggle for freedom.

Ever since Congressman SHEEHAN came to Congress in January 1951, he has maintained an active interest in Poland's cause. Through the years, this interest and dedication has never diminished and I know that all citizens of Polish ancestry join with me in recognizing and lauding him for the time and effort he has given to Poland.

Soon after Congressman SHEEHAN came to Congress in 1951, he was the first Member of Congress to introduce a resolution in the 82d Congress to investigate the Katyn Forest massacre. After the resolution was adopted, he served on the special Katyn Investigating Committee. The whole world knows of the accomplishments of this investigation.

For TIM SHEEHAN'S work on this Katyn Investigating Committee, our colleague received the Polonia Restituta Award from the Polish Government-in-exile and also is the recipient of a citation from the Polish Army Veterans of America.

During 1956, Congressman SHEEHAN introduced two resolutions in the Congress dealing with the Poznan uprising which caused President August Zaleski of the Polish Government-in-exile to write:

I wish to offer to you my heartfelt thanks for this generous gesture.

Since the initiative you have taken in the question of the Katyn Forest massacre, I have been following with great interest your activities on behalf of my country and I can assure you that I am expressing the opinion of all patriotic Poles when I express to you their gratitude.

I am, sir,

Yours very sincerely,

AUGUST ZALESKI.

Recently, in a speech in the House of Representatives, commenting on the 15th anniversary of the discovery of the Katyn graves, our colleague brought to the attention of the people of our country facts about the present Russian Ambassador to the United States, Mikhail Menshikov, who, when in charge of the distribution of allied food and supplies in Poland right after World War II, made this distribution not to needy Poles but to those card-carrying Communist members in strict solidarity with the party line.

The Polish daily, Dziennik Chicagoski, stated editorially that—

We cannot fight our friends—one of whom is Congressman TIMOTHY P. SHEEHAN.

In another editorial, Dziennik Chicagoski stated that—

American Poles should not disregard Congressmen of non-Polish descent, who are favorably disposed toward our problems and objectives.

People of non-Polish descent, who honestly cooperate with us, are needed in the various public offices as much as our compatriots. Congressman TIMOTHY P. SHEEHAN, a Representative of the 11th District of Chicago, is one of those people who, although alien to us, is completely devoted to the Polish cause. He is a Republican, but, at the same time, a poised man who fully realized that, very often, in advocating a just cause, party lines must be crossed and one has to vote according to the conscience of an honest citizen.

Congressman SHEEHAN has gained the very best reputation among the American Poles of Chicago. We can state here that in every problem of general Polish or American-Polish character we can always count on Mr. SHEEHAN'S splendid suggestions or advice.

From the Katyn committee on, of which he was an active member from the beginning to the end, no Polish problem has ever been indifferent or alien to Congressman SHEEHAN.

On Congressman SHEEHAN'S record of supporting his constituency, and on the basis of his wholehearted support and aid for the Polish cause, all citizens of Polish descent should give earnest consideration to the interest which he has demonstrated through the years in the fight for Poland's freedom and for his close attention to the affairs of Polonia here in America.

Showdown in Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of August 12, 1958:

SHOWDOWN IN POLAND

The battle has been joined again in Poland. Accepting the challenge of the Red regime in raiding the monastery of Jasna Gora in the holy city of Czestochowa, the Polish primate, Stefan Cardinal Wyszynski, has ordered special prayers daily for 3 months. Moreover, without any directive, thousands of Poles already are marching to Czestochowa to participate in a religious demonstration on Friday in connection with the observance of the Feast of the Assumption of the Virgin Mary who is regarded as the Queen of Poland.

On the other hand, the Communist government in Warsaw, under the lash of Moscow, is stepping up its attacks on the cardinal and the church, possibly setting the stage for a new showdown. It is a fateful step for the government because the Poles are a religious and patriotic people and they have demonstrated repeatedly they possess the courage of their convictions despite the power of the Red usurpers.

This is a dramatic moment in the history of Poland and the world, as the forces of good and evil face each other in this enslaved land with its proud traditions of freedom.

It would be difficult to think of anything more to arouse the Poles than the raid of Jasna Gora which is identified with some of the most stirring chapters in the history of Poland, combining religion and patriotism. It is a shrine that occupies a peculiar place in the life of the Polish people. It is here that the primate of Poland maintains his headquarters, symbolizing Polish fervor and, if need be, sacrifice.

It is coincidence that this test should come at a time when the August holy days, focusing attention on Czestochowa, are at hand. The Communists cannot be unaware of the risk they take.

There will be millions of Americans who will add their prayers to the supplications of the people of Poland to surmount the obstacles in the difficult days immediately ahead.

More on the Bang-Jensen Case

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. BECKER. Mr. Speaker, I wish to recommend to the further attention of all another article from the Brooklyn Tablet under date of August 2, 1958, on the Bang-Jensen case. I assure you that this is worth reading:

UNITED STATES, WITHOUT PROOF, HITS BANG-JENSEN—UNITED STATES DEPUTY SECRETARY FINDS U. N. FULLY JUSTIFIED IN DISMISSING ANTI-RED—IGNORES FACTS, THOUGH—INACCURACIES AND OMISSIONS IN OFFICIAL UNITED STATES STAND ARE POINTED OUT

(By Don Zirkel)

The United States has officially (and without proof) announced that United Nations Secretary General Dag Hammarskjold was fully justified in dismissing Povl Bang-Jensen, Deputy Secretary of the U. N. Special Committee on Hungary.

That information is contained in a statement sent to American citizens who have protested the mishandling of the case. The statement, signed by James J. Wadsworth, Deputy United States representative to the U. N., does not answer Mr. Bang-Jensen's charges.

LODGE AID LAUDS LODGE

It says Ambassador to the United Nations Henry Cabot Lodge "left no stone unturned to see to it that the anonymity of the Hungarian witnesses should be preserved and that thereby they and their relatives could be protected against Communist reprisals.

"His efforts were completely successful," Mr. Wadsworth proudly announces, with this explanation:

"The Secretary General gave Mr. Lodge definite assurance that the secrecy of these documents would be kept totally inviolate in his possession. • • • Mr. Lodge was fully satisfied with this assurance."

Neither Mr. Hammarskjold, Mr. Lodge, nor Mr. Wadsworth have explained how the witnesses "could be protected against Commu-

nist reprisals" by turning their names over to Communist agents.

But the head of the Department of Political and Security Council Affairs, among whose duties is custodian of documents including names of witnesses and other top-secret information, was Dragoslav Protitch, a Yugoslav. He has since been demoted, possibly for his lack of full cooperation in the drive to get Mr. Bang-Jensen, and the documents in his safe turned over to his successor, Anatoly Drobynin, a Russian.

U. N.'S PERFECT RECORD EXPOSED

The Secretary-General pointed out, Mr. Wadsworth assures the United States citizens who have written to Mr. Lodge, "that during the 12 years the United Nations has been in existence, secret material has been kept absolutely secure under the jurisdiction of the Secretary General."

Of course there would be positively no way to prove that secret documents were never taken from the Secretary General's files, photographed and returned.

The Secretary-General's experiences with Mr. Bang-Jensen only serve to prove he does not have complete and continuous control of U. N. documents.

More specifically, apparently neither Mr. Hammarskjold, Mr. Lodge nor Mr. Wadsworth remember back to last December, when the same Mr. Hammarskjold announced the termination of employment of a Ceylonese U. N. worker for delivering verbatim testimony from the same Hungarian Special Committee to a member of the Soviet delegation.

At least the Secretary-General should have remembered because of the link between that case and Mr. Bang-Jensen's.

The Ceylonese employee's offense had been exposed many months before and then generally forgotten. It was recalled by a question in the first press conference after Mr. Bang-Jensen's case became public and Mr. Hammarskjold replied that the earlier case had been terminated.

MOST IMPORTANT CHARGE IGNORED

The press conference was on the morning of December 16. A check of the records indicates that the termination took place on that very day, either by a curious coincidence or, more presumably, after the press conference—to establish a precedent for the dismissal of Mr. Bang-Jensen.

The United States representatives have failed to discuss the most important charge against Mr. Bang-Jensen, that he gave assurance of anonymity to prospective witnesses which were in excess of his authority.

They also failed to discuss the sabotage of the Hungarian investigation which would have resulted from the refusal of the witnesses to testify because of the refusal to guarantee the United States objective, as stated by Mr. Wadsworth, "that the anonymity of the Hungarian witnesses should be preserved and that thereby they and their relatives could be protected against Communist reprisals."

Following is the complete text of the only paragraph in which Mr. Wadsworth discusses the charges against Mr. Bang-Jensen:

"Secretary General Hammarskjold has now made public the letter which he gave to Mr. Bang-Jensen specifying the reasons for his dismissal. I do not think this letter supports the idea which seems to exist in some places that Mr. Bang-Jensen was dismissed for opposing and denouncing communism. In fact, among the people whom he opposed were two of the main authors of the United Nation report on Hungary, one of the most powerful indictments of Soviet Communist behavior ever issued by the United Nations. I believe that Mr. Hammarskjold's letter shows that he was fully justified in dismissing Mr. Bang-Jensen."

It is agreed by both sides that Mr. Hammerskjold's letter does not support the idea "that Mr. Bang-Jensen was dismissed for opposing and denouncing communism." Did anyone seriously expect it to? But Mr. Bang-Jensen's letters support and document that idea and the United States representatives to the U. N. have failed to discuss his letters.

They have also failed to discuss his documentation that members of the secretariat tried to sabotage the report and that it is one of the most powerful indictments of Soviet Communist behavior despite, not because of, their activities.

MR. BANG-JENSEN'S DEFENSE

As for the charges that promises of anonymity were given in excess of his authority, Mr. Bang-Jensen told Mr. Hammarskjold:

"It is difficult to understand how anybody can determine whether this charge is true, without knowing what I was authorized to promise the witnesses who testified before the Special Committee on Hungary and what you claim in this respect.

"However, the various so-called reports of the Gross committee and the disciplinary committee do not give the slightest hint as to this. Nor have you and Dr. Protitch, in spite of many urgings since October 10, 1957, been willing to tell me what you maintain that I was authorized to promise the witnesses."

Mr. Bang-Jensen maintains that he received the authorization early in February 1957, from Dr. Protitch and that it was supported by a February 8 memorandum from Andrew Cordier, an American who is the Secretary General's executive assistant, and several additional memorandums.

He was promised copies of these memorandums for his defense but while waiting to receive them he was criticized for failing to reply, convicted and fired. The United States representatives to the U. N. have failed to discuss this angle of the case.

MORE UNANSWERED QUESTIONS

Since it is claimed Mr. Bang-Jensen acted without authorization, he has asked Mr. Hammarskjold:

"(a) Why, for 8 months, from February 8 to October 9, 1957, neither you, Mr. Cordier, Dr. Protitch, Mr. Jordan or anybody else in the Secretariat ever asked me:

"(i) To see the list of witnesses;

"(ii) Where and in what manner I kept and safeguarded this, perhaps the most secret document in the United Nations on the security of which human life depended;

"(b) Why I was not requested to hand over the list of witnesses to you, Dr. Protitch, or Mr. Jordan for safekeeping, at one of the following occasions:

"(i) After the Committee on Hungary had adopted its report on June 7, 1957, and it was generally thought that the Committee thereby had concluded its functions;

"(ii) Before I left on a 2 months' home leave on June 17, although the report of the committee was made public on that date, and one could well expect that questions might then be raised relating to the identity of the witnesses;

"(iii) When shortly after my return from Denmark, on August 26, I was told, without any explanation, that you and Mr. Cordier had agreed that I be dismissed as deputy secretary of the Committee on Hungary, shortly before the General Assembly's special session on Hungary was about to meet;

"(iv) When, on September 19, one of your Under Secretaries, in a memorandum to you, as I later discovered since it was included as evidence against me among the annexes of the final Gross 'report,' claimed that I had been 'mentally ill,' apparently since the end of May, and that he was 'not at all sure that he is very far from a state of mind which could lead to physical violence, either to himself or others.'"

Neither Mr. Hammarskjold, Mr. Lodge, Mr. Wadsworth, Mr. Cordier or anyone else has answered these questions or the many other serious charges raised in previous issues of the Tablet.

THE MORAL CONSIDERATION

Mr. Bang-Jensen further points out that if he acted without authorization, "which I do not for a moment admit," this does not change the fact that "a promise was given to the witnesses on behalf of the United Nations by an officer of the organization.

"Whether he actually was authorized or not is of no legal consequence. In the circumstances, all lawyers, I should think, will agree that the United Nations and I, legally as well as morally, are bound by this promise and that it cannot be modified without the consent of the witnesses themselves."

To this argument Mr. Hammarskjold made the amazing statement: "Any moral reservations which might have prevented you from obeying my instructions do not ameliorate the impropriety of your conduct."

When United States citizens protest this travesty of justice to the United States representatives to the U. N. they receive a gratuitous statement which ignores the charges and documentation but believes Mr. Hammarskjold was fully justified in dismissing Mr. Bang-Jensen.

Termination of Voice of America Broadcasts in Baltic Languages Blow to United States Prestige and Interests

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in ELTA, Information Service of the Supreme Committee for Liberation of Lithuania, of August 10, 1958:

TERMINATION OF VOA BROADCASTS IN BALTIC LANGUAGES BLOW TO UNITED STATES PRESTIGE AND INTERESTS

The reorganization of the Voice of America radio center in Munich threatens to become a major blow to the United States interests and prestige among the people of the Baltic States.

On July 2, the United States Information Agency has announced that it was augmenting the Voice programs in English and Russian and, in connection with this, was reorganizing its radio center in Munich. In plain language it means that, under the cover of administrative changes, the only half-hour broadcasts by the free world from Europe in the Baltic languages are being abolished.

As of September 1 of this year, the free world's voice will not be heard from Europe in Estonian, Latvian, and Lithuanian any more. The listeners of Voice of America in the Baltic countries will be very painfully affected by this move, as they do not have, and never had, any special American programs broadcast to them from Europe (as, for instance, the Radio Liberation for Russians or the Radio Free Europe for Bulgarians, Czechs, Hungarians, Poles and Rumanians). Could this reorganization, therefore, be a conscious act designed to make the discrimination of the Baltic peoples in the field of the free world's information even worse?

The Baltic people will never be able to comprehend that at the same time, while

they are discriminated against, the Voice is increasing its programs in Russian. The inevitable question arises if by such actions the United States desires to promote the Russification process which the Baltic peoples are resisting with the same determination as ever in the past.

What is now being liquidated is not an instrument of the cold war, but the only moral ties of the United States, as the leader of the free world, with the captive Baltic peoples whose forcible annexation by the Soviets will, according to numerous solemn statements, never be recognized by the American Government.

For a number of years the Voice of America has been successfully proclaiming the word of hope, strength, and truth. No Communist obstructions have managed to prevent the Baltic peoples from listening to this word. This fact is borne out by letters, personal witnesses and, especially by the press and literature of the Communists themselves who have classified listening to the Voice as one of the major sins against the regime. Hence the transfer of Voice's programs to Washington is not only an unjustifiable retreat of the United States from Europe, bound to encourage the Soviet imperialists, but an offense to its listeners in the Baltic countries—they will interpret it as an inexcusable concession to the Soviets, as a step toward the recognition of Soviet occupation. The unhappy act in Munich will create bitter disappointment among the Baltic peoples in the free world's policy toward the captive nations; a policy which has been spineless enough even before this act.

It is astonishing that the people responsible for this reorganization have absolutely disregarded the specific character of the programs in the Baltic languages; that they have been oblivious about the unusual international status of these countries as well as about the fact that these programs are for the Baltic peoples the only access to American information from Europe—their own continent.

According to the new setup, as of September 1—why such a feverish haste to create an accomplished fact?—instead of the former free Baltic departments in Munich, there will remain only one American official with three native employees (one for each nationality). Anyone having a minimal knowledge of the propaganda broadcasting field knows perfectly well that such a service will in no way be able even to approximate the impact for which the Voice programs from Europe have been noted.

The search for new and more creative ways in disseminating United States information is not compatible with the rupture of existing contacts. The authors of the "reorganization" of the Voice Radio Center in Munich contradict themselves when, allegedly looking for better means to win new friends for America, they risk the alienation of true and tried friends—those in the Baltic countries. The temporary continuation of the Baltic programs from Washington, even if somewhat increased, cannot disguise the naked fact that an attempt has been made to extinguish the only channel of United States information in Europe in the Baltic languages. This is something that only the enemies of the United States will rejoice in.

The muzzling of the United States voice in Europe comes at the time when the Communists are strengthening their broadcasts beamed to the West. (Radio Prague, for example, has increased its broadcasts directed at West Germany to 5 half hours a day; Radio Budapest is propagandizing the West Germans by means of two daily half-hour broadcasts.) And the silencing of America's story coincides with a deluge of Communist propagandistic interpretations of the Middle Eastern events to the Baltic people.

In order to avoid irreparable harm, the "reorganization" of the Voice of America's Baltic programs in Munich must be immediately stopped. No dubious temporary motives can justify a major blow to the United States prestige in the Baltic countries.

In case it would not be possible to maintain the Voice of America broadcasts from Europe in the future, another way must be found before the closing date to guarantee at least a minimal United States radio program from Europe in the Baltic languages. All such possibilities must, of course, be thoroughly examined in order to insure as smooth as possible a transition from the present situation to another one. Only in this way can the severe problem of the personnel of the discontinued services be solved, because it is unthinkable that people who have faithfully worked for the United States would be just simply discarded and left exposed to the hand of Communist revenge which can easily reach them in Europe. Only such a reorganization and not a liquidation, can be compatible with genuine United States interests, its prestige, and its moral obligations toward the friendly Baltic nations.

Ike Spells It Out

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. BOSCH. Mr. Speaker, President Eisenhower made a forceful speech to the United Nations General Assembly yesterday. Because I believe it will be of interest to my colleagues, I include an editorial from the August 14, 1958, edition of the New York Daily News entitled "Ike Spells It Out."

The editorial follows:

IKE SPELLS IT OUT

In the course of his address to the United Nations General Assembly yesterday, President Eisenhower effectively answered those critics, both here and abroad, who have complained that the United States of America actually never does come up with a definite foreign policy.

This Eisenhower plan for the Middle East, as spelled out to the world, proved to be both bold and comprehensive.

It embraces four main items: (1) Fast, economic, and technical help for the Arab nations; (2) a sizable U. N. standing army to relieve our marines of their present unwelcome chore; (3) a firm pledge to small, threatened nations that the United States remains willing to back them militarily, within the U. N. framework; (4) the creation of a U. N. monitoring body to muzzle those flammatory propaganda broadcasts which have been creating trouble in the Mideast.

Above all, Ike emphasized, the Arabs themselves would have to contribute their own energies to a do-it-yourself program for their region. He stated emphatically that the United States had no desire at all to rule the Mideast roost—and added pointedly that the days when one nation (Red or otherwise) could dominate the map are ended.

To make that item even clearer, General Ike invited his listeners to examine the maps, both geographic and economic, of our globe. Nowhere, he noted acidly, could anyone find a spot where America, a victor in two world wars, had taken advantage of her strength to annex foreign territory or establish an economic dependency.

Ike conceded freely that we might have pulled some bloopers of our own in that region. Were any of our broadcasts, for instance, offensive to any Mideast states? We'd be willing to listen to reason, just as soon as Arab radio transmitters abandoned their incendiary songs.

So that was our United States bill of goods presented forcefully but temperately—and now what are the chances of making a sale?

We'd say that—except for the presence of the unpredictable Nasser and the always-out-for-trouble Kremlin—Ike's friendly and practical blueprint would meet ready Mideast acceptance.

IT'S UP TO THE ARABS

Of recent days, however, Nasser has been less belligerent than usual. Some usually authoritative sources say that he finally has grown worried about increasing Communist meddling in the affairs of his United Arab Republic. If so, the Eisenhower plan may give him an easy and face-saving way to get off the Red hook. Our President, significantly, didn't once bring the sensitive Nasser's name into his speech.

Soviet Foreign Minister Andrei Gromyko followed President Ike to the rostrum, and, though he wore out two U. N. interpreters with his lengthy harangue, to the surprise of nobody agreed with hardly one word Ike had said.

That dangerous situation in Lebanon and Jordan? That situation, Grommy insisted solemnly, was created only by the arrival of British and United States troops. In short, the burglars weren't doing a thing wrong—there wouldn't have been any trouble at all if the West's cops hadn't arrived.

Gromyko then repeated his standard demand that our troops get out of the Mideast pronto, snooting the facts that some already have departed and that we'd dearly love to withdraw the rest the minute the Mideast fire is declared out.

KREMLIN DISSENT

Andrei, the mouthpiece of a Government which has gobbled up the Baltic States, Rumania, Bulgaria, Czechoslovakia, East Germany, Poland, and Hungary within recent years, then proceeded to denounce the United States and England as dirty imperialists and colonialists. To the assembled U. N. diplomats' everlasting and resounding credit, not a soul laughed.

Wetbacks Almost as Rare as Condors

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. HOSMER. Mr. Speaker, the excellent work in southern California of the border patrol in handling the problem of the illegal Mexican immigrants—the wetbacks—is well described in the following article by Lou Jobst which appeared in the Long Beach (Calif.) Independent-Press-Telegram on August 10, 1958. Gen. Joseph M. Swing, Commissioner of the Immigration and Naturalization Service, and his fine staff on the border patrol deserve commendation for the effectiveness of the work done in Operation Wetback:

BORDER SNEAKS YIELD TO LEGAL TRANSIENTS

(By Lou Jobst)

TECATE GATE, MEXICO.—The border people talk about the wetback the way ornithologists discuss the California condor. Both are rarities.

The day when illegal Mexican immigrants trudged across the dust-filled river beds in droves to seek the Yankee dollar in California fields and orchards is past.

Credit disappearance of the unlawful dusky itinerant to an unheralded but unique task

force—Operation Wetback—a joint undertaking of the United States and Mexican Governments.

The big roundup started in the summer of 1954, a year in which more than 1 million illegal foreign entrants were repatriated.

United States Immigration Bureau and its troubleshooters, the border patrol, cooperating with the Mexican Servicio Migracion, clamped a "Tamale Curtain" on the international border.

The effect was marked and immediate.

Apprehension of Mexican citizens illegally in California for the fiscal year ending last June 30 totaled considerably less than 10,000. This is a far cry from the 330,000 picked up in 1953 and 291,000 taken into custody in the southwest region in 1954. Or the 32,000 captured in California in 1955.

But, the border hasn't been sealed by arms, desert-girdling jeeps, and airplanes alone.

Immigration authorities and Labor Department officials oiled the legal machinery to change the Mexican visitor from wetback to bracero, vernacular for Government-sponsored farm worker.

While illegal alien arrests dwindled the number of braceros hired spiraled.

Under the Mexican national program 213,000 were admitted in 1954, 416,000 in 1956, and 450,000 last year.

California-bound braceros zoomed from 55,000 in 1954 to 150,000 last season. More than 65,000 have been admitted thus far this year.

Experts believe this program has headed the wetback for oblivion.

Cheering signs—other than international goodwill—are seen in the operation.

Shortly after the dragnet operation was perfected, payment of unemployment benefits in southern California dropped by $325,000 a week. And public health officials reported drops in case loads of up to 50 percent.

Crime and communicable disease—the types associated with wetbacks—declined by 40 to 80 percent and epidemics such as dysentery virtually disappeared.

Border men are proud of the operation's humanitarianism and point out that the thousands of illegal entrants were rounded up without a single injury or violent incident.

Does this steady decline of wetbacks mean the border patrol has outlived is usefulness?

"Hardly," is the reply of the service, explaining that traffic on the border is steadily mounting.

Last year at district entry points more than 92 million border crossers (more than the combined populations of Mexico, Canada, and Great Britain) were counted.

By and large these are legal transients—tourists and tradesmen—but the criminal set is still among them, pulling some new razzle-dazzle. And immigration agents have leaped from the saddle to cockpit and other modern means in their vigilance against this unlawful trafficking.

This year 26 airplanes have been seized. The contraband cases ranged from dope peddlers to a man trying to land 8,200 parrots from central Mexico in Los Angeles. The birds communicate to humans a virulent, medication-resisting fever.

On the ground, border patrolmen captured 36 armed fugitives without losing a single officer in service. (The patrol has the Nation's top pistol team.)

On the subversive and criminal front 252 persons, many Communists, were excluded from entry into the States.

More than $171,356 in narcotics was confiscated.

The ocean borders of California are another scene of hectic operations for the Service. Officers this year have detained 1,135 aliens aboard ships while rounding up 23 stowaways.

These seaboard cases range from the bizarre (an attempt to smuggle 1,800 pounds of cooked lobster ashore in San Diego) to the more bizarre (the cracking of the Huey Clan, a fraudulent identity scheme that saw more than 225 illegal Chinese entries exposed).

And, all the while in Southern California the immigration people are keeping tab on 313,656 aliens (among them 3,890 Russians), not including the braceros.

One border veteran summed up the department's attitude.

"The border patrol is just like any other law enforcement agency—it was created not just for apprehension of the criminal but it provides a threat for the would-be law violator."

Loyalty Day Essay

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. DAVIS of Georgia. Mr. Speaker, recent events in the Middle East have focused attention on the sinister effects of the skillfully contrived propaganda of international communism. The Veterans of Foreign Wars have for many years been combating this propaganda weapon through the observance of Loyalty Day and by other methods. One such method has been the sponsoring of essay contests for school children, that our younger generation may arm itself with a knowledge of our enemies.

Recently I received from the Honorable Charles A. Moran, Georgia State Loyalty Day chairman, of the Veterans of Foreign Wars, a prizewinning essay on the subject of Loyalty Day. This fine essay was written by an eighth grade student, James Denman of the Immaculate Conception School in Atlanta, Ga. Under unanimous consent I take pleasure in inserting this essay herewith:

LOYALTY DAY

(First prize essay by James Denman, eighth grade, Immaculate Conception School, Atlanta, Ga.)

The Veterans of Foreign Wars established a day which they called Loyalty Day. This is a day, set aside in May, that gives all citizens an opportunity to profess their loyalty to the flag, country, and God. We practice loyalty every day of the year, but on Loyalty Day we show, in an outward way, our loyalty, not only to the flag, country, and God, but to our neighbors and our employers and associates.

Loyalty to God comes first to a Christian. On this day he goes to his church, and gives special praise to God. Loyalty to our country comes next. We show our loyalty to our country by celebration and by praying to God for the good of our country on this day. We show our loyalty to our country at other times, in a more effective way. We go to the poles to vote, in order to keep our country in the hands of Christian men. We show our loyalty to the flag by saluting it daily, and keeping it from disgrace. We show loyalty to the flag because it represents the freedoms of our country. Freedom comes in many forms, and the flag represents them all.

We show loyalty to God because He gave us freedom to live our lives in the way we think we should. We show our loyalty to our country because it is the land where we practice our freedom.

Freedom did not come to us without cost. We gained it through great hardships and sacrifice. When our country was first founded, it was not a free independent country. Men with loyalty to their fellow men fought to gain freedom. Through the ages, more men, loyal to the country which their ancestors fought to gain, fought to keep this freedom. The men who fought in the wars, which preserved our freedom, showed their loyalty in a great way. These were men like the VFW. And many did not return to their homes as a result of their bravery.

We are lucky to live in a country which we have reason to be loyal to, and, we have God to thank for this. This is why we show loyalty to God.

There are some lands where the people do not have freedom, and are loyal only to the state. Russia is a great example of this, and the countries where Russian influence is strong. In these countries, the people are taught, from the moment they could speak, to be loyal to the state only, and to speak against the things that favor independence. They were taught that they must put all personal feelings aside to serve the state.

Only the strongest Christians have any idea of independence and God. The people of these countries have no idea what freedom is like. Many die each day trying to gain freedom, which is taken for granted in this and a few other countries.

Because God gave us this freedom, and our country is the place where this freedom is a daily practice, and the flag represents this great freedom, we show loyalty to these articles which signify freedom.

There are other reasons to be proud of, and this is the fact that we live in a State that did much in our fight to gain the freedom of our country. Georgia is one of the Original Thirteen Colonies, and was one of the leading colonies to fight the British for our freedom. So we should show a special loyalty to Georgians.

We also have another flag to be proud of, that of the stars and bars and the seal of Georgia. This flag represents the freedom and glory of our own State, Georgia. So it is great to be a Georgian, as the slogan says, "A Georgian can be specially proud of his heritage as a Georgian."

A Bill To Amend the Criminal Code With Regard to the Theft of Livestock Animals

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. BERRY. Mr. Speaker, I am today introducing a bill which would amend the Criminal Code to provide that the theft of cattle, sheep, swine, horses, mules, and goats shall be the same as the larceny of property of the value of $100 or more.

The purpose of this bill is to bring the Federal law in line with the State laws in western States.

In nearly all western States the theft of these livestock animals is grand larceny regardless of their value. The Federal law should be the same as State laws.

I have, therefore, introduced this bill today in hopes that a report will be available for early committee action when the Congress reconvenes following the first of the year.

Daily Digest

HIGHLIGHTS

Senate passed 87 measures on calendar call, passed military constructions appropriations, worked on supplemental appropriations, and rejected bill on Capitol front extension.

House passed farm bill and bill extending Mexican farm labor program.

Senate

Chamber Action

Routine Proceedings, pages 16125–16163

Bills Introduced: 8 bills were introduced, as follows: S. 4288–4295. Page 16131

Bills Reported: Reports were made as follows:

S. 3268, proposing technical amendments to the National Science Foundation Act, with amendment (S. Rept. 2367);

H. R. 12670, additional payments to Indians of Crow Creek Sioux Reservation, S. Dak., with amendment (S. Rept. 2368);

H. R. 12663, additional payments to Indians of Lower Brule Sioux Reservation, S. Dak., with amendment (S. Rept. 2369);

S. 4273, to provide for cooperation with the European Atomic Energy Community, with amendments (S. Rept. 2370);

H. R. 7860, relating to payments to members of the Pine Ridge Sioux Indians for damages resulting from establishment of Pine Ridge aerial gunnery range, with amendment (S. Rept. 2371);

S. Con. Res. 116, to approve agreement between the U. S. and European Atomic Energy Community concerning cooperation to advance the peaceful application of atomic energy (S. Rept. 2372);

H. R. 11889, to permit articles imported for exhibit at the Minnesota State Fair to be admitted without payment of tariff, with amendment (S. Rept. 2373);

H. R. 12662, acquisition of lands for reservoir created by construction of Oahe Dam on Missouri River, and rehabilitation of Standing Rock Sioux Indians of North and South Dakota, with amendments (S. Rept. 2374);

H. R. 11630, to extend the unemployment insurance system to ex-servicemen (S. Rept. 2375);

H. R. 12489, to extend the time for making certain reports under the Highway Revenue Act of 1956 and the Federal-Aid Highway Act of 1956 (S. Rept. 2376);

S. 3571, providing equal treatment of all State-owned hydroelectric power projects with respect to the taking over of such projects by the U. S. (S. Rept. 2377);

S. 3776, to extend the time for collection of tolls to amortize the cost of a bridge across the Missouri River at or near Miami, Mo., with amendment (S. Rept. 2378);

S. 4179, to authorize the Tahchevah Creek flood-control project, Palm Springs, Calif., with amendments (S. Rept. 2379);

S. 4192, to authorize construction of the Bardwell Reservoir on Waxahachie Creek, Tex., with amendments (S. Rept. 2380);

H. R. 8160, to authorize a survey of the Tensaw River, Ala., in the interest of navigation and allied purposes (S. Rept. 2381);

H. R. 8652, to rescind the authorization for the Waldo Lake tunnel and regulating works, Willamette River, Oreg. (S. Rept. 2382);

H. R. 11697, relating to the prevention of obstructions and injurious deposits in the harbors of New York and Hampton Roads (S. Rept. 2383);

H. R. 12216, to designate the Carthage Dam and Reservoir (Tenn.) to be constructed on the Cumberland River as the Cordell Hull Dam and Reservoir (S. Rept. 2384);

H. R. 13342, to provide for a survey of the Parish Line Canal, La., to determine feasibility for navigation (S. Rept. 2385);

S. 4287, relating to the detention of mail for temporary periods in certain cases (S. Rept. 2386);

S. 4266, to establish the U. S. Study Commission on the Neches, Trinity, Brazos, Colorado, Guadalupe-San Antonio, Nueces, and San Jacinto River Basins, and intervening areas (S. Rept. 2387);

H. R. 13549, Social Security Amendments of 1958, with amendments (S. Rept. 2388); and

S. J. Res. 201, to authorize chairman of the Joint Committee on Atomic Energy to confer a medal on Rear Adm. Hyman George Rickover, U. S. Navy (no written report). Page 16127

Appendix

Address by Dario Toffenetti

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. BYRNE of Illinois. Mr. Speaker, Chicagoans are proud people, and justifiably so. We are proud to be known as midwesterners and we are proud of what made us. The heartbeat of our beautiful city is ever strong and steady.

Emerson, one of our truly great American writers, said:

The chief want of man in this life is someone to make him do what he can do.

There is a quality about Chicago which though inexplicable makes people who live there do many things for the growth, development, improvement and peace of the world. Not only have important contributions in the business and commercial world been made by Chicagoans but many wonderful things have been done in the cultural and scientific areas.

I recall that another learned middle westerner, Rev. John Francis Bannon, S. J., of St. Louis University has spoken of the midwesterner as the midcontinent man. He recorded well midcontinent man's achievements. Such a man we have in Dario L. Toffenetti, a noted restaurateur in Chicago. Recently Dario Toffenetti was given an honorary doctorate of law degree by the University of Idaho. I am happy for this recognition to be given to him because he has earned it.

Those of us who have the good fortune of being a Chicagoan and those who have visited Chicago know that this city is a melting pot. We have men who despite their being at opposite poles as to faith, nationality, and political party, are united in the conviction that God created all men in His image and likeness and assigned to man the quality of dignity and humanity so that we could live in peace and temper our deeds with mercy and justice. Dr. Toffenetti performs his original task well.

In May, Dario L. Toffenetti was host to an important dinner known as the international friendship dinner. Many distinguished ladies and gentlemen were there. Some timely remarks were made by a great lady of Chicago and a Republican friend of mine, Mrs. Bertha Baur. Mrs. Baur, who is 86 or 88, said:

There is no age. We live in deeds, not years; in thoughts, not breaths; in feelings, not in figures on a dial. We should count time by hearthrobs. They live the most who think the most, do their best. There is no age.

The following is Dr. Toffenetti's inspiring address before the international friendship dinner in Chicago on May 6, 1958:

Mr. Goldstein, our toastmaster; Consul General Oldenburg and Mrs. Oldenburg; honorable consuls representing 49 nations of the world and their distinguished wives; Postmaster of Chicago and Mrs. Schroeder; Col. John Reilly, assistant to the mayor of Chicago, and Mrs. Reilly; Mr. Earl Eisenhower, the brother of our President, and Mrs. Eisenhower; Mrs. Bertha Bauer and Mrs. A. Henry Goldstein, wife of our distinguished toastmaster; General Woodward and Mrs. Woodward; Admiral Whitehead (retired) and Mrs. Whitehead; Mr. Robert Robinson, district director of immigration, and Mrs. Robinson; our distinguished Judge John Sbarbaro; Dr. Augusto Daro; Mr. Daniel D. Glasser, past commander of aviation post, American Legion; distinguished guests, friends, gentlemen of the press, the American Legion, and the Rotarians International, representatives of the Chicago Association of Commerce and Industry; ladies and gentlemen, it is a pleasure to have you here tonight as guests of the Toffenetti organization. Myself, my family, and all our employees feel proud that you honored us with your presence.

We have been in the Loop for 44 years, and during this time we have had the pleasure of serving thousands of people originating from the various countries that you represent; we feel deeply grateful to you and your people.

Today, ham and sweets, strawberry shortcake, Idaho baked potatoes and Italian spaghetti (my wife's famous recipe), have become international symbols of good food, giving us greater determination for constant quality. (Excuse my plug.)

As restaurant men, we feel that our contribution and responsibility to our city, our Nation and the world goes further than purveyors of food. We are not only health builders but also morale builders; well fed bodies develop intelligence and creative minds and vitality. Good food served in a friendly, pleasing atmosphere creates contentment. Well fed people are tolerant, happy, generous and make better citizens. You can see that restaurants are the direct fortresses for better public relations among the nations of the world. Great national treaties, public functions, commercial deals all conclude with a wonderful dinner, a few cocktails, champagne, and a warm friendly spirit of fellowship.

Every hometown to us is the center of the world because the heart is centered in the town; small or big, it is still the hometown which gives us pride. We feel proud of our community because of the contributions that we make; our character, our integrity, our dreams, our creative work; cities, towns, villages, are the realization of the dreams of men.

Today, our towns and cities are getting closer and closer. Distance is not measured by miles or space. Around the world in 80 days was a big accomplishment 80 years ago. Today, one can go around the world in less than 36 hours with the supersonic speed and mighty planes of the present. As the march of progress goes on and the people of the world mingle more readily than ever, problems are bound to arise; personality clashes, opinions, complexities of the various nationalities, pose many problems which we must meet.

As I said before, food helps people's disposition and temperament. Yet, we need another important formula. Consideration for others is to raise every man and woman to our level, entitled to dignity and respect, to look at the other person's point of view with an open mind and calm judgment. We may have divergence of opinions and ideas, but we can always come to a meeting of the minds if we have respect and consideration for the others. Whether an individual is rich or poor, brilliant or mediocre, whether a nation is large or small, they should all respect what God has given us—the dignity of men. By having consideration for others, our minds are open so that we see their good qualities, enabling us to discuss problems in an intelligent manner. Consideration for others, whether practiced by individuals, employers, employees or nations brings about the understanding for the realization of the brotherhood of men.

Chicago is the melting pot of the world. Over the years people came from all your countries and brought with them a heritage of character, indomitable spirit, usefulness, integrity and good citizenship. They built this city stone by stone and today it is one of the greatest industrial, financial and cultural centers of the world. Regardless of nationality, color, creed or religion we work together, side by side in harmony and peace. What spurred our pioneers and sacrificing people to work and develop our wonderful city was only the fact that they knew that they were needed and important to build our great city and their Nation. They had pride; they had strength of character. Chicago is a great city, yet it could not live and endure if it would be isolated from the rest of the world.

Chicago needs all your people from your nations to come and integrate your efforts with ours, your brains with our brains, in the sciences, the professions, industry, agriculture, medicine, surgery and all the vast enterprises which we now enjoy.

The greatest achievements of this modern time were accomplished by men and women from many nations (the giant minds that do not seek glory). Louis Pasteur, of France, discovered bacteria. Professor Harvey, of England, discovered the mystery of the circulation of the blood. Madame Curie, of France, radium. Dr. Fermi, of Italy, atomic energy and radiation. Our own Dr. Jonas Salk, of the United States of America, vaccine to prevent polio. Dr. Koch, of Germany, discovered the bacteria causing tuberculosis. Dr. Minoto, Dr. Murphy, Dr. Cesedman, of England, discovered the use of liver to cure anemia. (The gain of the world; it cost us thousands of dollars, because everybody eats liver and we have to pay higher prices for liver, but we are happy to do it.) And again, Dr. Pavlaow, from Russia, made a great contribution to science. His discovery of the use of animals for experimentations. Professor Benti and Professor Best, from Canada, discovered insulin, and Professor Flemming, from England, discovered penicillin. Dr. Einstein, of Germany, whose reasearch and genius have benefited civilization in its quest of the natural and supernatural.

All these discoveries are passed on to the great laboratories of the world for the bene-

fit of all civilization and has greatly lessened pain, suffering, and poverty. It makes for a better world. It has been a selfless endeavor and all doctors should be elevated to the highest honor of all nations.

Chicago, we are proud to say, is constantly working for the improvement and betterment of the medical world. It is truly a wonderful medical center for all, and great credit should be given to our friend and leader, Dr. Carl Meyer, the guiding genius of the largest hospital in the world, the Cook County Hospital, which he directs.

The Chicago Fair of 1959 offers to you a great opportunity to show Chicago the products of your Nation and open to your people a greater prosperity and also cement lasting friendship.

The various nationalities here represented have been merged into the melting pot that is Chicago, to make the world a better place to live.

And now commerce. Commerce is a treasury to which nations make their contributions for the benefit of all mankind. All the riches of the world stored away by nature, such as oil, iron, gold, cobalt, and items precious to humanity, can be depleted, but the interdependence of nations is and ever will be necessary to preserve the wealth for all the world to share.

The St. Lawrence seaway, the Sag-Cal canal, the highways of the seven seas, the highways of the sky, railroads, buses, trucks, are open to your nations and to our Nation to send the products to your industry, agriculture, and imagination to us and ours to yours. Come to the 1959 Fair.

With the help of God, let us all join hands to do our best to create and exchange new opportunities so that all can prosper and share God's blessings. You are the ambassadors of the world, the salesmanagers of your countries and ours. You are the great force for bringing peace and brotherhood to a troubled humanity. God grant that peace and security may come to all men of good will, wherever justice and mercy is the guiding light.

Views of the National Education Act of 1958

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mrs. BOLTON. Mr. Speaker, on August 8, H. R. 13247, known as the National Defense Education Act of 1958, was passed by the House. This legislation passed the Senate yesterday, and it now goes into conference.

While I give full credit to the Committee on Education and Labor for an earnest attempt to solve some of our educational problems, and to such of my colleagues who voted for this bill I still remain in disagreement with them. It seems to me that it is a mistake for the Federal Government to move too heavily into the field of education.

As passed by the House, this bill would have put the Federal Government into the business of education to the tune of about $1 billion. If I thought the $1 billion would achieve the purpose intended by this measure, I would be more favorably disposed. However, the entire educational experience of this country shows that the greatest progress has been made through the States and not by overall Federal controls. There is no question that he who pays the piper calls the tune, and Federal financing means an increasing Federal control of the school system everywhere.

It is noteworthy that this bill also does not get to the crux of what many educators think is our major problem—the fundamental primary and secondary school training. In passing also let me note that this measure, while it was designed to help students get through college, makes no provision for additional pay for schoolteachers. Our educators complain more bitterly about the lack of good teachers than anything else. The only help to teachers offered here is 4 years' training for foreign-language teachers, who presumably would be expected to teach at the same too low pay scales.

Editorials from Cleveland newspapers point out that although the House-passed measure provides for college scholarships for students there are literally thousands of scholarships which go begging every year. It seems to me a mistaken theory that the mere appropriation of large sums of money from Washington can force people to do what they are not disposed to do for themselves.

Our leading scientists seem to be in agreement that any program to stimulate scientific training should start in the elementary grades. This is where the child's initial interest in science or any other subject is first aroused. This measure starts from the top, in other words, at the college level and tries to take young people whose bents have already been formed and turn them into scientific channels. Neither educators nor scientists believe this feasible.

I want to point out that the Cleveland Plain Dealer also notes this measure certainly would result in drying up scores of private scholarship money. I think this would be disastrous. The Cleveland Press, a Scripps-Howard newspaper, terms this measure—

A part of the irresponsible push toward bigger Federal deficits, more power in Washington and less for the States and the people themselves.

Mr. Speaker, believing my colleagues will be interested in the views of these two leading Cleveland newspapers in opposition to this bill, I ask to include editorials from the Cleveland Press of July 30, 1958, and from the Cleveland Plain Dealer of August 4, 1958.

[From the Cleveland Press of July 30, 1958]

MOVING IN ON THE SCHOOLS

In both Houses of Congress, committee approval has been given liberal bills to solve our educational problems by plunging the deficit-ridden Federal Treasury deeper into this field.

On top of the $1 billion or so the Government now feeds into public education via various routes, the bills before Congress propose to go directly into the production of scientists, scholars, and teachers.

Over the next several years, these bills propose to dole out up to $1,500,000,000 for scholarships, student loans, teacher training, etc.

Up to now, Congress has turned back the energetic effort to get the Government in the school-building business. But the scholarship bill is the opening. It heads the same way.

This all is based on the theories that too many gifted youngsters are not going to college simply because they lack the money, and that only the Government can remedy this—generalizations never substantiated.

There literally are thousands of scholarships which go begging every year. And the number of scholarships has been growing fast—the last survey indicated there were nearly 250,000. (The most liberal of the bills before Congress would provide an average of 23,000 a year.)

This is called a shot-in-the-arm program—a one-time deal designed merely to stimulate State, local, and private effort for better education. Such programs repress rather than stimulate because they tempt people to depend on others for things they can do better for themselves.

Whenever the Government administers a shot in the arm it normally follows with permanent cures from Washington.

This simply is a part of the irresponsible push toward bigger Federal deficits, more power in Washington and less for the States and the people themselves.

[From the Cleveland Plain Dealer of August 4, 1958]

NO TO UNITED STATES SCHOLARSHIPS

In their flurry of last-minute money-shoveling, some leaders in Congress are bent on appropriating hundreds of millions of dollars for Federal scholarships for 23,000 college students.

We think their program is unwise and unnecessary. It was born of the hysteria that spread at the time Russia sent up its first sputnik and it was pumped up by the free-spenders in Congress and out.

The program is unwise because in some aspects it would be self-defeating. Individuals and corporations, for example, which have been donating scholarship money in increasing amounts in the last decade would be less likely to donate if the Government moved in.

There are more such scholarship grants than you might imagine—10 or 12 times as many as the 23,000 proposed by the free-spenders, according to the last count we saw.

You know what would happen if the private scholarship money began to dry up. More and more demands for Government aid, so that what is now termed a temporary experiment would become a permanent arrangement costing billions. That would just be added to the national debt as a larger millstone to be passed on to the coming generation which the scholarship gifts are supposed to help.

We also have reservations about the Federal scholarship accent on science. It may bring into that field young people who ought to be elsewhere. Once started, those interested in other fields would beat the drums for scholarships in academic subjects, the arts, athletics. And why not? We ought to beat the Russians in them, too, they could say.

We think a better system of helping the Nation and our young people to understand their responsibilities to our country would be to offer repayable scholarship loans with low interest to those who ordinarily are lost to college because of family circumstances. Another expedient might be to give income tax credits to fathers for tuition payments.

We don't see why Uncle Sam should jump into the business of giving scholarships to young people who might get them from private sources whose parents are able to put them through college or who have a college fund built up.

Corporations and individuals should be encouraged to give more to colleges and scholarship funds for the days in the 1960's

when the postwar baby boom will be seeking degrees. The Federal scholarship notion would discourage rather than encourage such giving as people surrendered to the theory of letting Uncle Sam do it.

Ad Expense Disallowed

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter addressed to me under date of August 6, 1958, by Mr. A. E. Cahlan, general manager of the Las Vegas Review Journal, together with an editorial which happened in Editor and Publisher, captioned "Ad Expense Disallowed."

This letter and editorial depict a very serious situation which is rapidly developing in this country today and which threatens the foundations of our democracy—freedom of the press. It is conceivable that unless something is done to curb the increasing self-assumed powers of our Internal Revenue Service that we will lose that right granted to us in the Bill of Rights, because there will be no press and, therefore, there can be no freedom of the press.

Advertising supports the cost of producing the newspapers of this country and is equally as vital to the consumer public. I wish to go on record as being unlaterably opposed to the Internal Revenue Service ruling referred to in the following editorial, and I feel this matter should be brought to the attention of all concerned, and especially to all Members of this Congress, in order that the disapproval registered by Mr. Cahlan and myself be noted, so that action can be initiated to get the ruling reversed at the earliest possible date.

Mr. Cahlan's letter follows:

LAS VEGAS REVIEW-JOURNAL,
Las Vegas, Nev., August 6, 1958.

HON. WALTER BARING,
House Office Building,
Washington, D. C.

DEAR WALTER: I am enclosing an editorial from a recent issue of Editor and Publisher. This editorial very aptly sizes up a situation which in my opinion could prove disastrous to the newspapers of our State as well as those of the United States.

You will note that the Bureau is disallowing as deductible expense any institutional advertising run by public utilities and Government contractors.

In my opinion this is a roundabout way of obtaining control of the American press which was started in the days of NRA when the Government-suggested code for newspapers contained a paragraph which provided a fine of $10,000 and/or 2 years in prison for anyone who dared criticize the President of the United States or any members of the Federal Government. Of course this was never adopted. Subsequently, bills have appeared in Congress from time to time which would require newspapers to obtain a Federal license the same as radio and television stations. Then there have been the repeated efforts to place a special tax on advertising run in newspapers.

A free press is the backbone of any free people and to me this last ruling of the Bureau is simply for the purpose of eventually taking control in Washington.

Let me point out what happens in Nevada. Harolds Club advertising would not be run because it would not be deductible. Many small papers in the State have survived solely because of this campaign. Many of the papers carry regular advertising schedules from the Bell Telephone Co., from the power companies and gas companies. None of these could run because they are of an institutional nature. I could go on citing many other examples but I think these should suffice.

While the demise of any more Nevada papers would be most regrettable, this is not the most sinister part of the Bureau's ruling. Who determines whether advertising is institutional or not? The internal revenue agents who check your return. Here we have another twilight zone in which agents can lower the boom on those who criticize any program they may have in mind and reward those who keep quiet or support them. It is a very dangerous situation. It means that eventually all advertising will be rejected as a business expense. You certainly can appreciate what that can mean since most businesses operate today on the basis of deductible expenditures.

In short, the Bureau of Internal Revenue, without any act of Congress, has laid the groundwork for silencing or putting out of business the free American press we have known since the founding of the Republic.

I ask you just what you as Representative of the people of the State of Nevada and of the United States propose to do about it? I, for one, am getting increasingly tired of the continuing and ever-expanding dominance of the American business and the American people by the hired hands in Internal Revenue. You as a Member of the Congress of the United States of America are the only source of relief. At the risk of creating a bit of indignation on your part, I must ask this question: Are the Members of the Congress fearful of reprisals by the Internal Revenue department if they make anything more than a token effort to release the hand at the throat of the American people which is slowly but surely stifling the liberty and freedom we have cherished from 1776 down to the present day.

I will await with interest your comments.

Sincerely yours,

AL.

[Editorial in Editor & Publisher]

AD EXPENSES DISALLOWED

The official drive against institutional advertising as an allowable expense for income tax purposes has spread from the Internal Revenue Service and the Federal Power Commission to the Renegotiation Board.

The FPC has struck down advertising expenses of private utilities as a factor in determining cost of operation for the purpose of ratemaking. The IRS has ruled that advertising placed by utilities to publicize the importance of privately operated taxpaying companies versus Government-controlled power companies is not deductible as business expense for tax purposes.

The IRS has also taken steps to disallow the plant city advertising of Timken Roller Bearing over a period of years.

The latest move in Washington is an order by the Renegotiation Board to strike out $300,000 in advertising expenses of Boeing Airplane Co. which had been charged to the cost of performing defense contracts. If previous procedures are followed IRS will probably act to disallow the same sum.

This three-pronged attack against institutional advertising may spell the doom of that important technique whereby business and industry have attempted to explain themselves to the general public to create favorable corporate images.

We think that institutional advertising is a valuable tool of public relations. It is vitally necessary to some companies like Boeing that do not sell anything directly to the public. It is just as important to others like private utilities to protect themselves against Government competition. It is important to companies like Timken to convey the thinking of management to employees and the community.

Leaders of organized advertising must carry this fight to Congress if Government agencies continue to lay down their antiadvertising rulings.

Great Future for the Panama Railroad

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Panama American of July 31, 1958:

George M. Smith, manager of the Panama Railroad for the past year, left the Isthmus today. And his parting words as he walked up the gangway of the Panama Line's *Cristobal* bound for New York were:

"Anyone who says the Panama Railroad is redundant and should be closed down is a chump. There is a great economic future for the railroad, both for expanding Panama and for the Canal Zone."

Smith was loaned to the Panama Railroad a year ago by the Pennsylvania Railroad to give a shot in the arm to an enterprise which former Gov. John S. Seybold, among others, had recommended be consigned to the scrap heap.

Congress did not go along with the recommendation, and in Smith's year the railroad has been put back on the track.

The operating loss has been reduced by more than half according to indications of the 1958 fiscal year figures, the railroad division announced today. The operating loss during fiscal 1957 was $252,912.

There was an increase in revenue with increased freight tonnage and passenger load during the past year and at the same time an improvement in the condition of the railroad's equipment, track, and right-of-way.

How has Railroader Smith achieved all this in the face of significant wage increases and higher cost of fuel and other items?

"There's no magic about it," he said today. "As far as I am concerned it is just a matter of railway practice properly applied, plus efficient organization and the fact that everyone has pulled together."

He added: "The morale of the staff is much better now. They feel they are running a worthwhile service. The railroad does not exist to make a profit. It should break even and it is coming much closer to doing that now."

Smith has been recalled by the Pennsylvania Railroad and has been appointed superintendent of transportation, Pittsburgh reach, in Pittsburgh. He is a native of Virginia and a graduate of Virginia Polytechnic Institute.

He will be succeeded as manager of the Railroad Division of the Transportation and Terminals Bureau in the Canal Zone by Rich-

ard E. Pinkham, formerly superintendent of equipment of the Pennsylvania Railroad at Baltimore.

He spent several days here in July familiarizing himself with the Panama Railroad, its equipment, and its operation.

The Oregon Trail Revisited

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, I want to speak briefly today about a unique undertaking of modern times.

For several months an energetic group of Oregonians has been ironing out the many problems which confront a reenactment of the crossing of the plains by Oregon pioneers 100 years ago.

On to Oregon Cavalcade is the official name selected for the wagon-train project which will follow as closely as possible the Oregon Trail. In many places it will retrace the actual path of the stalwart adventurers of a century earlier.

In mid-April of 1959 the wagon train will leave Independence, Mo., on its first leg across some 2,000 miles to Champoeg State Park in Oregon. Its arrival time is August 1. During the months on the trail the caravan will pass through parts of Kansas, Nebraska, Wyoming, and Idaho before arrival in Oregon.

On to Oregon Cavalcade, Inc., is a nonprofit corporation formed for the sole purpose of the organization, administration, and conduct of an authentic cross-country expedition.

Purpose for this trek is to properly, authentically, and colorfully celebrate and commemorate the cross-country emigration of settlers to the Oregon Territory and publicize the 100th anniversary of the admission of the State of Oregon into the Union of the United States of America in coordination with the Oregon Centennial Commission.

According to information I have received concerning the upcoming journey, it is jointly sponsored by the Oregon State Junior Chamber of Commerce and the nonprofit corporation, On to Oregon Cavalcade, Inc.

Months of preparation have been devoted to this project. The South Lane Stamp Society, Inc., a nonprofit civic organization of Cottage Grove, Oreg., is participating in the adventure through the production of the Official Cachet Cover, a souvenir illustrated envelope, commemorating the crossing. The society has envelopes for distribution to the general public.

These envelopes will be carried in the covered wagon train. Special permission for this delivery has been given by the Post Office Department. As stamp society President Ivan C. Hoyer notes:

This mail will be the first official United States mail to be carried over the Oregon Trail by covered wagon in nearly 100 years.

Appearing on the official cover will be the reproduction of an original sketch by Oregon artist Robert S. Drenner. Fillers detailing the history of the wagon trek and highlighting Oregon history will be enclosed.

Wagons of the train will be drawn by two horses. The actual cavalcade will be in two parts—the horse-drawn and a motorized escort of trucks, field kitchens, jeeps, sanitary facilities, and manpower for taking care of the expedition.

The trek has been endorsed by State officials and the Centennial Commission. I have not received word that available wagon space has been reserved, but interest in the overland journey is mounting and the end of the trail will not mean the end of the individual wagons. Each may be displayed in a frontier town exhibit at the Oregon Centennial Exposition and International Trade Fair in Portland.

It is impossible at this time to give credit to all the men and women who have worked to make the project possible. Enthusiastic Oregonians have handled the many problems confronting the trek. The trail ahead has not yet been completely cleared, but I want to commend the trail boosters and particularly a young Roseburg man, Mr. Alan B. Knudtson, for this project. Alan is chairman of the On to Oregon Cavalcade. His interest in history is well known.

Oregon's 100th birthday celebration next year grows bigger and better each day. I hope many Members of Congress will find it possible to participate.

Resolution Approving Title IV of Senate Bill 4035 as Passed by the United States Senate, 85th Congress, 2d Session

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. HOLIFIELD. Mr. Speaker, under lease to extend my remarks, I include in the Appendix of the RECORD, a resolution adopted by the Housing Authority of the City of Los Angeles, Calif., approving title IV of Senate bill 4035:

Resolution No. 2572

Whereas on July 11, 1958, the United States Senate passed S. 4035 known as the Housing Act of 1958; and

Whereas the provisions of said act entitled Title IV—Low-Rent Housing, is of direct interest and concern to the administration and operation of this authority; and

Whereas the enactment of said title would provide substantial administrative savings to both the Public Housing Administration and this authority; and

Whereas the enactment of said title would clearly define and establish local responsibility for the administration and operation of the low-rent public housing program as originally intended by the Congress of the United States in enacting the Housing Act of 1937 as amended; and

Whereas said legislation, has, by experience, been demonstrated to be absolutely necessary if said low-rent public housing program is to be administered and operated in accordance with the needs and policies of the local communities in which said programs are located: Now, therefore, be it

Resolved by the Commissioners of the Housing Authority of the City of Los Angeles, Calif., as follows:

1. That the Housing Authority of the City of Los Angeles, Calif., approves, in principle, the provisions of title IV, S. 4035, known as the Housing Act of 1958, as passed by the United States Senate and strongly recommends its adoption by the United States House of Representatives and its approval by the President of the United States.

2. That copies of this resolution be forwarded to Mayor Norris Poulson, the Housing and Home Finance Agency, the Public Housing Administration, United States Senator WILLIAM F. KNOWLAND, United States Senator THOMAS H. KUCHEL, and all Members of the House of Representatives from the Los Angeles area.

3. That the executive director be, and hereby is, authorized and instructed to take such administrative action as is legal and proper to secure the enactment of this legislation.

Adopted: July 15, 1958.

Eulogy of Hon. A. O. Stanley

SPEECH
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mr. SILER. Mr. Speaker, announcement has been made today of the death of Hon. A. O. Stanley, one of my eminent fellow Kentuckians and a former Member of the House of Representatives for a period of 12 years, he having served in this body from March 4, 1903, to March 3, 1915. This announcement has been received with real sorrow by his relatives and friends and those who were closely associated with him over a long period of years.

I remember Mr. Stanley as the wartime Governor of Kentucky during the days of World War I. Also, I remember him as one of the most gifted orators I have ever been privileged to hear on a speaker's platform. He was a master of rhetoric and eloquence and on many occasions was able to hold an audience spellbound for an hour or more with his speechmaking talents. Another characteristic of his was his ability to walk with common people and understand their outlook and problems.

He and my father were friends even though they belonged to different political parties and had different attitudes on various matters. But I suppose their friendship was probably based on the humble beginning of each of these two men, Mr. Stanley having been born and reared as the son of a humble minister of the gospel in Kentucky and my father

having been born and reared as the son of a humble mountain farmer of Kentucky.

Many outstanding and distinct honors were bestowed upon Mr. Stanley during his lifetime and he had the high privilege of serving, in addition to his years in the House of Representatives, as Governor of Kentucky, and as a United States Senator from Kentucky, and finally as an official in a quasi-judicial body here in Washington during the latter years of his life. And now that he has gone from us we would express the fervant hope that he may have gone to join that choir invisible of those immortal dead who will live forever in a life planned by the Lord for all the just and the redeemed of God's family. As Christians, we know that life everlasting comes through the love, grace, and redemptive power of God Almighty. As one writer has well said:

The love of God is greater far
Than tongue or pen can tell;
It goes beyond the highest star
And reaches to the lowest hell.

When we think of our friends that we have loved long since and lost for awhile, we can always remember the omnipotence of the Creator of this world and the unchanging character of His grace toward all those who belong to Him through faith. This thought has been eloquently expressed in the words of one of our great hymns:

Oh love that will not let me go
I rest my weary soul in thee.
I give thee back the life I owe
That in thy ocean depths its flow
May richer, fuller be.

Oh light that followest all my way,
I yield my flickering torch to thee.
My heart restores its borrowed ray
That in thy sunshine's glow its day
May brighter, fairer be.

Oh joy that seekest me through pain,
I cannot close my heart to thee.
I trace the rainbow through the rain
And feel the promise is not vain
That morn shall tearless be.

Oh cross that liftest up my head,
I dare not ask to fly from thee.
I lay in dust life's glory dead
And from the ground there blossoms red
Life that shall endless be.

Mr. Speaker, I would like to extend to the surviving members of Mr. Stanley's family my sincere sympathy on the occasion of the passing of this eminent Kentuckian who held various positions of great honor in my native State during the years of this past generation.

Hon. Augustus Owsley Stanley

SPEECH
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. CHELF. Mr. Speaker, I wish to comment on the great loss of former Congressman, Governor, and Senator, Augustus Owsley Stanley, who passed away at age 91 at his home here night before last.

Senator Stanley's career was a long and distinguished one. He was born in Shelbyville, Ky., which is located in the great Fourth Congressional District, which I have the honor to represent here. He graduated from Centre College, Danville, Ky., which is also my alma mater, and later was a member of the faculty of Christian College in Kentucky. In his spare time he studied law, and was admitted to the bar in 1894.

His political career began in 1900, when he was a Presidential elector on the Democratic ticket of William Jennings Bryan and Adlai E. Stevenson. Two years later, he was elected to Congress from Kentucky's Second District and was returned in the five succeeding elections. During his 12 years as a Congressman, he came most into public notice during his investigation of the United States Steel Corp. In 1915, he was elected Governor of Kentucky, served through World War I, and was elected to the Senate at the war's end. When he ran for a second term as Senator in 1924, he was defeated under the Republican avalanche in which Kentucky, for the first time, voted for a Republican President.

Senator Stanley remained in Washington where he established a law practice. He was appointed by Herbert Hoover to serve as head of the International Joint Commission, created to settle disputes arising along the United States-Canadian boundary, from 1930 until 1954. He retired at the age of 86.

Senator Stanley was not only one of the most colorful individuals ever to pass across the stage of Kentucky politics but what is more, he was known to be one of the greatest, if not the greatest, silver-tongued, golden-throated orators of his generation.

As an example of his raw courage, honesty, convictions, and his great oratorical ability, he saved the life of a colored man about to be hanged by a mob. When the Governor heard of the mob and the fact that they were about to storm the jail and hang him, without benefit of State militia, guards, or personal aids, he dashed alone into the town, mounted a platform, and spoke to the crowd. At first, he could hardly be heard above the roar and din but he literally outshouted the seething group which was so overwrought. When his voice finally carried over the noise and "yack yack" of the mob, his first words were:

As your Governor, I have sworn to uphold the laws of Kentucky—that I shall do and if you are going to hang this Negro, then you will have to hang your Governor first.

He then proceeded, after the crowd quieted down, to give them a lesson in government, decency, and morals. Fact of the matter is, the leader and the ringleaders of the mob were actually in tears—with this, the crowd quietly and ashamedly dispersed and order was restored.

The Nation has truly lost an able legislator, one who served with great honor and ability, not only in the House of Representatives, in the United States Senate, but in addition thereto, served his native and beloved Commonwealth of Kentucky as Governor extremely well. If the life of A. O. Stanley could be emulated, even in a small sense, by those of us here today and by those who will follow in years to come, what a wonderful world this would be. He was a Christian, a great lawyer, an outstanding statesman, a fearless leader, a fine husband, a devoted father, and one of our greatest citizens. He was an all American.

I extend my deepest sympathy to his beloved wife, two sons, and the other members of his wonderful family.

Flight From the Dollar

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mrs. ST. GEORGE. Mr. Speaker, as this session of Congress rolls toward its merry close, appropriating more and more dollars and adding deficit on top of deficit, it might be well to stop, look, and listen.

There are signs and portents that are not good. There are increasing reasons to believe that our own people are losing confidence in their dollars and their dollar's value.

The following article from the Wall Street Journal gives us plenty of food for thought. Our thoughts are not very cheerful, but there is yet time to heed the warnings and prevent the runaway inflation that has wrecked so many economies already, and can even wreck our own:

FLIGHT FROM THE DOLLAR

One of the more puzzling things around Wall Street these days has been the sharp, upward march of the stock market in the face of lower earnings, reduced and sometimes omitted dividends. And as brokers, economists and other commentators seek an explanation, we hear more and more often a very ominous phrase.

A few examples will illustrate many. The E. F. Hutton Co. thinks the rising stock market and declining bond market "underscores the flight from the dollar." Reynolds & Co. comments that last week "the flight from the dollar, which has been gathering momentum in recent weeks, turned into a stampede."

The same note is struck across the country. Wayne Hummer & Co. of Chicago observes that the "answer can be that investors have more confidence in the future value of stocks than they have in the dollar's stability." And the market comment of Daniel Reeves & Co. of Beverly Hills, is both pointed and poignant: "It is sad but true that few people any longer believe that our currency can ever be worth more in terms of buying power and most likely will ultimately be worth considerably less."

Now admittedly many market comments are not necessarily compendiums of wisdom. Still, brokerage houses are by the nature of their business close to people who are concerned about how to manage their savings for an uncertain future. And when they

note, with so much unanimity, such a strong feeling of fear about the dollar then it is surely time to pay attention.

In this instance, too, the feeling is confirmed by the figures on what people are doing. The bond market, including the market for obligations of the United States Government, has been depressed. Plainly the generality of people do not want to lend money to their Government. They know the Government will pay them back dollar for dollar with interest. What they fear is that they will be paid back with eroded dollars.

Moreover, the economic figures from Washington suggest that the people's fears are not unfounded.

The already huge Government debt is again being lifted; the deficit this year alone will be $12 billion or more. Getting the money for this deficit would be a terrible problem anytime. With a country already inflation-conscious, it is almost an insurmountable problem. The Treasury is very likely to find that it can borrow little, or nothing, from the public savings; it may well have to turn to the Federal Reserve to create all the necessary credit dollars in the banking system. And almost everyone knows nowadays that this is just a fancy way of printing money.

Finally—and this is the saddest part of all—the political facts of Washington suggest that nobody is going to do anything about it. The President warns sternly about the dangers of inflation, and approves a budget that can only make more inflation. Congressmen talk sorrowfully about the terrible thinks that inflation does to people, particularly the little people, and casually build the budget bigger.

The basic problem of inflation is not new. But what is suggested by these scattered and independent market reports is that the people may be developing a new attitude toward it. There is a strong suggestion that people generally are beginning to abandon hope that those appointed to manage their Government will halt inflation, an implication that the country may come to accept the rotting of the dollar as being as inevitable as death and taxes.

And that is why we think Washington had better heed the ominous tone in these reports. For though this country has suffered from its past inflations, all those troubles will be as nothing to what we shall have to bear if the people, privately and quietly, once get it into their minds that they can no longer put any trust for the future in the dollars of the United States.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from Charles B. Shuman, president of the American Farm Bureau Federation:

ROBERT D. HARRISON,
United States House of Representatives, Washington, D. C.:

The Farm Bureau cannot support legislation (1) giving any Secretary of Agriculture the breadth of discretion for setting supports that is contained in the proposed House farm bill; and (2) providing for artificial minimum price-support levels. This latter provision is particularly indefensible when applied to noncontrolled crops like corn and feed grains while other crops with the same minimum price-support levels are subject to marketing quota controls.

CHARLES B. SHUMAN,
President American Farm Bureau Federation.

Let's Look at Al Ullman's Part of Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, we Oregonians are proud of our State and its infinite variety of natural beauty spots. The long and scenic coastline is dotted with public beaches. Oregon's mountains provide an endless challenge to those who seek climbing adventures or who merely like to hike.

Recently four of my able colleagues were appointed members of the National Outdoor Recreation Resources Review Commission. They will serve on a bipartisan commission established to study the recreation potentialities of the Nation's forests, parks, and other public lands.

The work before these men grows bigger each year. National interest in outdoor recreation facilities is growing rapidly. The need for development and expansion of today's facilities is clear. The job of commission members will be arduous and time-consuming.

The Commission members from this House come from Oregon, AL ULLMAN; Arizona, JOHN J. RHODES; Idaho, MRS. GRACIE PFOST; and Pennsylvania, JOHN P. SAYLOR.

These Members are certainly aware of the value of planned resource development.

We of Oregon who have seen AL ULLMAN's dedication to work know he is well qualified to make concrete recommendations to the President and Congress as to how present and future recreation needs can best be met. Any recreation time he finds centers on hunting, fishing, and camping.

Most recently his tireless efforts to help produce an effective and acceptable Klamath Indian termination conference report resulted in the saving of priceless timber, wildlife, and watershed resources of a major portion of southeastern Oregon.

The natural beauty of Oregon abounds in all sectors. One such area in AL ULLMAN's Second Congressional District is the Wallowas. Last month the editor of a weekly newspaper in western Oregon told his readers of exploring a part of Oregon new to him. Mr. Hal Schiltz' comments appear in his editorial, A Beautiful Part of Oregon, which appeared in the Myrtle Creek (Oreg.) Mail of August 3, 1958:

A BEAUTIFUL PART OF OREGON

For the first time in 10 years, the publisher and his wife have had the pleasure of 2 weeks vacation together thanks to confidence in a present hard-working and worthy staff. And this important event was celebrated by seeing a new part of Oregon for us, the Wallowa Mountains of northeast Oregon. From conversations since, we know many other friends and neighbors have never visited this Alpine fastness, and we commend it to your attention.

The Wallowas have been underpublicized to date, and remain primitive, for exploration, but in this lies their great attraction. For our money, they far outglamor the much publicized Grand Tetons, much of the Cascades, and Sierra Nevada vistas. Cut off from normal highway travel by rugged mountains and the Grand Canyon of the Snake River on the Idaho side. And a remote area from the wheat fields and ranch lands of the Baker-La Grande-Walla Walla crescent, they remain removed from most tourist visiting. We saw only one California car in our tour among the mountains and only a few from Washington. The most visitors were Oregonians, like us, visiting just another beautiful part of the State, of which we have a grand diversification about which we are prone to remain too silent.

This situation is really fine with us. We think that maybe it would be a good idea to sort of "fence in" the Wallowas and keep them for Oregonians and their guests. Where else in the State is the daily trout bag limit 30 fish? Hunting lodges of that area boast 100 percent kill for deer and elk.

Large and beautiful Wallowa Lake itself remains relatively clear of personal home and tourist facility encroachments. Interestingly formed by glacial age lateral and terminal moraines of the Pleistocene geological period, it remains more than normally unsullied by human encroachment its greatest service still the provision of needed water to semi-arid agricultural lands nearby.

To really get around in this area, you need to employ pack horses, unless you want to do it the hard way and back-pack, but we found both ways worthwhile as we delved its mountain fastness depths along three of its main rivers—the Minam, the Lostine, and the Imnaha.

If you are vacation bound and wondering where to go, we feel that we can unhesitatingly recommend the Wallowas to fellow Oregonians. But be prepared to camp and rough it. That's the way the Wallowas are at their best.

Those who are interested in our personal trials and travails and experiences and comments on same will find them in "Chips."

Lieutenant General Quesada, War Hero, Helps Airlines in Peacetime

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column which appeared in the U. S. News & World Report of August 15, 1958, on Lt. Gen. Elwood R. (Pete) Quesada, USAF (retired), special assistant to the President for aviation matters and head of the Airways Modernization Board:

WARTIME AIR HERO HELPS AIRLINES IN PEACE

A military flier spoke up for the commercial airlines in Washington last week. Lt. Gen. Elwood R. (Pete) Quesada, USAF (retired), special assistant to the President for aviation matters and head of the Airways

Modernization Board, told the President that airlines must make more money if they are to stay modern. The general made his statement in the form of a report, and President Eisenhower has passed it along to Congress.

The 54-year-old general, a combat flier in World War II, an explorer and soldier-diplomat, has a reputation for daring. In transmitting his report to the President, General Quesada sustained the reputation by tackling some delicate problems head on.

One touchy problem the general dealt with was the operation of the Civil Aeronautics Board. General Quesada wrote, "The Civil Aeronautics Board must examine the carriers' proposals [for rate changes] promptly. * * * A pending CAB proceeding relating to domestic passenger-fare levels is not due for decision until March 1959. By that time, the success or failure of major segments of the equipment program may well have been determined."

Another of aviation's hot potatoes, the growth of the Military Air Transport Service into a worldwide passenger service, got this treatment in General Quesada's report: "The Air Force unjustifiably discounts the national-defense potential for immediate readiness of the airline industry."

General Quesada is known as an officer who liked to lead his forces into combat himself in wartime. In peacetime he seems to retain the trait.

Sixteenth Annual Report to Constituents of Fourth Congressional District, Nebraska, by A. L. Miller, Member of Congress

---

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. MILLER of Nebraska. Mr. Speaker, during the 16 years I have been privileged to serve in the Congress, it has been my custom to render a report to the people I represent at the end of each session.

I believe that every Member of Congress should do just that. If we are to continue to have good government we need an informed public.

I have tried to keep the voters of the Fourth District of Nebraska acquainted with my activities in Congress. I do this through a weekly newsletter to some 80 papers and a weekly radio broadcast. When Congress is not in session, I drive about 9,000 miles in the district seeing as many groups as is humanly possible.

In off-election years I hold a "youth wants to know" clinic for the public in all the county seat towns. These are question-and-answer periods in which I try to give information as to my stand on many questions before the Congress. I can tell you the youth and adults of America asked some keen, penetrating questions.

I have never dodged a vote in Congress or an answer to a question. It is not possible, Mr. Speaker, for everyone to agree. People who disagree with me may be right and I may be wrong but they are entitled to know how I voted and how I feel on all public questions. You and I live in a world where honest and sincere men and women can and do differ in their conclusions on public questions. We would not have it any other way in America.

There are many times when the proposed legislation seems to be of a doubtful nature. Some appears to be 51 percent good and 49 percent bad and vice versa. Legislation must be examined carefully and then I try to vote according to my conscience. As you know, Mr. Speaker, I am in the upper 5 percent of those answering the most rollcalls. I am not a rubber stamp. Any mistake I have made has been of the head and not of the heart.

COMMITTEE WORK AND SENIORITY

I am the ranking member on a committee important to Nebraska, the Interior and Insular Affairs Committee. This committee handles about 22 percent of all the bills the President signs. Bills are perfected in committees. The committee meets every day. I am always in attendance. I am also a member of the policy committee that meets every week and several times a year with the President and his Cabinet.

Seniority means a good deal and pays dividends. Because the southern Members seldom have opposition they return year after year and get positions of authority and chairmanships when their party is in power.

I was the chairman of the Interior and Insular Affairs Committee in the 83d Congress. I am now ranking member on that committee and a Republican victory would make me chairman again.

The record shows that of the 435 Members in the House of Representatives there are only 20 Republicans and 37 Democrats who have served longer than I have served. Seniority is always recognized in both parties.

TWO STRONG PARTIES

This has been a difficult session partly because of the fact that American politics are formed upon the basis of two strong political parties. There are nations where there is only one party. There is no choice for the people. Then we have nations like France that have 17 or 18 splinter parties in which no one party has the majority. Here in America and in the Congress you are either a Democrat or a Republican. There are no Independents. We have all shades of opinion among those who represent the Democrat and Republican parties. This administration has been a Republican administration. The Congress which is Democrat has control of all committee chairmen and all legislation. The Rules Committee, made up of 8 Democrats and 4 Republicans, certainly controls legislation that comes to the floor of the House.

BILLS INTRODUCED

More than 13,000 bills have been introduced in the 85th Congress. I was successful in getting for Nebraska flood control approval of the Gering-Mitchell area, money for the Ainsworth and Farwell Irrigation Districts and for Glendo Dam and Fremont Canyon. The mid-State reclamation bill was reported from the subcommittee and several watershed bills were reported. There are some people who criticize putting money into reclamation and flood-control projects like the mid-State, Farwell and Ainsworth projects. To me they represent an investment in the resources of this country. The money is all paid back over a period of years. The construction of the Gering-Mitchell flood-control projects would save thousands of acres of good land from destruction of continuing floods. Actually the crops raised do not add to the surplus. Wheat for instance is not an irrigated crop.

On a national basis, I introduced legislation which has passed to control chemicals in the food we eat, to give our parks a wider use for recreation and, as this is written, I believe my bill on the use of surplus farm products for industrial use will be passed. There were a number of minor bills and resolutions of a private nature introduced by request of the Secretary of Interior.

VETOES

The President has found it necessary to veto a number of bills. I think he was right in vetoing the huge pork barrel public works bill. He was right in vetoing the bill which would provide for a ship known as the atomic ice breaker. He may veto a military bill which has money for 142 armories not asked for and calls for $1 billion of additional spending which the military say they do not need. I believe he will veto the huge public housing bill and the community facilities bill which together would call for several billion dollars of additional spending. To date more than $3 billion has been added to bills reported by the Rules Committee and passed by the Congress that the President did not want.

Mr. Speaker, there are a dozen bills waiting for a rule which if passed would raise deficit spending about $8 billion. There are powerful groups like the ADA, the liberal Democrats and a few Republicans who are insisting on more and more spending. It is my opinion that a number of these high spending, inflationary bills will and should be vetoed by the President if they are passed by the Congress.

I voted against all of this unnecessary and unwanted spending. I voted against raising the debt limit. There are several departments of Government with some many billions of unexpended balances. It seems that instead of borrowing more they should use these unneeded funds to pay off the debt and not increase it. The way to balance the budget and to halt inflation is to stop this unnecessary spending.

INFLATION

With increased appropriations that the administration did not ask for, this country is confronted with a big dose of inflation. I believe it is the most serious thing Americans face. It can destroy just as much as a military defeat. The erosion of the dollar eats at all pensions and savings accounts. The President has warned repeatedly that the spending he has not asked for would lead us down the road of inflation. That is another reason I voted against new un-

necessary spending and the raising of the debt limit.

AGRICULTURE—FARM BILL

It has been almost impossible to get a satisfactory agricultural bill adopted. This comes about partly because the 3 or 4 farm organizations are not in agreement upon any legislation. It comes about because the membership of the Agriculture Committee have been somewhat at loggerheads, arguing what commodity should get a preferred position in the bill. It should be remembered that of the 19 committees in the House, 13 of the chairmen come from the South or border States. There are 14 Democrats with the most seniority and they are all from States below the Mason-Dixon line. The House Agriculture Committee has 8 ranking Democrats who are from the South.

I voted for both farm bills as they came from the Senate and House hoping they could be improved in conference. Most legislation is a matter of compromise that comes out of conference. The agriculture program must provide the farm folks with their fair share of the national income. They must have opportunity and freedom with as little Government control as is possible.

I have not always agreed with the administration on some of their legislation. I could not go along with the huge foreign aid bill or the Federal aid to education, or upping the pay and time to 39 weeks for unemployment compensation insurance. I have not always agreed with the Secretary of Agriculture, Mr. Benson. I thought he was wrong in opposing legislation to make alcohol and industrial products out of our surplus crops. I thought he was wrong when he took entire farms out of production without consulting anyone from Nebraska, and then quickly reversed himself. I thought he was wrong when he rolled back the price of wheat about 22 cents a bushel and kept cutting the acreage that raises high gluten and protein wheat.

I have said all the time that there is no man in the Cabinet that has a higher integrity, honesty, sincerity, and strong character than Secretary Benson. I might add he is also stubborn. I have supported the administration and the Secretary in about 85 percent of their program. While I am a Republican, I believe I am on the conservative side. I could never be a rubberstamp for any one or any group.

Fortunately in Nebraska and the Midwest farm income is rising. It may be 25 percent higher than 1957. The price paid for crops may be lower but there is greater abundance which brings smiles to farmers and to businessmen who must sell to farmers.

Mr. Speaker, there are some who are trying to make political capital out of the farm situation, out of depression and out of the Russian sputniks. They use the sputnik and this phony depression to force through unwise legislation and unneeded spending. In Nebraska there is no depression. People grin at you when you talk about a recession. While the acres and the price have been cut on basic farm crops, Mother Nature has smiled upon the farmer and more bushels have been grown. This means more dollars in the farmers' pockets, more prosperity for the community. This is so much different than the desperate drought of 1956 and 1957.

I introduced legislation for the conversion of grain into industrial alcohol and for industrial uses. I believe that research is one method that will help us solve our huge surpluses. This country has spent hundreds of millions of dollars to learn how to produce more on less land and with fewer farmers. We have not completed sufficient research work to know how to use our surpluses wisely.

The stockgrowers have their problem solved. They do not need or want Government subsidies. Proper utilization of the grain surpluses will place the corn and wheat farmer on the same basis as the livestock raisers.

FOREIGN-AID PROBLEMS

I am glad to see a partial meeting of foreign diplomats at the summit. I do not believe there will be another major war. I believe in talking our problems over around the conference table. When they are talking they are not fighting. It does seem that Russia and the Communists will continue the cold war. Russia cannot be trusted. She has made 37 agreements with this Nation and the world and has kept only 2 of those agreements. This Nation must have a defense that is strong enough to discourage any aggressor. I am hopeful that we can proceed properly with the fuller use of the atomic reactors for peaceful uses.

Our foreign aid for the past 10 years has been largely a waste of money. We cannot buy friendship. I will continue to follow the procedure I have always followed to vote against foreign aid except for food, medicine, and clothing for needy people. I believe we need an immediate reevaluation of our foreign aid giveaway program. Perhaps loans instead of gifts will be the answer.

TAX RELIEF

It had been my fond hope when this current year started that we could have a tax reduction, pay a moderate amount on the public debt, and still balance our budget.

My hopes were soon overturned. Demands of the Defense Department were higher than anticipated. A restless world made it imperative that our Nation stand prepared for a war which we hope will never come. The unbalanced budget comes about because of increased military spending and spending not asked for by the President. Some relief from taxes was given to small business and on certain excise taxes.

LABOR LEGISLATION

I am disappointed in the type of labor legislation passed thus far by the Congress. I had hoped for approval of these points:

Legislation to assure honest elections in labor unions.

Legislation to protect union welfare and trust funds.

Legislation to eliminate the secondary boycott and sympathy strike.

Legislation to place the larger unions under antitrust and antimonopoly laws and protect the workingman.

Passage of a right-to-work law.

The Senate Rockets Committee has uncovered many unsavory practices by union racketeers to which the honest laboring man has little defense. Laboring men need help to clean up their unions. He is forced to make political contributions often against his will. Labor has helped elect, by contributions and endorsement, 175 Members of Congress. Only two are Republicans. Labor leaders have been rather brazen in their demands on those they have helped. The Hoffa-Reuther labor leaders openly boast about controlling in the next Congress more than 200 Members. This is not good for America.

FEDERAL AID TO EDUCATION

It remains my conviction that education belongs at the local and State levels. I believe that communities can build, maintain, and operate their own schools cheaper and better than under the Federal Government.

VISIT HOME

As usual, I will be in Nebraska after the Congress adjourns. I go home every fall, election or not, so that I may chat with people about their problems, visit the county fairs, speak to service clubs and other organizations. There is no substitute for face-to-face talks with the people whom you represent in Congress. I look forward to seeing many of you this summer. In the meantime, please feel free to write me anytime at 1025 House Office Building, Washington 25, D. C.

Matter of Fact

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Tom Cawley which appeared in the Sunday Press of Binghamton, N. Y., on August 10, 1958.

MATTER OF FACT
(By Tom Cawley)

A little of the old Jim Farley flashed through the political cliches during the week, and it seemed like old times. Farley, running for the Democratic nomination for the United States Senate, never was what you'd call a firebreather, even at the peak of his political career (1932–40), but his talent for needling is vast.

He called Ed Dickinson the "mosquito candidate" of the Harriman administration. With deadly kindliness, he suggested Tom Murray, another candidate, couldn't write a class composition on How To Run for Office.

He applied the ancient and honorable technique of not throwing a needle at Governor Harriman directly, but accused him by implication of walling himself off from his old friends by having an ambitious clique guarding the outer portals of the Governor's chamber.

Farley isn't coming out swinging in his grab for the nomination, but he's warming up his old political muscles for a bit of Indian wrestling before the delegates' votes are counted.

Farley's technique is composed of behind-the-scenes strategy in getting a nomination for anybody. In elections, his strategy is plain and simple. He shakes everybody's hand and remembers everybody's name. It's a formula nobody can improve on.

In contending that some of his old political friends want to endorse him publicly, but are afraid of reprisals from the current ruling Democrats at Albany, Farley is giving voice to one of the firm tenets that has guided him in politics.

"Many people," he said recently, "proceed on the theory that they got into positions they occupy on their own power, forgetting the fact that as they went up the stairs, there were people helping them along the way and making sacrifices for them."

Farley believed that Franklin Roosevelt had violated this tenet when he ran for a third term. In a wracking decision, Farley, who got F. D. R. to be President, broke with the old champ. It was a nerve-shattering decision for him, but he had to do what he believed was right.

The liberal Democrats—who up to that point had loved good old Jim—jumped all over him for what they called his fatal defection.

The old-line Democrats stayed with him. Whether there are enough to put him over at Buffalo is a big question.

But the old Farley magic still is evident. Even today, name-droppers love dropping Jim Farley's name more than any other name in politics. A telephone call from Farley is something that you've got to mention to your friends. A postcard is a small compliment sent by one of the master politicians of his time.

Big, smart, well known, well informed, with a pair of eyes that have seen every conceivable type of political doublecross and chicanery, Farley is making his final attempt for political laurels.

The sentimentalists will be with him. You've got to be with a guy—if you're a sentimentalist—who murmured in 1936, "As Maine goes, so goes Vermont."

Wilderness System

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by W. D. Hagenstein before the Senate Committee on Interior and Insular Affairs on July 23, 1958. Mr. Hagenstein, who is executive vice president of the Industrial Forestry Association, is well qualified to present his views on a bill which would have a great effect on my district in the State of Washington.

His statement concerns S. 4028, which would establish a National Wilderness Preservation System. I agree with him that hearings on this proposed legislation should be held throughout the West to acquaint people with its provisions and to get their views, especially in my district and the State of Washington where forestry is so important to our economy. I know from the many letters I have received many persons are deeply interested in this subject.

The statement follows:

STATEMENT OF W. D. HAGENSTEIN, EXECUTIVE VICE PRESIDENT OF INDUSTRIAL FORESTRY ASSOCIATION, ON S. 4028, BEFORE THE SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, ON JULY 23, 1958

My name is W. D. Hagenstein and I reside in Portland, Oreg. I am a professional forester and a registered professional engineer in the States of Washington and Oregon. I am executive vice president of the Industrial Forestry Association which has been promoting constructive forest management throughout the Douglas fir region of western Oregon and western Washington for 25 years.

The Industrial Forestry Association consists of 58 companies engaged in the business of growing and harvesting timber and manufacturing lumber, pulp and paper, plywood, shingles, hard- and soft-boards, and other forest products. Our members own and manage more than 7 million acres of forest land. They operate nearly 250 wood-using plants which employ more than 63,000 people and have an annual payroll of more than $300 million.

The Industrial Forestry Association founded the now nationwide tree farm program in 1941 and to date has certified more than 5½ million acres of privately owned forests as tree farms in our region. We operate one of the West's largest forest tree nurseries as a nonprofit enterprise to provide seedling trees for keeping forest land productive on our members' tree farms. Our nursery has shipped more than 93 million trees since it was established and has 25 million trees growing in it at present. We are also developing better trees through application of the principles of genetics in a substantial research program financed entirely by our membership.

We come before you today to make the plea that before any action is taken on S. 4028, this committee hold hearings throughout the West to acquaint westerners with the provisions of the measure and to get their views. Because the proposal was only introduced in June of this year, it has had little circulation as yet and its provisions are not known nor understood by the people most affected. As you all realize, more than 90 percent of the lands involved are in the West.

In the West, where we have lots of it, land is our basic resource. Without it, man couldn't exist, for with the exception of the relatively small proportion of our total diet which comes from the sea, everything we eat, wear, and consume is a product of the land.

When I speak of the West, I refer to the 11 Western States. In this great area, we have three-quarters of a billion acres of land or two-fifths of the total area of the United States. We have only 23 million people, or 14 percent of our country's total. More than half our people are in California. In only three other States do we have more than a million.

A third of our land is forest, less than half of which is now considered to have commercial timber-growing possibilities. We have 59 million acres of cropland, 400 million acres of grazing land and nearly 50 million acres occupied by cities and towns and rights-of-way for highways, railroads, powerlines, pipelines, canals, aqueducts, and other means of transporting products of the land to the consumer.

Obviously, land is the basis of our Western economy. The annual value of all farm products is nearly $5 billion. Minerals produce $3.3 billion, forest products $3¼ billion and our tourists are reckoned to spend $2 billion. These land-based industries produce the basic income for all westerners. People who live in our cities and towns are apt to overlook this if they work in supermarkets, department stores, drug stores, service stations, banks, hospitals, garages, insurance offices, theaters, or any of the thousands of other service establishments. And this goes for public officials too, because county, State, and Federal taxes all originate in the land. It's a fact that farmers, miners, loggers, sawmill hands, construction workers, sheepherders, and cowboys are the ones whose activities start the dollars rolling toward our cash registers. All of these basic economy producers are so engaged to satisfy the needs and wants of everyone. Take away any part of them in any community and the economy suffers. This is particularly true in the West, with the exception of our few big urban centers where people seem to make their living by trading goods and services with one another, but if the thousands of small communities close to the land weren't funneling their products and payrolls into the cities, the latter would not exist.

Fortunately for the wage earners of the West, every single member of this committee is a westerner and all 11 Western States are represented. I don't know how often this has been true of your committee, but it may be an act of Divine Providence rather than a fortunate coincidence to prevent hasty enactment of legislation like S. 4028 without giving the people of the West an opportunity to understand it and be heard on its proposals.

To give you an example of some of the expressions of opinion on the previous bills to create a national wilderness preservation system, let me cite from the Portland Oregonian for November 23, 1957, when the Association of Oregon Counties, made up of the county judges and commissioners from all the State's 36 counties, was reported to have received a report from its public lands committee which declared, "that the single use concept of Senate bill 1176, the so-called wilderness bill, is contrary to the public interest and asked for its defeat."

This is the kind of grassroots opinion which the hearings held by this committee and its counterpart in the House in the last session of Congress didn't get into the record because hearings were held only in Washington, D. C.

Another example of western sentiment on this legislation is evident in the resolution approved by the Washington State Association of Soil Conservation Districts' meeting at Seattle, Wash., in December 1956 when the following action was taken:

"Whereas the economic development of our States and Nation depends on the maximum ability of national forest lands to produce fiber, water, minerals, game and fish habitat, and recreation for all of the people; and

"Whereas the establishment of excessive acreages of limited use, without adequate consideration of all natural resource values, could have serious effects on local economies and overall public benefits: Now therefore be it

"Resolved by the Washington State Association of Soil Conservation Districts, That before any national forest area is dedicated to a single purpose use a thorough analysis and land management plan be made for the area to assure that the long term benefits of all natural resources are adequately protected; and be it further

"Resolved, That the Washington State Association of Soil Conservation Districts opposes singling out portions of national forest areas for limited use through any proposed act of Congress."

These examples which reflect western thinking, by the people whose livelihood is directly affected by the proposals contained in S. 4028, indicate the necessity of taking this legislation to the West for full public

hearings in every State so that their economy may be adequately represented in the record from which you gentlemen must decide what course of action to take.

Further argument for the necessity of holding hearings in the West on S. 4028, if you will pardon the personal reference, Mr. Chairman, is your statement to the members of this committee in the committe print entitled "Full Development of Public Resources," dated June 16, 1958. You very kindly sent me a copy of this with your letter to Conservationists under date of June 30, 1958. In your letter of transmittal to the members of this committee, you said, "The policies that are pursued in the development of these lands and resources in large measure guide the economic destiny of the West." You were, of course, referring to the Federal lands.

Quoting further from your letter of transmittal to the members of this committee, Mr. Chairman, you said, "The authority placed in our committee for matters affecting public lands requires that we keep informed, and that we keep the public informed, on matters which affect these lands. The growing need to develop our public lands resources requires more adequate information. We need to acquaint the people of our Nation with the tremendous value of the Federal assets belonging to them so amounts budgeted to protecting resources, and amounts of investment made to expand use of the public lands can be related to the value of the assets with which we are dealing and potential revenues and benefits.

We wholly endorse your statement of the need to acquaint the people of our Nation with the tremendous value of the Federal lands belonging to them and what needs to be made in the way of investment to protect and expand the use of their resources. We hope that, as part of your program of acquainting the people of our Nation, you won't forget the people of the West who depend upon the good judgment of this committee in all matters to do with the protection, management, and use of the Federal lands.

Another reason for delaying action on S. 4028 is the recent creation of the Outdoor Recreation Resources Review Commission which is charged with examining the outdoor recreational needs of the country and making specific recommendations as to how they are to be met. Consideration of the present proposal in light of the study which will shortly be underway by the Recreation Review Commission is certainly premature.

I would now like to cite a few facts pertinent in the consideration of S. 4028.

In the West our No. 1 landowner is Uncle Sam. The Government owns more than 400 million acres, or 53 percent of our total area. This means that Federal land policies in a big measure control our economy. How important that makes full consideration of westerners' views on any proposal to modify the management of Federal lands is abundantly clear. Without western hearings, how can our views be adequately transmitted to you gentlemen whose actions on the pending bill may determine the future of westerners yet unborn.

I want to mention a few other pertinent considerations.

Our increasing population, predicted to be 100 million more in 40 years, means increasing pressure on the land. Every acre must contribute all it can to our needs for food, wood, water, wildlife, and recreation. Practical land management emphasizes highest use for each acre but doesn't exclude other uses. There is no question but that in some areas there are paramount uses such as the growing of food crops on agricultural soils, the extraction of ores from mineral deposits, the management of certain areas exclusively for water, and other areas exclusively for recreation because of their scenic wonders and historic values. But most of our land in the West is capable of contributing two or more of these uses simultaneously. For example, a forest, which can be managed for a never-ending crop of wood, provides a permanent crop of water for domestic, agricultural, and industrial use, a continuing habitat for fish and game, in many areas can be used for grazing livestock, and always has many opportunities for picnicking, hiking, camping, fishing, hunting, and noise-free solitude for those who want to get away from it all.

In the West we have 140 million acres of national forests managed under the principle of multiple use. We have 13½ million acres of national parks, monuments and recreation areas, 6.8 million acres of wildlife refuges, and 725,000 acres of State parks. All of these areas are dedicated to recreation in its many forms. Many of them are so developed with roads, campgrounds, trails, and shelters that they are available for all of our citizens for most every outdoor pursuit.

Some of the areas in the national forests are dedicated to exclusive use of wilderness recreationists. Called wilderness, wild, primitive, and limited areas, they are roadless and generally include vast areas of forests, waters and open lands above timberline. They are generally remote and hence accessible to relatively few. Young families with small children can't very well walk 15 or 20 miles into a wilderness, if they want to take the youngsters along. Older people, on the average, haven't the stamina to invade these areas very far. Working men and women don't often have the time or money to explore these areas whose vastness requires either considerable time by foot or an expensive pack trip which few can afford.

These areas also provide a real worry to the Federal forest managers who must protect them against fire and, in some instances, have been up against it when serious insect epidemics have broken out. Not only is it difficult to control fire and insects in these inaccessible areas, but there is a serious question as to the advisability of investing great sums in protection of forests managed under multiple use in Federal or other ownership adjacent to wilderness areas and running the risk of having fires or insect epidemics spill out of the wilderness into the managed areas.

Having been one of the charter members of the Northwest Forest Pest Action Council and, currently, as chairman of the Western Forest Pest Committee which covers the 11 Western States, I know firsthand of the tremendous problems which confront us in saving timber from death over millions of acres from such pests as the spruce budworm. We have been spraying to control it for a decade in the Pacific Northwest and, in the last few years, Idaho and Montana have had to do a lot of it also. Those of you from Colorado and Montana are well aware of the problem of the Engelmann spruce beetle and all of you know of the pine beetles which have been taking their destructive toll for many years in every western State. In many parts of the West today there is more timber being destroyed each year by insects than all that consumed by fire or used by man.

I know from my boyhood experiences in fighting fire in Idaho that we often walked for 20 hours or more from the end of a road to the fireline. Because we were so exhausted after that long a hike with bedroll and tools to pack, we were of little use until we'd had a long rest. And by the time we were able to combat the flames, the fires were no longer small, so we often couldn't control them until either a major change occurred in the weather or the fire consumed all the fuel.

One of the fires I was on, almost 25 years ago, completely destroyed more than 200,000 acres of a national forest which no longer exists, the Selway. Had these areas been accessible, we probably could have minimized the damage and saved great quantities of timber, soil, wildlife, and just plain outdoors for recreation.

I am sure that all of you, flying as you do frequently over your States, know what I am talking about when I suggest that inaccessible areas are extremely difficult, if not impossible, to protect against the natural ravages of lightning-caused fires and the great hordes of insect pests which abound in nature.

No one is opposed to setting aside areas for wilderness solitude. The only question is, can we do it without adversely affecting the multiple-use area adjacent or losing resources necessary for the maintenance of our western economy? Naturally, most of the areas now set aside as wilderness and those proposed are in the West because that's where the Federal lands are. This also limits their use mostly to people in the West because the average citizen from far away neither has the time nor money to explore them by foot or pack train.

May I conclude by again urging that you listen to the many voices in the West, not just those from the wilderness, but to everyone who wants to be heard on this and every proposal which will influence Federal land management. The only way you can do this is to take this committee into the West and hold hearings on S. 4028 in every single State whose jobs and payrolls it will affect.

A Bill To Amend Section 408 of the Federal Food, Drug, and Cosmetic Act With Respect to Fees

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks, I include a draft of a bill dealing with the administration of Public Law 518 passed in the 83d Congress.

It is my considered judgment that legislation of this type should be given serious consideration in the 86th Congress:

A bill to amend section 408 of the Federal Food, Drug, and Cosmetic Act with respect to fees

Be it enacted, etc., That section 408 (o) of the Federal Food, Drug, and Cosmetic Act is amended to read as follows:

"(o) The Secretary of Health, Education, and Welfare may by regulation condition referrals to advisory committees pursuant to this section upon the payment, by the person requesting the referral, of fees to defray the costs arising by reason of such referrals. Such fees, including advance deposits to cover such fees, shall be available, until expended, for paying (directly or by way of reimbursement of the applicable appropriation) the expenses of advisory committees under this section and other expenses arising by reason of referrals to such committees, and for refunds of excess payments. Such regulations may further provide for waiver or refund of fees in whole or in part when in the judgment of the Secretary such waiver or refund is equitable and not contrary to the purposes of this subsection."

Mr. Speaker, this bill is intended to correct an undesirable and inequitable provision in the Federal Food, Drug, and

Cosmetic Act which has placed discriminatory financial burdens and restrictions upon those involved in the manufacture, recommendation, sale, and use of agricultural pesticide chemicals. It would delete certain fee provisions from section 408 (o) of that act.

In 1954, I introduced a bill, H. R. 7125, which was enacted and became Public Law 518 of the 83d Congress. It amended the Federal Food, Drug, and Cosmetic Act by adding a new section 408, which provides for the control of pesticide residues in or on raw agricultural commodities intended for food or feed purposes. It is commonly referred to as the Miller pesticide residue amendment. All parties directly concerned, the Government agencies, the growers, and the pesticide manufacturers are in accord that the law is operating well and effectively and that consumers are receiving an unparalleled degree of protection as a result of it.

At the time the bill was pending before the Congress, it was the announced administration policy that, to the extent practicable, all services rendered by Government agencies were to be put on a self-supporting basis; fees were to be charged wherever possible.

In accordance with that policy, the Department of Health, Education, and Welfare requested that H. R. 7125 be amended to provide for a fee system which would bring in sufficient revenue to cover the costs of the operations of the bill, if it were to be enacted.

The House Interstate and Foreign Commerce Committee rejected the proposed amendment and the bill as passed by the House did not contain a fee provision. The Senate did adopt the amendment, and the House later concurred. The bill as enacted provided that "the Secretary of Health, Education, and Welfare shall by regulation require the payment of such fees as will in the aggregate, in the judgment of the Secretary, be sufficient over a reasonable term to provide, equip, and maintain an adequate service for the performance of the Secretary's functions under this section."

Under the authority of these provisions, the Food and Drug Administration in February 1955, promulgated a regulation which specified a series of fees for the various steps involved in the tolerance setting and review procedure. Without going into all the details of that fee schedule, a few examples will serve to illustrate what has developed since that time. The original fee schedule, announced by the Food and Drug Administration in February 1955, required the payment of $500 for the filing of a petition for the establishment of the initial residue tolerances for any given pesticide chemical and a $50 filing fee plus $50 for each additional tolerance requested later on the same chemical. In September 1955, these fees were doubled to $1,000 and $100 respectively. Last Thursday—August 7—the Food and Drug Administration published in the Federal Register a notice that effective on September 6, 1958, these fees would be raised to $2,500 and $250 respectively. This amounts to a fivefold increase since February 1955.

Under this new fee schedule, if a manufacturer develops a new pesticide chemical and seeks a tolerance for it on a certain crop, he will have to pay $2,500 before the Food and Drug Administration will accept his petition and consider his data. Each time that he comes back for an additional tolerance on another crop, he will have to pay another $500. Some pesticide chemicals find use on a great number of crops. Thus, a considerable amount of money can be involved in getting these important pest control chemicals approved by the Food and Drug Administration so that they may be used by our farmers and growers for the protection of their crops. These fees for FDA approval are ultimately reflected in the prices which our growers must pay for these essential pesticides.

Since approval of a pesticide chemical by the Food and Drug Administration through the establishment of a tolerance or exemption is usually a prerequisite to the sale of that product for use on food crops, the fees charged in connection with such approval, in effect, constitute a tax to do business. It imposes additional and unnecessary burdens on small companies.

The previously mentioned policy of charging fees wherever possible, which led to the inclusion of the fee provision in H. R. 7125, apparently was not implemented to any significant extent and, in fact, appears to have been abandoned as far as this type of food legislation is concerned.

The Poultry Products Inspection Act, Public Law 85–172, passed last year, contains no provision for the charging of fees for the approval of chemicals proposed for use on poultry or in poultry plants.

In 1957, the Food and Drug Administration sponsored a chemical or food additives bill which was introduced by Mr. HARRIS as H. R. 6747. That bill is quite similar in many respects to the pesticide-residue amendment of 1954. It contains no fee provisions except for those instances where petitions for the approval of a food additive are to be referred to an advisory committee. The manufacturer or user of a chemical intended for use in food would not have to pay a fee in order to file a petition and have the Food and Drug Administraton examine the data to establish its safety. This is proper, since the purpose of the Food and Drug Administration's review of the data is the protection of the public health and not the conferring of some benefit upon a particular chemical or food company. After lengthy hearings on H. R. 6747 and other food additive bills, the House Interstate and Foreign Commerce Committee last month reported a new bill, H. R. 13254, which represents that committee's views as to the type of regulation which should be imposed upon food additives.

This chemical additive bill was passed by the House August 13. It had no provision for the charging of fees such as is now being carried out in Public Law 518.

The above facts relative to the Poultry Products Inspection Act and the pending food additive legislation would indicate that it is not the policy of this Congress or of the present administration to require the payment of fees in legislation regulating the use of chemicals in or on food.

It is an injustice to require those who must obtain approval of their chemicals under section 408 of the Federal Food, Drug, and Cosmetic Act—the pesticide residue amendment—to pay fees to obtain such approval while those who would obtain similar approval under the proposed section 409—the food additive amendment—would not have to pay such fees. The two sections are similar in requirement and in operation. The Food and Drug Administration has essentially the same responsibility under both sections. It would be concerned with essentially the same considerations and types of data under both sections. It would take as much, if not more, time and effort on the part of the Food and Drug Administration to consider and approve a chemical under the proposed section 409 as it now does under existing section 408 as regards pesticide chemicals. Hence, there would appear to be no sound reason why the Food and Drug Administration should charge fees for its operations under section 408 while not charging them under proposed section 409.

This bill is intended to correct this inequity. It would eliminate the fee provisions of section 408 with one exception. That is the provision relating to the appointment of an advisory committee to study a petition to establish a tolerance on a pesticide chemical. It appears reasonable to expect that, if a company requests the Government to appoint a group of experts to serve as an advisory committee on its petition for a tolerance, it should be willing to pay the actual costs incurred by the operations of that committee.

While the fees levied against the person requesting a tolerance have been discussed at some length, there are other important fee provisions in the Regulations which warrant careful consideration. For example, if a person wishes to file objections to a tolerance order and request a hearing on it, he must pay a filing fee of $250. This appears at variance with the American system to require that a person must pay a fee to a Federal administrative agency in order to register his objections and request a hearing on one of its orders which he things is contrary to the public welfare, or which might put him out of business as a grower or manufacturer. The regulations also require that if a person files a petition for judicial review of the order he must pay the costs of preparing a transcript of the proceedings and the record on which the order is based.

Legislation is necessary to correct this situation created by the fee provisions of section 408 (o) of the Federal Food, Drug, and Cosmetic Act and the regulations promulgated thereunder. As the Food and Drug Administration stated in its order which appeared in the Federal Register for August 7, 1958, and which announced the latest increase "the collection of such fees is required by law." This has reference to the fact that section 408 (o) provides "the Sec-

retary of Health, Education, and Welfare shall by regulation require the payment of such fees as will in the aggregate, in the judgment of the Secretary, be sufficient over a reasonable term to provide, equip, and maintain an adequate service for the performance of the Secretary's functions under this section." Thus, it would appear that the Food and Drug Administration has no discretion in the matter of the fees to be levied. Since the fee requirement was imposed by law, it must be repealed by law. Hence, the introduction of this bill and the need for congressional approval of it.

Essence of Reutherism

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, most Members regularly read Raymond Moley's penetrating analyses of current political trends. I know of no one whose judgment is keener.

His column in the current issue of Newsweek is entitled "Essence of Reutherism." It is based on Mr. Reuther's own statements made to Washington correspondent for the Sunday Times of London, Mr. Henry Brandon. While Mr. Reuther states that he rejects a separate labor party, he clearly shows that he intends to capture the Democratic Party so completely that it will become a labor party in every sense of the word.

Mr. Moley's comments are of great significance, as we approach a national election. I believe they should be brought to the attention of every reader of the CONGRESSIONAL RECORD; hence I am including them as an extension of my remarks.

ESSENCE OF REUTHERISM

(By Raymond Moley)

A remarkable interview with Walter Reuther was recently tape-recorded for the Sunday Times of London and was reprinted in the New Republic of July 21. Either in speeches, or in demands upon employer companies, or in his actions, the strands of Reuther's philosophy have appeared before. But here they are, tied together in a neat package—ominous, comprehensive, and revolutionary. The proof of his intentions lies in what he has already accomplished.

"The American labor movement," he assures the British, "is as radical as the European labor movement." But he refrains from using their labels, such as socialism, planned economy, Marxism, or fascism, although in essence his program is practically identical with the last. He maintains that reforms would be within the four corners of a free economy and our constitutional system. Indeed, the late Justice Frank Murphy, in 1942, in the Schneiderman case, said that the objectives of any ism, even communism, could be accomplished within the American Constitution. No original thinker himself, Murphy, while Governor of Michigan, probably learned this during his close collaboration with Reuther.

It has been clear that Reuther's efforts to secure first a pension plan and then supplementary unemployment compensation were to bring industrial management to his side in efforts to get the Government to give more. He says that within 48 hours after Ford succumbed to his pension plan "we got action out of Congress that we were unable to get in 12 years."

A PLANNED ECONOMY

The objective in all Reuther strategy is to make private decisions more publicly responsible. To do this, "we want" a "government clearinghouse, a place where you can have a top group periodically sit down and evaluate, and based upon their evaluation and their recommendation, have the private decisions then attempt to translate and implement these broad policies." This is precisely what Socialists call national planning. It is government imposing its will upon all economic life.

On many occasions Reuther has made clear that this supergroup should be composed of one-third management, one-third labor union, and one-third government. This means that to gain control of all planning, the unions must control the third member-government. "The solution," says Reuther, "has got to be economic and political."

He rejects a labor party because "a political party to succeed has to have groups that go way beyond labor as a group." In short, the bulk of workers would be too conservative, since so many have moved into the middle-income brackets. The groups he has in mind that go beyond labor toward collectivism would be leftist farm organizaitons, public-power pressure people, the ADA (in which he is already a principal figure), certain teachers' organizations, and generally the pink intellectuals (who include a good many individuals of wealth).

POLITICAL CONTROL

There is no better example of the sort of coalition he has in mind than the Democrats of Texas—DOT—directed and largely financed by CIO units, which has just reelected RALPH YARBOROUGH to the Senate with almost twice his 1957 vote.

Reuther's ridiculous claim is that the aim is to work with but not capture the Democratic Party. This is a subtle trap for those conservative Democrats who are prisoners of their party, either by habit or tradition or by the one-party system in the South. But he notes that the Democratic Party "is coming to reflect the kind of programs and policies that the American labor movement can support." Thus the Democrats can have the name if their policies are agreeable to Reuther. He will reward the party by bearing a large part of the expense of their campaigns.

Reuther says in conclusion that "the great tragedy is not that the Russians are better than we are—they're doing better because they're trying and we aren't." But the education which he says should be copiously supported should, he says, be directed toward "constructive and creative leisure." If we follow that policy, we may win the next Olympics but lose the cold war. Khrushchev would settle for that.

Post Office Department Honored

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. CORBETT. Mr. Speaker, on Wednesday afternoon August 6, 1958, the Department of the Army and the Military District of Washington honored the Post Office Department with a parade on the Mall staged by the 1st Battle Group, 3d Infantry (The Old Guard). A plaque was presented by Secretary of the Army Wilber M. Brucker to the Postmaster General of the United States and the members of the United States Post Office Department for outstanding contributions to the accomplishment of the vital mission of the United States Army.

This citation reads:

Through the wholehearted and dynamic cooperation of the officials and employees of the United States Post Office Department with the United States Army in assuring the prompt and efficient processing and dispatch of mail destined for our troops at overseas stations throughout the world, the morale and well-being of the American soldier in war and peace, and hence the effectiveness of the United States Army as a major instrument of national defense, has been immeasurably enhanced.

With the deployment of American troops to France in World War I, and the global deployments of World War II, the close and harmonious working relationship existing between the Army and the Post Office Department made possible the maintenance of a strong and durable link between our service men and women and their homes and loved ones which has been and continues to be of immense significance in helping to preserve even under the most difficult and hazardous conditions the essential solidarity of the American family, the foundation of our American heritage.

For such capable and devoted assistance to the United States Army in carrying out its worldwide responsibilities for the security of America, and such distinguished service to the dedicated men and women of the Army, the officials and employees of the United States Post Office Department merit in the highest degree this expression of appreciation.

Postmaster General Arthur E. Summerfield responding for the Post Office Department said:

It is indeed a privilege to accept this tribute paid the Post Office Department by the Army in this magnificent review here today.

As your Postmaster General it gives me a sense of great accomplishment that you have seen fit to honor the 530,000 dedicated men and women of the Post Office Department.

The most satisfying of the many services which the Post Office Department renders is the carrying of messages and packages from home to our American young men and women who are serving in the defense of our liberties in every corner of the free world.

To efficiently cement these ties between home and our Armed Forces abroad, the Department of Defense and the Post Office Department maintain a daily continuous liaison to assure the regular and certain exchange of the mails.

There is, furthermore, an extraordinary significance to this occasion for the freedom which our sons and daughters are defending is especially symbolized and typified by the uncensored exchange of messages through our Postal Service.

The Postal Service which you have honored today is not only essential to human liberty, it is capable of existence only where liberty is a very special thing, something deep in the blood of men, imbedded in the soil, immovable as mountains.

Thank you again, Mr. Secretary, for the high honor the Army pays us today.

The Miller Pesticide Bill

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. MILLER of Nebraska. Mr. Speaker, the Miller amendment to the pesticide bill was signed into law July 22, 1954. Those who use the pesticides must follow closely the instructions as to their use. This law gives to the Food and Drug Administration sufficient authority to assure the public that they are adequately protected at all times against the hazard of the use of these chemicals in food production.

Pesticides play an important role in providing the Nation's food supply and protecting the public health. The law required thorough pretesting of the pesticide chemicals and the protection of the consumer.

Mr. Speaker, it would not be possible to produce as much food as is now produced without the proper use of pesticide chemicals on food crops. If they were not used, I doubt if it would be possible to produce apples, peaches, potatoes, citrus, and tomatoes, and many other crops would be drastically reduced. I doubt if the American people would be fed adequately unless crops and livestock are protected from insects and other pests.

The American public can be congratulated that they have had a food industry that has been most careful in the past in protecting the public health. They have worked in harmony with the Food and Drug Administration.

In publishing a few highlights on the editorial entitled "My Push-Button Garden," it is my opinion that the scientists have just scratched the surface of what may happen in the future.

It is my considered opinion that before long we will have new chemicals and pesticides that will be selective in their uses. They will be selective for different pests. They will be selective in the treatment of the food we consume. Future generations will be benefited by the proper application of science in the production of food for tomorrow.

Mr. Speaker, all of us at one time or another have either farmed or tinkered around our garden, so I am quite certain my colleagues will be quite interested in the article, My Push-Button Garden, which appeared in the July 26 issue of the Saturday Evening Post. It was written by the well-known author, Mr. Frank Taylor.

The article is quite long and tells of the author's experiences in lazy gardening, telling how the unorthodox has worked for him.

Of major interest to the Congress, however, is the information he gives pointing out the wonders and benefits of the new insecticides. He calls them new, but they have been in use since the mid forties. We have heard varying reports on the effectiveness and safety of these chemicals and even now legislation is pending before the Congress which would regulate the use of these modern tools even further. I say "even further" because now they are regulated by the Federal Insecticide, Fungicide, and Rodenticide Act and the State counterpart as well as the Miller amendment to our Federal Food and Drug Act.

Mr. Taylor tells how his garden gradually became "a bug cafeteria. Snails came loping over the hills to feast on our vegetables. Butterflies came fluttering and laid eggs, which hatched out into caterpillars that defoliated the trees. Ants moved by the gillion, bringing aphis and mealy bugs, which are, so I am told, the ants' cows, milked for honeydew. While the ants milked the aphis and the mealies, the latter sucked the juices out of our rosebuds and lilies and iris and sweet peas. Lawn moths laid eggs in the grass, and the weevils that hatched out chewed off the roots, turning great patches of lawn a dead brown no matter how much we sprinkled."

He goes on to tell of his introduction to chemicals designed and developed to aid the farmer and home gardener. "My eyes were opened to their potential one day when two men drove up in a truck equipped with a tank and a power spray rig and what seemed like a mile of hose.

" 'We're looking for a place with a lot of ants,' one of them said.

" 'Brother, you've found it,' I replied.

" 'How'd you like to get rid of every ant on the place?' he asked.

" 'I'd sure like it. What's the plot?'

"They wanted to demonstrate how chlordane would rid a home garden of ants and offered me a special deal. I bought it. They sprayed the place in an hour and drove off. I didn't see an ant around for the rest of the summer. And the aphis and mealy-bug population took a drop too."

Mr. Speaker, the same can be said for many other insects and weeds which annually do billions of dollars in damage. Some of these insects play havoc in the home garden. Others denude forests, strip croplands, destroy pastures and attack meat and milk animals.

The Federal Government, through the United States Department of Agriculture, has declared war on many of these pests which can be eradicated. Perhaps one of the greatest contributions these chemicals have made is the complete eradication of malaria from within the confines of the United States.

Literally millions of lives have been saved by successfully eradicating the anopheles mosquito—carrier of malaria—from the United States.

At present the Department of Agriculture is carrying on eradication programs to rid our land of the gypsy moth which is destroying forests in Pennsylvania, New York, New Jersey, and the New England States and the fire ant and the Mediterranean fruitfly in the South.

These programs have been under attack by certain groups. Charges have been made—many of them half-truths and warped by personal prejudices—and USDA has been taken into court on injunction proceedings to stop the spraying for gypsy moth. Based on shotgun charges one cannot help but question their motives.

The case was heard, and when all the facts were presented, the injunction was denied. In rendering his opinion, Judge Walter Bruchhausen, of the United States District Court for the Eastern District of New York pointed out that the adverse testimony presented was not warranted by the facts. He also stated, "Coupled with these elements is the fact that some are so strongly in favor of organic farming, without the use of chemicals, or emphasize their preference for biological control that their judgment may be influenced by their leanings."

Mr. Speaker, I believe it is most important that certain facts be presented at this time. First, Public Law 518 of the 83d Congress provides for the establishment of safe tolerances for pesticide residues in or on raw agricultural commodities. The Food and Drug Administration, together with the Department of Agriculture, are charged with the responsibility of setting these safe tolerances and, I might add, they are doing an excellent job.

These tolerances are established on years of research necessitating expenditures of hundreds of thousands of dollars. Toxicity studies based on generations of test animals must be completed to satisfy the demanding requirements of Food and Drug. The public health is always given major consideration.

I have checked with Dr. W. L. Popham, assistant administrator of Agriculture Research Service, as to the safeguards employed by the Department of Agriculture in their spray programs. I am satisfied they are doing the best possible job.

Their fire ant eradication program in the South is the latest target for the food fadists. Cries of "They are killing all the wildlife" have reached the Congress. These reports have not been confirmed. In fact, in one area in Alabama which was treated it was reported that all the quail had been killed by the insecticide used. A check with the landowners showed that quail still abound in the treated area.

Mr. Speaker, I sincerely urge that we should act slowly before we do anything drastic to curtail these eradication programs. We should carefully weigh all the facts, giving prime consideration to the health and economic benefits derived. I am convinced that when this is done, the Congress will seek to expedite these programs.

Civil Aviation and the Weather Bureau

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. UTT. Mr. Speaker, recently the House passed the supplemental appropriation bill without giving favorable attention to the section relating to steps needed to put the Weather Bureau in a

position to provide adequate service to aviation. This serious and tragic omission will someday have dramatic consequences.

The Weather Bureau is required to supply what weather service is needed for the public safety and national interest. The Bureau concerns itself with weather observing, forecasting, warning, recording, hydrology, and flood warning, climatology, research, and atmospheric physics. And in addition to their observational duties, collateral requirements are numerous and varied, including the furnishing of weather information to motorists, housewives, farmers, TV stations, boat operators, organized sports, and political aspirants.

The overall number of forecasters available for writing forecasts, for advising CAA on weather conditions affecting air traffic control procedures, and for the issuance of warnings is down more than 20 percent from the staff of 10 years ago. Greatly increased aviation activity during this period, coupled with the sharp reduction in staff has resulted in far less time being available for the preparation of forecasts. Under such circumstances there naturally has been a decline in the quality of forecasts and in service to aviation generally.

Without fanfare but with quiet determination, the National Business Aircraft Association has focused attention to this critical congressional omission.

Generally speaking, I am opposed to unchecked spending and bigness in Government, for together they draw our Nation into the quicksand of smothering destruction. Certain departments, however, require sufficient funds to adequately serve the Nation as they are charged. Our Weather Bureau, like our military, should be strong, alert, mobile, and technically modern. I urge the other body to recover and restore the necessary five points points outlined in the National Business Aircraft Association letter.

Indeed the restoration cost is modest compared to the staggering sums which our Congress pours into Poland and Yugoslavia to subsidize communism and strengthen the grasp and control over their captive peoples. The National Business Aircraft Association communication follows:

CIVIL AVIATION AND THE WEATHER BUREAU

Congressmen agitated by midair collisions are berating both CAA and CAB over air safety matters. Yet, these same Members in the past 10 years have done little to help air safety as it relates to weather. The unpleasant picture unfolds when we examine the happenings of the past 10 years.

The Weather Bureau offers less aviation service today than it did 10 years ago. During this period there has been a loss of 85 weather stations, with a corresponding loss of 279 highly skilled weather service employees. During this same period aircraft operations have more than tripled. CAA fix postings (instrument flights) have quadrupled. Instrument approaches have increased a whopping sixfold.

Today a fleet of more than 88,000 civil aircraft are solely dependent upon the forecasting and disseminating abilities and services of the United States Weather Bureau. These aircraft (not including the 1,800 scheduled air carriers) are widely used in business, industry, training, and general transportation. The type vary from large pressurized four-engine airplanes to helicopters, jets, and even turboprops. Most of the larger airplanes are readily convertible to military carriers in times of national emergency.

This vast aviation fleet is faced with a grim problem that Congress refuses to recognize: (1) The deplorable state of aviation weather services rendered by the Weather Bureau to this immense force; and (2) the air traffic control and safety problems which are compounded by lack of weather information.

The results of this decline in Weather Bureau service to the safety of civil aviation is characterized by the announcement that in 2 years civil aviation suffered 1,931 accidents in which the CAA cites weather as a casual factor. In the same period, the air carriers suffered 37 accidents attributable to weather. Thus the obvious need for greater weather facilities available to civil aviation.

The air carriers, like the military, have their own weather forecasters. All carriers have flight dispatchers to advise their pilots while en route of changing weather conditions, and they have their own radio network by which this weather information can be quickly transmitted to them. This forgotten and ignored 88,000 aircraft have none of these facilities which are considered basic for the safe conduct of instrument flights.

Realizing this deplorable situation, the Commerce Department and the Weather Bureau have repeatedly sought to remedy this deteriorating condition by outlining detailed plans for correcting the deficiency. Of the 8 requirements to bring the Bureau's forecasting and weather disseminating service up to the essentials required by civil aviation, only 1 item—high altitude forecasts for international flights—was acted upon by the House subcommittee. The items not recommended by the subcommittee are of direct and vital concern to the 88,000 general aviation fleet. The NBAA carefully considered all proposed items considered essential and urgent, and accordingly place particular emphasis on the adoption of five items:

1. Restoration of aviation forecast briefing services: During the past year services to aviation have been curtailed at 72 airport weather stations due to dropping of positions. These reductions were necessary for the Bureau to function within the narrowing orbit of budget operations.

2. Restoration to provide 24-hour-a-day weather observations at high-activity airports: In keeping within the reduced budget of last year 57 airport Weather Bureau stations now operate on a part-time basis (less than 24 hours each day). Lack of weather reports during the hours the station is closed and the unavailability of aviation weather briefing services poses a severe handicap to pilots and other interested users.

3. Continuous weather warning broadcasts for pilots. This program will provide continuous radio broadcasts to pilots of existing weather conditions plus information as to hazardous weather conditions which are expected to develop during the ensuing 6 to 12 hours. The 88 CAA L/MF ranges will be utilized to transmit the weather information. In this way pilots will be able to obtain required aviation weather briefing service without recourse to crowded telephone channels.

4. Establishment of 10 new weather reporting stations at airports which meet certain criteria for establishment of new aviation weather reporting stations.

5. Automatic aviation telephone forecasts: An automatic answering aviation telephone device has been in operation at Washington National Airport for several years and has proved to be of immense help in getting aviation weather forecast information to pilots. An aviation weather forecast, up to 1 minute in length, is recorded by the forecaster on equipment located in the weather office. This forecast describes current local conditions, changes expected for the next 6 to 12 hours and weather on air routes to cities 200 and 300 miles distant. Two unlisted telephone lines hook into the recording equipment so that two pilots may obtain weather briefing simultaneously. This service is planned at the 50 airports in the United States with the most aviation activity.

The Weather Bureau has managed to continue its operation with essentially the same basic appropriation only at the cost of closing stations and reducing service. In order to meet the continuous and pressing demands of progress and science, the Bureau needs to modernize, and this is possible only through the restoration, not expansion, of units heretofore removed, or curtailed, through wrongly placed budget reductions.

We need to bring the Weather Bureau services into phase with present aviation requirements.

As a great nation we are spending enormous sums of money to develop a system of airways, a system of airway traffic control, and a complete radar network to control traffic, all in the name of flying safety. Yet we have ignored one of the basic causes of air accidents—those caused by weather.

We completely surround our soldier with the the finest of weapons and features to protect his life. Our military pilots are wrapped in the latest of safety innovations to protect him. Money is no object. And our air carriers, foreign and domestic, are likewise placed under the protective canopy of modern facilities. But the 88,000 civil aircraft, the very bedrock of our country's aviation interest, is being denied the essentials, or luxuries, of aviation safety.

Dr. L. R. Mellin

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. LIBONATI. Mr. Speaker, a real veteran leader died on Wednesday, August 6. Dr. Robert Mellin was well known throughout the American Legion for his service work among veterans. He was in the thick of the fighting to improve the services of the veteran facilities.

As a leader in the medical profession, his advice and suggestions carried great weight in the legislature of the State of Illinois, the Congress, as well as in the national councils of the American Legion. His passing marks another great loss to the servicemen of World War I. The days grow shorter and the ranks grow thinner.

To his talented widow—a renowned educator—Winifred, 4 brothers, and 3 sisters we extend our heartfelt and sincere condolences. Dr. Mellin was a proud and kindly man with many friends. They mourn his death.

The Chicago Daily Tribune and Sun-Times articles are as follows:

[From the Chicago Daily Tribune of August 7, 1958]

DR. L. R. MELLIN IS DEAD AT 65—RITES FRIDAY

Dr. L. Robert Mellin, 65, of 840 Castlewood Terrace, an eye, ear, nose, and throat specialist with offices at 185 North Wabash Avenue, died Wednesday in Billings Hospital. He was graduated in 1914 from Loyola University medical school. Dr. Mellin was past commander of Advertising Men's Post, American Legion, and the Military Order of World Wars. He leaves his widow, Winifred Holmes Mellin, former member of the Chicago Board of Education; 4 brothers and 3 sisters. Mass will be said at 10 a. m., Friday, in St. Thomas of Canterbury Catholic Church, 4827 Kenmore Avenue.

[From the Sun Times of August 7, 1958]

DR. L. R. MELLIN DIES; PHYSICIAN, LEADER OF VETS

Dr. L. Robert Mellin, 65, physician and veterans' leader, died Wednesday in Billings Hospital.

Dr. Mellin, of 840 West Castlewood, began his practice upon graduation from Loyola University School of Medicine in 1914. In World War I he served as a lieutenant in the Navy. He maintained offices at 185 North Wabash and for many years was on the staff of Alexian Brothers Hospital and Columbus Memorial Hospital.

Dr. Mellin was a past commander of Advertising Men's Post, No. 38 of the American Legion and a past commander of the Chicago chapter of the Military Order of the World Wars. He was also a former medical officer of the Cook County Council of the American Legion and a former member of the National Veterans' Rehabilitation Committee.

Requiem mass will be offered at 10 a. m. Friday in St. Thomas of Canterbury Church, Kenmore and Lawrence. Burial will be in Delavin, Wis., the birthplace of the widow, Winifred.

Survivors also include the parents, Joseph and Hannah Mellin, and a nephew, Robert Holmes Lindstrom.

Television, an Effective Instrument of Education

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. SANTANGELO. Mr. Speaker, television has grown tremendously during the past number of years. It is a source of entertainment and a medium of knowledge. The educators have not utilized this medium to its full extent and the airways should be employed in the great task of education. One facet of the problem is the teaching of the English language to nationality groups who do not speak English. In our town, especially in my congressional district, there are many groups speaking two languages and a large percentage of the population speaks only the foreign language. The influx of Puerto Ricans to America has accentuated the problem. A summary of the facts on New York City Spanish-speaking people will prove illuminating and interesting.

There are an estimated 900,000 Spanish-speaking people in New York—about half the population of Madrid, Spain. Some 700,000 of these are Puerto Rican. Cubans, estimated at 100,000, comprise the second largest group. Of the 725,235 pupils enrolled in elementary and junior high schools in New York last September, 101,671 were Puerto Ricans. Of the 45,000 attending adult education classes in the evening last March, 11,000 were Puerto Ricans.

A total of 80,563 pupils in New York schools (including high schools) as of last October, were classified as non-English speaking. These ranged from pupils unable to spak any English to those who could speak English well enough for most situations, but still had to make a conscious effort to avoid the forms of some foreign language. School officials said Spanish-speaking pupils were preponderant in the total.

Spanish is spoken in almost all Puerto Rican homes, but over 50 percent of these are reported to be bilingual. There is an average of 5.1 persons per Puerto Rican family. The Puerto Rican population is a young population; about one-third of the Puerto Ricans are under 10 years, over half are under 24 years, and two-thirds are under 35 years. The Puerto Rican labor force is estimated at 260,000. About 50,000 are employed in the garment industry, 25,000 in the restaurant and hotel business, and about 15,000 in the laundry business. About 73 percent of Spanish-speaking families read a Spanish newspaper exclusively and 14 percent read English and Spanish newspapers. Approximately 79 percent of Spanish-speaking families own television sets, and virtually 100 percent own radios.

One of the television channels has initiated a program to help New York's Spanish-speaking population to learn English through a new daily morning series called Aqui Se Habla Ingles.

I commend the television station WRCA-TV, which has initiated its program on channel 4.

New York's vast Spanish-speaking population—including an estimated 700,000 Puerto Ricans alone—will be aided by television in the task of breaking the language barrier. Next week station WRCA-TV, flagship station of the National Broadcasting Co., will launch a new daily program which, by teaching English and encouraging its regular use among Spanish-speaking New Yorkers, is designed to speed the assimilation of these citizens into the community.

Titled "Aquí Se Habla Inglés"—English spoken here—and presented in cooperation with Harvard University's language research center and the Department of Labor, Commonwealth of Puerto Rico, the new program will be seen on channel 4 Monday through Friday from 6:30 to 7 a. m., beginning Monday, August 11.

In announcing the series, William N. Davidson, general manager of WRCA-TV said: "The early time period enables us to put this program on the air without disrupting our present schedule, which, of course, is geared to the majority of viewers. Happily, however, our research indicates that this period will accommodate a great segment of the specialized audience we are trying to help. The majority of Spanish-speaking residents perform labor that requires them to rise very early or retire very late, and in both cases they will be able to fit the new program conveniently into their daily routine.

Aquí Se Habla Inglés will be hosted by Jose Roman, a native of Puerto Rico who came to New York 5 years ago and is now labor editor of the Spanish-language newspaper El Diario de Nueva York. Mr. Roman, who is well-known to Spanish-speaking New Yorkers for his Spanish language program, What's Your Problem, on radio station WHOM, will open the program each morning with a brief bilingual roundup of news of particular interest to Spanish-speaking persons. Then he will introduce the program's English instructor, Clara Barbeito.

Miss Barbeito, a teacher, author, and editor with the McGraw-Hill Book Co. foreign department, will begin instruction with the day's vocabulary—a list of English words, many of which relate to a specific topic to be discussed by Jose Roman later in the program. After vocabulary, viewers will watch an English-language training film produced by the Harvard University Language Research Center. Combining animated cartoons and real-life sequences, the films are designed to teach phrases and short sentences while also increasing basic vocabulary.

As added incentive for viewers to build a greater working English vocabulary, and to provide a greater sense of participation, the program will feature a daily word game. To play the game, viewers must identify in English a number of household objects shown each morning on the program. When listed correctly, and in the sequence shown, the first letters of each object will spell out a Spanish word. The viewer submits his list of words, plus the English translation of the key Spanish word, and if correct, will receive a prize.

At the conclusion of the word game, program host Jose Roman will speak in English only, on a topic of special interest to Spanish-speaking New Yorkers. These daily topics will cover such subjects as the New York City rent clinics, where they are, what they do, and how they operate; job opportunities in New York, how to apply and requirements necessary; educational opportunities for adults, where and how to register for them, as well as mainland American customs and culture.

Aquí Se Habla Inglés will be produced by Miss Pat Farrar of the WRCA-TV Public Affairs Department, and will be directed by Mike Garguilo.

The Sherman Adams Case

EXTENSION OF REMARKS

OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1958

Mr. WATTS. Mr. Speaker, under leave to extend, I wish to incorporate in the RECORD two editorials which appeared in the Lexington Herald, Lexing-

ton, Ky., relating to the Sherman Adams case:

[From the Lexington Herald of Thursday, June 26, 1958]

AS ACTOR, ADAMS WAS NO NIXON

Vice President NIXON has advised his fellow Republicans not to panic because of the Sherman Adams case. And in advising his party's leaders to wait out the storm, occasioned by disclosures of Adams' acceptance of gifts, NIXON was speaking as a politician who has weathered such a storm, and with flying colors.

In 1952, NIXON admitted the acceptance of gifts of money amounting to more than $18,000 while he served as a Member of the United States Senate. The money was given to him after he was elected to the Senate and before he was nominated as a candidate for Vice President in 1952. NIXON apologists, including the Lexington Leader, sometimes explain away the NIXON acceptance of money by saying that it was for campaign purposes. They forget, of course, that NIXON wasn't running for any kind of office during the time that he received the money.

Supposedly, the money paid to NIXON by a group of Californians engaged in the real estate, oil, banking, and allied interests was to help pay his office expenses. An audit showed that a good part of the money went to pay travel, hotel, and communication expenses incurred by NIXON as a United States Senator. More than $5,000 was spent by NIXON for other expenses, which he ordinarily would have had to pay for himself. Thus the money served to supplement NIXON'S salary as a Senator, and it was paid by a group of persons who could have had some vested interest in Federal legislation at the time.

When a New York newspaper uncovered the NIXON fund in 1952, the then vice presidential candidate put on a melodramatic television performance in which he referred to Democratic mink coats and almost everything except the $18,000 gift. He certainly did hint that the gift made it a little easier perhaps for him to make the downpayment on a $45,000 house which he bought after being elected Senator.

GOP leaders no doubt wish that Sherman Adams could have been as adroit as NIXON in explaining away the Goldfine gifts. Adams was a cold performer in his appearance before the Harris subcommittee, and his confession act didn't click as the producers had hoped. His histrionic ineptitude no doubt means that President Eisenhower eventually will have to get a new "chief of staff" and that the country will, to some extent, get a new President.

[The Lexington Herald of Monday, June 30, 1958]

PART OF YOUR CONGRESSMAN'S JOB

Congressmen, since the meeting of the first session after formation of the Union, have been called upon for favors by the folk "back home." It is just part of their job and has been so accepted through the years. Therefore, it is somewhat surprising to read where some of the defenders of Sherman Adams try to cast doubt as to the wisdom or propriety of such congressional acts, and seek to place these congressional contacts with Federal agencies on an equal footing with those made by the Presidential assistant in behalf of his friend, Bernard Goldfine.

These columnists, among whom David Lawrence is the most outspoken, endeavor to make it appear that Congressmen who take up matters with Federal agencies in behalf of constituents are violating some code or regulation. Again we say, this is part of the Congressmen's job and they soon will find that the folk back home are not interested in returning them to Washington if they don't heed their inquiries. The point the writers seem to miss—if they are not purposely trying to evade the issue in order to protect Mr. Adams—is that these requests from the home district are not accompanied by lavish gifts.

Congressmen exert influence and there is no denying the fact that when they call upon a Federal agency for a report that the agency responds promptly—perhaps a little more readily than it would if the request came direct from the voter back home. Requests from Senators probably merit a little speedier action than those from Representatives. Requests from high officials, especially those in the executive branch, undoubtedly get speedier action than those from Senators. The "weight" implied in such requests varies according to the rank of the official making the request.

A Congressman handles hundreds, many of them thousands, of such calls in the course of a year. If he decides he isn't interested in returning to Washington all he has to do is to begin ignoring these calls. Few expect or receive anything other than pledges of support for such services. Few, if any receive vicuna overcoats (even $200 ones, the price to which David Lawrence now ascribes the $700 Adams gift) $2,500 hotel bills or $2,500 oriental rugs, on loan. If you want to ask your Congressman for some favor don't be frightened by all this talk. Just don't send him anything for this service. You may embarrass him.

Report on the 2d Session of the 85th Congress

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report to the people of Tennessee on the activities of Congress during the 2d session of the 85th Congress. It has been a most active session during which we have considered extremely important legislation. In my estimation, the Congress has fulfilled its responsibility to act in the public interest in almost every instance. Many of the bills considered here have been of direct concern to the people of my State and I want them to know of our efforts.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: Now that Congress is approaching adjournment, I want to write you about some of my impressions of this second session. And I also want to take this opportunity to thank you for the comments, observations and recommendations many of you submitted which have been so helpful to me in these past months.

TO MEET NEEDS OF NEW SPACE AGE

The 85th Congress was the first to be faced with the challenges of the space age, heralded by the launching of the satellites now circling above the earth. To meet the demands of this new era we are entering the Congress has responded by passing considerable major legislation which I feel was vitally necessary to guarantee our security and enable us to prepare adequately for our ever-enlarging responsibilities.

For example, I strongly supported the passage of the defense reorganization plan, so clearly called for by the new needs of the space age in military and strategic planning. This act clarifies the chain of command, especially as it relates to the authority of the Secretary of Defense over the military departments, and it increases the size of the staff of the Joint Chiefs of Staff in order to facilitate strategic planning. A new position of Director of Defense Research and Engineering was created by the act, which also contains many other provisions designed to define powers and functions within the Department of Defense. As a Member of the Senate Armed Services Committee, I took an active role in the passage of this act, which should eliminate much of the wasteful competition between the services and make the entire defense organization and readiness of the Nation more adequate.

Another move to meet the challenge of this era was made by Congress in creating a new agency to deal specifically with the development of a comprehensive program of research and operations in aeronautical and space sciences. The newly created National Aeronautics and Space Administration is to be a civilian controlled body dealing with the problems of space flight and the development of aircraft, missiles, and other space vehicles. This is indeed a dramatic step into the future.

DEFENSE PROGRAM

Congress further responded to the critical military problems by appropriating a record amount during peacetime for our defense. It became apparent to most of us that we were woefully weak in many areas of defense. As a member of the Special Defense Preparedness Subcommittee which investigated our military posture early in this session I became aware of a serious need for stepped-up defense activity. The budget for military affairs was designed to accomplish that task.

We also followed the recommendations of the Cordiner Commission by raising the pay rates a minimum of 6 percent for almost all military personnel with over 2 years of service—a measure which should serve to attract and retain the capable men needed to staff our Armed Forces.

Meanwhile, I have been encouraging passage of the national defense education bill, which provides for a Federal scholarship and loan program to aid talented students to continue their education. This bill would also grant money to State agencies to facilitate the improvement of science, mathematics, and language teaching. I feel that this is a very much-needed program, but I want to assure you that it involves no Federal infringement on local control of education. A modified form of this bill has passed the House and I am hopeful that the Senate will act favorably on it before this session adjourns.

FOREIGN AFFAIRS AND MUTUAL SECURITY

In the field of foreign affairs, we passed two extremely important bills to which I gave my full support. The troubles in Latin America and the crisis in the Middle East underlined the vital need for full authorization of the mutual security program. The military and economic support provided under this act is one part of our attempt to meet the challenge of Russia's determination to wage wars of economic aggression combined with political subversion. This challenge also pointed out the need for an effective program for reducing barriers to trade. It is to the credit of Congress, I think, that a reciprocal trade program was renewed in the national interest. Expanding international trade promotes the best interests of our own country and advances the welfare and security of the free nations of the world. To achieve this end I gave my support and

vote to the bill which successfully extended the Trade Agreements Act.

Another steppingstone to international peace and security was the passage by the Senate of a resolution supporting the creation of an expanded and more effective United Nations police force. In supporting this resolution it was my feeling that we must do everything possible to strengthen this vital agency which has done so much to promote the peaceful solution of our international problems.

COMBATING THE RECESSION

On the domestic scene, too, the second session of the 85th Congress faced important issues. Foremost among these was the recession. I proposed or supported several measures designed to stimulate business, restore consumer confidence and inject new stimuli into the economy. One bill which I cosponsored is known as the Community Facilities Act. This act would expand the eligibility of projects for public facility loans under the Housing Act. It is designed to accelerate local public works programs, not by the old PWA approach, but through expanding the capacity of local agencies of government to undertake projects through Federal loans. Such a program would be much faster than a Federal public works program and would not run up the huge Federal debt. This bill passed the Senate but unfortunately did not receive the approval of the House of Representatives. It is my sincere hope that this bill will receive the earliest possible reconsideration and passage in the next session of Congress.

Another important antirecession measure was the law which authorizes loans to States that wish to extend their unemployment benefit programs to persons who have exhausted their jobless pay. I sponsored a bill which would have enlarged the benefits considerably and extended them over a longer period of time, but unfortunately it was not accepted. I of course supported and voted for the bill that did pass.

Other proposals met with more complete success. These included the passage of a major housing bill—which the President reluctantly signed—to put new life into the construction industry. We felt that the stimulation of housing was especially important because it does not take that industry long to tool up and get started, and furthermore, it touches almost every community in the country and stimulates many related businesses as well. An emergency housing bill was the first antirecession measure passed in 1958 and was followed by passage in the Senate of an omnibus housing bill. This latter measure, I fear, may never get through the House of Representatives owing to the lateness of the session.

NATIONAL HIGHWAY PROGRAM

During this session we also passed a bill stepping up the great Federal-aid highway program. By accelerating the road construction of this 41,000-mile system it is hoped that resultant demands for both men and materials will boost the economy. Under the same principle we have urged the various Government departments, especially the Department of Defense to which most of the money goes, to step up purchases and contracts for which money had previously been appropriated.

ANTITRUST AND MONOPOLY SUBCOMMITTEE

Much of my work this session has involved the Antitrust and Monopoly Subcommittee, of which I am chairman. Along with the problem of the recession, our chief domestic problem has continued to be inflation. I have continued to conduct hearings designed to determine monopoly influence on the inflationary spiral, especially with respect to administered prices. For a long time, by speeches on the floor of the Senate and by writing the President, I have urged a voluntary labor-management wage-price control program to avert the increase in steel prices, which will probably cause another round of inflation, depress the economy, further lower production, and add to unemployment. Since the recent steel-price increase, the committee has recommended again that the President exert strong leadership to maintain the price line. As yet he has done very little. This problem is extremely serious for both the public and the Government, and you may be assured that I will continue to work toward its solution, for what I consider to be the best interests of the Nation.

I have also sponsored a bill to restrict unlawful price discriminations. The heart of this bill states that in effect a company cannot sell to retailers in the same market area at two different prices if the end result is a lessening of competition. The passage of this bill is considered a matter of economic life or death by thousands of small-business men.

As the best anti-inflationary measure at this point, I advocated a straight across-the-board price cut at all levels—manufacturing, wholesaling, and retailing. If business were sufficiently stimulated by such a reduction, increased production would more than make up for the reduction in prices, and there would be no marked reduction in business profits.

LABOR LEGISLATION

Other major legislation of interest includes our activities in the labor field. We have responded to the disclosures of corruption and abused trust and power in some unions by enacting measures which are in the interest of both labor and the public. No one is completely satisfied with these bills since opinions differ widely on the remedies required, but these bills have gone a long way in meeting the recommendations of the McClellan committee which has been digging into these abuses. Both Houses have approved a bill which requires managers of employee welfare funds to register these funds with the Department of Labor. In addition, they would be required to make annual financial reports and disclose the funds' financial transactions to the public. The Senate has also passed a bill providing for the regulation of union elections and requiring union officers to file financial, organizational and trusteeship information with the Secretary of Labor. This bill contains provisions for greater protection of the rights of individual workers, the public, management and unions in their labor-management relations. We are hopeful that this may receive House action this session.

RAILROADS

As you know, our railroads have been suffering severe economic reverses in recent years. Many are on the verge of bankruptcy. The Congress recognized the importance of a strong communication and transportation system by passing a Transportation Act which provides some tax relief and financial and operational assistance to the railroads. I strongly supported these measures and feel that the railroads will be restored to sound financial condition.

THE 49TH STATE ADMITTED

I am sure that all of you are happy with me to welcome into our Union the 49th State of Alaska. For many years I have sponsored and actively supported the admission of Alaska, which is truly deserving of statehood. You may be interested to note that Alaska followed what is known as the Tennessee plan in electing two Senators who then petitioned Congress for admission. Tennessee had done the same thing just prior to its admission in 1796.

Also approved this session was another overdue measure which provided an average 10.1 percent increase in pay for all classified Government workers: white-collar workers in TVA, AEC, DIA, and other nonclassified agencies, including postal employees.

OF SPECIAL INTEREST TO TENNESSEANS

One of the most important pieces of legislation, especially for Tennesseans, was the farm bill. Three attempts have been made in 1958 to write either basic or emergency farm legislation. The latest bill, which passed the Senate last month, provided farmers the choice of reductions in price supports and eased production controls on cotton, or the present price-support program. It also contained provisions relating to corn, feed grains, and rice. I was certainly not fully satisfied with this bill, but I supported it chiefly because of the emergency situation in cotton, and in consideration of the President's vetoes of previous farm bills. It is still not clear whether the House will act on farm legislation this session, but I am hopeful that it will.

On the brighter side, I am glad to report that 25 counties in west and middle Tennessee were declared eligible to receive Farmers Home Administration emergency loans under a law passed this year. This law authorizes credit measures to meet emergency needs of farmers and small business due to excessive rainfall.

In the last session of Congress the Senate passed a good and workable self-financing law for the TVA—a piece of must legislation. We are still anticipating House approval of this bill which would relieve TVA of the annual fight for appropriations, and will permit the planning of its power expansion on a much sounder basis. Incidentally specific appropriations of interest to Tennesseans included almost a million dollars for Cheatham lock and dam, over $10 million for Barkley Dam, and planning money for an important project at Melton Dam, just to mention some highlights. The Memphis Harbor project, for which $550,000 was allocated, has now received funds for its completion.

Last the President vetoed the important appropriations bill which included the Memphis Federal Building and other matters of interest to our State. These were not among the provisions to which he objected, however, and I am confident that these appropriations will be approved this session.

Other construction authorized included 13 new armories and other military installations in various localities throughout the State. There was also authorized a new metals and ceramics building at Oak Ridge which will greatly facilitate our research in atomic energy. I am very hopeful that funds will be forthcoming for the construction of that building as well as for a permanent research building at Oak Ridge which was authorized in 1957.

For some time I have tried to prevent the closing of Mallory Air Force Base at Memphis. The Air Force, however, has decided to close that installation. I am endeavoring, and I am confident that I will be successful, to obtain funds for the modification of the Memphis General Depot in order that the Air Force motor vehicle function can be relocated there. The Air Force is supporting my efforts and they agree that it would be detrimental to the Air Force operations to have this very efficient management team broken up by relocation.

The omnibus judgeship bill, which authorizes three new Federal judges for Tennessee, has not yet been reported from the Judiciary Committee. A bill authorizing 1 new judgeship each for the 3 grand divisions of Tennessee passed the Senate last year but failed in the House. Owing to the lateness of the session, it is doubtful that it will be enacted this year although I have stressed the need for additional judges over and over again.

This has been a most sketchy outline, indeed, but perhaps from these highlights it may be seen that this 2d session of the 85th Congress has been exceptionally busy one, despite its several disappointments. This

has been my 20th year as a Member of Congress and never in my experience have the challenges been greater than now, as we dramatically enter this new era, beset by the serious domestic and crucial foreign problems which call for responsibility, vision, and imagination.

If you desire more detailed information write to me in Washington.

I want to again express my appreciation for all the letters and suggestions I have received during the course of this session. Be assured that I will welcome your continuing interest and recommendations for the new legislative session beginning next January.

Sincerely,

ESTES KEFAUVER,
United States Senator.

The United States Helped Arab Nationalism

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. FARBSTEIN. Mr. Speaker, the Near East Report, a Washington letter on American policy in the Near East, in its August 1, 1958, issue contained an article headed: "The United States Helped Arab Nationalism." This article appears to me to portray the United States as the one country which has aided Arab nationalism instead of the United States being portrayed as the villain or enemy of Arab nationalism. It seems singularly appropriate at this time, when there is so much ferment in the Near East, that the historical background of the area be presented to the Members of the House; and I therefore request that it be printed in the RECORD:

ANALYSIS: THE UNITED STATES HELPED ARAB NATIONALISM

It is difficult for the United States to come to terms with Egypt's Gamal Abdel Nasser because he does not really want to come to terms with the West. He profits by his anti-westernism. He gains popular acclaim by portraying America as the villain, the enemy of nationalism, the ally of the conservative past, and the exploiter of the fellahin.

To this indictment, America owes neither assent nor apology.

The truth is that Arab nationalism is indebted to the United States. For if our country had not entered World War I in 1917, thus insuring the victory of the Allies, and if President Wilson had not insisted on self-determination for all peoples, the Ottoman Empire would have survived and the eight independent Arab states would not have come into existence.

Few Arab nationalists today will acknowledge the decisive United States role in restoring Arab independence, and if they are reminded of it they will insist that the United States then forfeited Arab friendship by supporting the creation of the State of Israel. Since the great majority of the nations of the world, including the U. S. S. R. as well as the United States, joined at the U. N. in recommending the establishment of Israel, it is always a mystery why the United States should be singled out by Arabs for special responsibility.

Conversely, since the United Kingdom alone among the great powers refused to support and implement the U. N. decision, it is a mystery why this pro-Arab attitude did not endear the British to the Arab world.

But the fraudulent character of this propaganda is best exposed by the forgotten fact that the pioneer Arab nationalists who led the desert revolt were so eager for independence and so grateful to the West for assistance in driving out the Turks that they did not begrudge Palestine to the Jews.

THEY ACCEPTED ZIONISM

The romantic leader of the Arab awakening, Lawrence of Arabia, accepted Zionism and believed it would benefit the Arabs.

The diplomatic literature of the period documents Arab acquiescence.

On January 3, 1919, with Lawrence as intermediary, the Emir Feisal, grandfather of the youthful king who was murdered in the Baghdad coup last July 14, signed an agreement with Dr. Chaim Weizmann by the terms of which the Arab Kingdom of the Hejaz accepted the Balfour Declaration. Two months later, Feisal wrote to Associate Justice Felix Frankfurter, who was then representing the Zionist organization:

"We Arabs, especially the educated among us, look with sympathy on the Zionist movement. * * * We will wish the Jews a most hearty welcome home."

Thus, the British Royal Commission, in the historic 1937 report declared:

"If King Hussein and the Emir Feisal secured their big Arab State, they would concede little Palestine to the Jews."

Indeed, there was every reason for the Arabs to accept the Balfour Declaration which promised Palestine fully to the Jews because that declaration helped win World War I and helped the Arabs themselves to liberation. It may sound odd to today's Arab nationalists, but Arab nationalism literally owed a debt to Zionism.

Thus, the British Royal Commission wrote in 1937:

"The fact that the Balfour Declaration was issued in 1917 in order to enlist Jewish support for the Allies and the fact that this support was forthcoming are not sufficiently appreciated in Palestine. The Arabs do not appear to realize in the first place that the present position of the Arab world as a whole is mainly due to the great sacrifices made by the Allied and Associated Powers in the war, and, secondly, that insofar as the Balfour Declaration helped to bring about the Allies' victory, it helped to bring about the emancipation of all the Arab countries from Turkish rule. If the Turks and their German allies had won the war, it is improbable that all the Arab countries except Palestine, would now have become or be about to become independent states."

ARAB RESISTANCE

Arab hopes for complete and swift independence were frustrated by both the British and the French. Feisal himself was ejected from the Syrian throne. Inside Palestine, Arab extremists resisted the implementation of the Balfour Declaration and the League of Nations mandate with riots and strikes. With this, there began a long and tragic period of vacillation and appeasement, during which Jewish rights to Palestine were whittled down by the mandatory power.

The first partition in 1922 severed Transjordan from Palestine to provide a throne for Abdullah, as a consolation to wounded Arab pride. (One wonders whether Churchill would do it today.) Finally, by 1939, the promise to the Jews was virtually nullified by the Palestine white paper, which all but closed Palestine's doors to Jewish immigration and doomed uncounted numbers of Jews to death in Hitler's gas chambers and concentration camps.

(History has a curious way of repeating itself. In a first reaction to the anti-western coup in Baghdad, Senator RALPH FLANDERS, Republican, of Vermont, offered a 1958 white paper. He took the Senate floor to urge cutting down Jewish immigration into Israel by striking at American Jewish philanthropic support for refugee resettlement. How does Senator FLANDERS reconcile his argument that American Jewish aid to Israel has caused Arab resentment with the impressive fact that West Germany has never suffered any setback in its growing relations with the Arab States, even though it is pouring almost a billion dollars into Israel for reparations?)

Despite its early disappointments, Arab nationalism overcame obstacles as the French and British withdrew and Arabs won independence in nine separate Arab States. But one must draw a distinction between the historic nationalism of the Hashemites and the form it takes under Nasser's banner.

Nasser wants to unite—and dominate—the entire Arab world. It is a bizarre twist of history that the great-grandson of Hussein, the leader of the Hejaz revolt, has fallen to assassins who struck him down in the name of Nasser's nationalism.

A true nationalism respects the rights of all people to self-determination, Jews as well as Arabs, Iraqis as well as Egyptians, Lebanese as well as Saudi Arabians. This is consistent with the Wilsonian concept, but the imperialist would erase boundaries he impeaches as artificial and obliterate sovereignties he derides as synthetic.

Those who want to deal with Nasser must ask whether they accept the proposition that all Near East states are his rightful legacy and that none are entitled to assistance in defense of their integrity. How can they be sure that the Syrians are resigned to their annexation? Or that Iraq must be written off? Is Arab "unity" an instrument for subjugation?

To embrace Nasserism because we are the friend of Arab nationalism is to say that we must put up with juvenile delinquency because we love our children.

PRESSURE ON ISRAEL

Although Israel is now one of the few Near East states firmly committed to the West and, despite its size, a redoubtable source of strength for the free world, Arab propagandists have now opened an all-out campaign to make her the scapegoat for western reverses. This is an obvious prelude to pressure on Israel to make concessions to the Arabs and thus placate Nasser, a tactic reminiscent of the craven responses of European statesmen to the rise of nazism in the 1930's.

Responsible western statesmen are not likely to collaborate in any such disreputable and perverse program. Yet the mood of panic, engendered by a train of adversity, can lead to suicide pacts.

NURI AS-SAID'S TESTAMENT

This propaganda will gather impetus from an article in Life magazine written by Nuri as-Said before his death. In this "testament," the late Iraq Prime Minister damns Israel for western setbacks and complains that "Americans seem incapable of comprehending the profoundly bitter, even pathological attitude of the Arabs toward the Jews of Israel." He concedes that this is perhaps "an ugly thing but it is basic to the seeming Arab compulsion to flirt with suicide."

Yet neither the creation of Israel nor its policies figured in the pro-Nasser coup in Iraq or the siege of Lebanon. Neither Israel nor Zionism was an issue. The pro-Nasser campaigns in both countries are assaults—not on Zionism or Israel—but on Western imperialism, military moves in the overall struggle of totalitarianism against democracy.

In his youth Nuri as-Said, like his fellow nationalists, Lawrence and Feisal, was ready at Paris in 1919 to accept a Jewish Palestine. But that has generally been forgotten, and is

later years no Arab leader was more implacable in his persistent demands for concessions to appease the Arabs. Alone among the Arab States, Iraq refused to sign an armistice agreement with Israel. All last year he campaigned in London and Washington demanding slices of Israel to prove that he was a true Arab patriot—not so much because he hated Israel but because he was under attack for his prowestern policies, and he needed anti-Zionism as a shield against the frenetic Cairo radio.

It is the West—not Israel—that is the primary target of Nasser.

WHERE DOES HISTORY BEGIN?

Nevertheless, there are some pundits who are obsessed with the view that if there were no Israel the Near East would be a vast oasis of peace. Invariably these historians begin their chronicle of current developments in 1948 with the establishment of Israel.

One might reply with equal force that Western difficulties in the area began, not with the establishment of Israel, but with the demonstration of the weakness and infirmity of the West when it failed to defend Israel from Arab aggression and subsequently tolerated and condoned the Arabs' refusal to make peace.

Typical of the propagandists who seek to blame Israel is Dorothy Thompson, former head of AFME, who syndicated a bitter attack in her newspaper column on July 26. That column distorts the record and impugns the integrity of former President Harry S. Truman and former Gov. Thomas E. Dewey who, Miss Thompson charges, supported Israel in 1948 because they were vying for votes. One might enter a point-by-point rebuttal but perhaps the best answer to her (and Senator FLANDERS) is written in the passionate words Miss Thompson herself uttered to a huge gathering in Madison Square Garden on March 21, 1944. These are some of the statements Miss Thompson made:

"A people without a homeland of their own is doomed. * * *

"From one end of Europe to another, Jews sit down and weep, aye they weep, because they remember Zion. And I say: Their word should go out through all the earth and their cry to the end of the world. And there should be no speech and language where their voice is not heard.

"The opponents of Zionism are hypocrites. They oppose the Jewish homeland on behalf of the Arabs. Very well, then. What Christian country, however underpopulated, is prepared to receive all who come?

"The brutal truth is that the only spot * * * where * * * Jewish refugees were received * * * as assets and not liabilities—is Palestine. * * * And have they a right to be there?

"To whom anyhow does this earth belong? * * * I have no patience with the argument that Palestine 'belongs' to the Arabs, because they are the original settlers there, which by the way, is very dubious.

"The Near East was once a great center of civilization. * * * Only in our own times could this land be redeemed. * * * But in the whole Near East only one people have done it—and that is the Jews of Zion. * * * They are taking nothing from the Arabs. They are giving the most essential thing there is. * * * For they are saving and recreating the land.

"If all the Jews of Europe should settle in Palestine and its surroundings and do what the original stonebreakers and builders of the soil have done, there would not be fewer and poorer Arabs but more and richer Arabs in the Near East. * * * The earth belongs to its lovers and creators."

Perhaps Governor Dewey listened to her words that night. Perhaps Harry Truman, then a Senator, heard their echoes in Washington. They agreed with her then—as did most Americans who favored the restoration of Israel. Why does she now attempt to discredit their good faith—the sincerity of many other great American leaders—merely because she changed her mind?

WHERE DO WE GO?

But post mortems serve little purpose unless they help answer the question: Where do we go from here? One fact emerges from the foregoing recital. For 40 years the weak thread of appeasement runs unevenly through the fabric of our policy and the slightest stress or strain rips it apart.

The West has never confronted the Arabs of the Near East with the fundamental fact that those who claim rights must discharge their correlative obligations.

The West has tended to excuse and indulge Arab aggression, whether it is directed against Jew or brother Arab, whether it is direct attack or indirect subversion. The Arabs have never been presented with an open challenge which summons them to comply with the U. N. Charter and to make peace.

Little wonder that the Arabs have convinced themselves that Israel can and will be destroyed. This attitude is one of the basic causes of instability in the region.

Nor is there doubt that Israel's danger will grow when the time comes for western forces to withdraw from Lebanon and Jordan. The existing security shield will be gone. Arab hostility will be fanned, for Israel, a symbol of western civilization in the region, will be a special target. It will be the residuary legatee of all the hatred that has been incited against the United States and the United Kingdom in connection with recent troop movements.

It would be logical under the circumstances to fortify Israel both by firm guaranties as well as by material assistance to enable her to strengthen her economy and her defense capacity. Someday the great powers may produce an arms embargo for the Near East, but we are a long way from it, and until that day comes every democratic friend of the West should be equipped to defend itself.

Finally, the United States commitment to Israel should be spelled out in language that is understandable to everyone, including Nasser. We have just extended new commitments to the Baghdad Pact powers. There is no reason why we should hesitate to offer a firm guaranty to Israel. While the United States intervention in Lebanon was obviously reassuring, for it demonstrated that our country is ready to honor its commitments, an explicit guaranty to Israel is needed not merely to reassure the Israelis but to deter Nasser and every other Arab leader. Collective security relies on deterrence as well as intervention. It is the road to peace.

H. R. 9020

SPEECH
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. HOLIFIELD. Mr. Speaker, the House Agriculture Committee has brought up H. R. 9020 under suspension of the rules to prevent the amendments which would convert an unsatisfactory and inadequate bill into a bill worthy to be passed by this distinguished body.

If it were not in the closing days of the session, I would urge my colleagues to vote against the Agriculture Committee in this instance. But to vote against it now would undoubtedly kill the bill this year. H. R. 9020 was granted an open rule months ago and could have been properly amended to make it correspond to S. 1356 which was passed by the Senate.

H. R. 9020 will continue a mistake made in 1921 when the Congress was persuaded by the lobbyists for the Big Five meatpackers to allow the packers to escape the jurisdiction of the Federal Trade Commission.

No other segment of the food industry has ever been able to remove itself from FTC control. This has been a tremendous advantage to a few large packers which dominate the meat industry.

The Department of Agriculture has never carried out its responsibility to prevent unfair competition or monopolistic acts in the merchandising of products sold by meatpackers. As a result the two largest companies have been permitted to retain most of the monopoly powers they had established prior to 1920.

In 1947 the Securities Exchange Commission reported that Armour & Co. had more assets than all the independent packers in the United States combined. This was also true for Swift & Co.

Last year Swift sales exceeded $2,500,000,000 and Armour sales amounted to approximately $2 billion. These giant concerns, without effective FTC regulation to prevent unfair competition have been able to injure their small competitors.

This high degree of economic concentration without regulation of trade practices has also worked against the best interests of livestock producers and consumers of meat.

The Department of Agriculture lacks the enforcement staff and the incentive to prevent unfair competition in meat merchandising. The Department works closely with the meatpackers and depends on their cooperation to provide market news information and other important data essential to the Department's programs. Enforcement action against the packers would apparently jeopardize to some extent the friendly relationship that now exists and has always existed between the big packers and the Department of Agriculture.

This relationship undoubtedly explains why the Secretary of Agriculture has not issued a cease-and-desist order against a meatpacker to prevent unfair trade practices in the merchandising of packer products since 1938.

The Senate considered H. R. 9020 as a substitute for the O'Mahoney-Watkins bill, S. 1356. That body properly rejected H. R. 9020 by an overwhelming nonpartisan vote because H. R. 9020 seeks to retain exclusive jurisdiction and control over the wholesaling of meat in the Department of Agriculture.

The Senate bill, on the other hand, would share jurisdiction between the Agriculture Department and the Federal Trade Commission.

I will vote for H. R. 9020 only because legislation is necessary this year and because all logic points to an agreement in the House-Senate conference that would

include concurrent jurisdiction. Any agreement in conference which falls short of concurrent jurisdiction should be emphatically rejected by the House.

Venture for Victory

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BEAMER. Mr. Speaker, in these materialistic times, it is heartening to have evidence that other and more lasting values are being considered. On a previous occasion, I inserted in the RECORD an article describing the venture for victory program being conducted by Taylor University, Upland, Ind.

Recently, I received a newsletter reporting on this Christian venture of a group of devoted young men. Under unanimous consent, I include this newsletter in the Appendix of the CONGRESSIONAL RECORD:

VENTURE FOR VICTORY NEWSLETTER JULY 24, 1958, SINGAPORE

We had just finished a basketball game in Saigon, the southernmost city of the China Seas and the key and gateway to much of Red China's expansion program, when the news came: "American Marines have landed in Turkey to aid in the Lebanon crisis." Radios and newspapers blared stories, "Is this the beginning of the end?" Tenseness and fear reigned among the people of this Oriental nerve center. There was no peace and security in Saigon—except—in the hearts and lives of those few Christians who knew the peace that passeth understanding through faith in Christ our Lord. Yes, even that night there were some new believers in this war-torn area who knew that what they had experienced within was greater than that about them—even war. Vietnam offered us the challenge to make Christ known in a country that had the least number of Christians of any place we have ever visited. But those that we met, ministered unto our lives even though we had come to bring the good news of salvation to those who had not yet heard or believed. Highlight of the work here was with the Army of Vietnam and a special game against the American Army team with an opportunity to preach to the officers and men stationed in Saigon. The attendance and decisions were not impressive in numbers, but each member left feeling God's blessing upon those few precious days in Vietnam.

Singapore has a Communist mayor. Over half the population is under 25 years of age. It is the most cosmopolitan city we have ever visited. Tonight in the service we had Chinese, Malayan, Dutch, Germans, Syrians, Jews, Indians, British, Eurasians, Indonesians, and Americans. What is there about this man Christ that could be such a common denominator for this group as well as their Savior? This answer can only be found in His love, His power, and His concern for us. Two young Buddhists came to the Lord; also a Chinese scholar, a clerk, a public accountant, etc. This has all come to pass because you have prayed for a group of basketball players and the Lord has guided and blessed their testimonies. One rule we saw displayed for young Communists was this: "Be untiring in your exhortations." The team members have had a combined total of 50 meetings plus 14 ball games in 10 days. When we prayed with one young man at 12:30 a. m., we saw the blessings of untiring exhortation of His word.

Here in Singapore we are playing in the Happy World. It is a big amusement park and adjoining the stadium is a huge taxi dance where hoodlums and prostitutes hang out. Many of the Christians will not come to this area. We have not refused to play here because this is the area where the Gospel is needed. These people would never go to a church * * * this is definitely reaching the unreached. I cannot imagine Christ not talking to the woman at the well. When we saw many of these youth at the decision meeting following the game * * * His words "neither do I condemn thee, go and sin no more," were real again.

Now we are on our way to Kuala Lumper in the Malaya Federation. It is positively against the law here to witness or preach to a Moslem. For the first time in history they have waived this law in the stadium when the basketball team presents its halftime program. Unusual opportunities, challenging people—again a great and effectual door has been opened. We believe that His word will not return void but will accomplish the purpose wherefore it is sent.

The team has played 52 games and last night beat the best in Singapore 100–55. The total attendance is approaching 200,000 and every boy is well and busy with his responsibilities. Today at noon I addressed the Singapore Rotary Club with 200 men (including two Ambassadors) present representing 24 countries. One was from Japan and the other from East Germany. One stated to me, "The sincerity of your message assures me that there is still hope." This hope is not in bombs, not in education, but in Him who said, "My peace I give unto you. Let not your heart be troubled, neither let it be afraid." This is the message being given forth by the Venture for Victory basketball team * * * we are your ambassadors of peace here in the Orient—playing, preaching, praying for His peace to reign in the hearts of men. * * *

For the cause of causes.

DON J. ODLE,
Director, Venture for Victory.

Psychopolitics, the Basic Communist Tactic

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD I include two additional articles by that great patriot, George Todt, of the North Hollywood, Calif., Valley Times. These articles outline the basic Communist tactic, psychopolitics, and should awaken all America to this grave threat.

[From the North Hollywood (Calif.) Valley Times of Wednesday, July 30, 1958]

HOW COMMUNISTS EXPANDED

"There is treachery, O Ahaziah."—II Kings IX: 23.

The balance of an infamous address made by Beria to American traitors at Lenin University in 1936, as reported by ex-Communist Kenneth Goff in his book Brainwashing which was commenced in this column yesterday, concludes as follows:

"Psychopolitics is a solemn charge. With it you can erase our enemies as insects. You can cripple the efficiency of leaders by striking insanity into their families through the use of drugs. You can wipe them away with testimony as to their insanity. By our technologies you can even bring about insanity itself when they seem too resistive.

"You can change their loyalties by psychopolitics. Given a short time with a psychopolitician you can alter forever the loyalty of a soldier in our hands or a statesman or a leader in his own country, or you can destroy his mind.

"However, you labor under certain dangers. It may happen that remedies for our treatments may be discovered. It may happen that a public hue and cry may arise against mental healing. It may thus occur that all mental healing might be placed in the hands of ministers and be taken out of the hands of our psychologists and psychiatrists. But the capitalistic thirst for control, capitalistic inhumanity and a general public terror of insanity can be brought to guard against these things.

"But should they occur, should independent researchers actually discover means to undo psychopolitical procedures, you must not rest, you must not eat or sleep, you must not stint one tinest bit of available money to campaign against it, discredit it, strike it down, and render it void. For by an effective means all our actions and researches could be undone.

"In a capitalistic state you are aided on all sides by the corruption of the philosophy of man and the times. You will discover that everything will aid you in your campaign to seize, control, and use all mental healing to spread our doctrine and rid us of our enemies within their own borders.

"Use the courts, use the judges, use the Constitution of the country, use its medical societies and its laws to further our ends. Do not stint in your labor in this direction. And when you have succeeded you will discover that you can now effect your own legislation at will and you can, by careful organization of healing societies, by constant campaign about the terrors of society, by pretense as to your effectiveness make your capitalist himself, by his own appropriations, finance a large portion of the quiet Communist conquest of the Nation.

"By psychopolitics create chaos. Leave a nation leaderless. Kill our enemies. And bring to earth, through communism, the greatest peace man has ever known. Thank you."

That's what the man said. I will leave it to my readers to determine how prophetic some of his words may have turned out to be by this time. Incredible, isn't it?

However, students of contemporary history need look no further back into the pages turned by old father time than the military debacles of such erstwhile strong nations as France in 1940 and China in 1948 to see the fatal effects of quisling penetration in modern and machiavellian Trojan horse operations by 20th century exponents of the art of total war.

Never before has any alien philosophy of human mistreatment gained so much land and population for itself at such a low price as has the imperialistic Soviet Empire—almost without firing a shot as it were. How have the barbaric and inhuman Communists managed to succeed beyond their wildest dreams in the beginning? Who would ever have dreamed that the nondescript band of human scavengers, which took over mother Russia in 1917 would dominate nearly half the world just 40 years later? And hold the balance of mankind in terror at the same moment?

What has happened to us?

The only honest answer to this pertinent question must lie in the persistent methods of infiltration used against us by the atheistic and amoral Communist hordes. They have not beaten us to any large extent upon

the field of battle, so the answer has to lie elsewhere. We might as well face it: they have somehow very cunningly managed to infiltrate themselves, to our vast detriment, within the highest levels of Government and internal affairs.

That this happened to the United States in World War II is documented in Elizabeth Churchill Brown's famous book, The Enemy at His Back, a Bookmailer publication. Like Goff, Mrs. Brown—who is the writer-wife of columnist Constantine Brown, incidentally—evinces no naive surprise that our Government and most-prized institutions are the serious objects of Communist espionage and infiltration. Just the contrary. What is truly amazing is the typical American reaction that such things can't happen here. Cloak-and-dagger stuff, you know.

What do you think your reaction might be after reading these two eye-opening books for yourself? Why not try it and find out?

[From the North Hollywood (Calif.) Valley Times of July 30, 1958]

'PSYCHOPOLITICS' OF THE COMMUNISTS

"As saith the proverb of the Ancients, Wickedness proceedeth from the wicked."—I Samuel, XXIV. 13.

"The stupidity and narrowness of nations not blessed with Russian reasoning," says the official U. S. S. R. textbook on psychopolitics, "has caused them to rely upon practices which are, today, too ancient and outmoded for the heroic pace of our time. And in view of the tremendous advance of Russian culture in the field of mental technologies, begun with the glorious work of Pavlov and carried forward so ably by later Russians, it would be strange that an art and science would not evolve totally devoted to the alining of loyalties and extracting the obedience of individuals and multitudes.

"Thus we see that psychopolitical procedures are a natural outgrowth of practices as old as man, practices which are current in every group of men throughout the world. Thus, in psychological procedures, there is no ethical problem, since it is obvious and evident that man is always coerced against his will to the greater good of the State, whether by economic means or indoctrination into the wishes and desires of the State.

"Basically, man is an animal. He is an animal which has been given a civilized veneer. Man is a collective animal, grouped together for his own protection before the threat of the environment. Those who so group and control him must then have in their possession specialized techniques to direct the vagaries and energies of the animal man toward greater efficiency in the accomplishment of the goals of the State.

"Psychopolitics, in one form or another, has long been used in Russia, but the subject is all but unknown outside the borders of our Nation, save only where we have carefully transplanted our information and where it is used for the greater good of the Nation.

"The definition of psychopolitics follows:

"Psychopolitics is the art and science of asserting and maintaining dominion over the thoughts and loyalties of individuals, officers, bureaus, and masses, and the conquest of enemy nations through mental healing. • • •

"The strength and power of psychopolitics cannot be overestimated, particularly when used in a nation decayed by pseudointellectualism, where exploitation of the masses combines readily with psychopolitical actions, and particularly where the greed of capitalistic or monarchial regimes has already brought about an overwhelming incidence of neurosis which can be employed as the groundwork for psychopolitical action and a psychopolitical corps.

"It is part of your mission, student, to prevent psychopolitical activity to the detriment of the Russian state, just as it is your mission to carry forward in our Nation and outside it, if you are so assigned, the missions and goals of psychopolitics."

Elsewhere in this arresting book, I found such quotations from Bolshevik sources as the following:

"In this time of unlimited weapons, and in national antagonisms, where atomic war with capitalistic powers is possible, psychopolitics must act efficiently as never before.

"Any and all programs of psychopolitics must be increased to aid and abet the activities of other Communist agents throughout the nation in question.

"The failure of psychopolitics might well bring about the atomic bombing of the motherland.

"If psychopolitics succeeds in its mission throughout the capitalistic nations of the world, there will never be an atomic war, for Russia will have subjugated all her enemies.

"Communism has already spread across one-sixth of the inhabited world. Marxist doctrines have already penetrated the remainder. An extension of the Communist social order is everywhere victorious. The spread of communism has never been by force of battle, but by conquest of the mind. In psychopolitics we have refined this conquest to its last degree.

"The psychopolitical operative must succeed for his success means a world of peace. His failure might well mean the destruction of the civilized portions of Earth by atomic power in the hands of capitalistic madmen.

"The end thoroughly justifies the means. The degradation of populaces is less inhuman than their destruction by atomic fission, for to an animal who lives only once, any life is sweeter than death.

"The end of war is the control of a conquered people. If a people can be conquered in the absence of war, the end of war will have been achieved without the destruction of war. A worthy goal.

"The psychopolitician has his reward in the nearly unlimited control of populaces, in the uninhibited exercise of passion, and the glory of the Communist conquest over the stupidity of the enemies of the people."

I have quoted the above at length because I believe that no American citizen can reveal more effectively to his countrymen as to the nature of their enemy and just what they are facing presently on the world stage—and perhaps here at home as well—than the words which have emanated from the Russians themselves in this case.

This revealing insight comes at an appropriate moment—just as we are about to be hurled into a new summit conference with the masters of psychopolitics. Can we trust them?

News of the "Nautilus" Is Needed Sedation

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. NEAL. Mr. Speaker, coming at a time when the nerves of this Nation are frayed from the harangue of those who are so committed to the belief that all is wrong with the United States, that we are outdistanced and outclassed by our potential enemies; the news, I should say the greatest news in these cold war years, of the *Nautilus* opens a new era, should give great confidence and hope to all Americans. Greater than the Russian sputnik, yes; militarily much greater; possibilities unlimited, yes; perhaps, these and other similar superlatives fill the air in Washington and throughout the Nation. This, truly is good news. It is music to our tired and tender ears. This great news causes us to even hope that our critical friends, those "wavering Willies," those who are so bent on taking the administration to task about our lack of positive leadership today, and then to praising Soviet Russia tomorrow, may even quiet for a spell. It has puzzled many of us just how intelligent people could pose as opposing communism with one hand, and praising Soviet Russia with the other, could hope to make friends and influence people. Yet, for days, months, yes, and weary years this seems to be what has been happening. Boldly declaiming against communism, then following through by belittling everything that is American, and showing up the greatness of Soviet Russia, and expecting that our people, the products of our decadent capitalism and our outmoded American school system are falling so rapidly and so disastrously behind Russia; and apparently feeling that they would be accepted as true advocates of freedom and the rights of little people.

I am thinking today how early in the administration of President Eisenhower they insisted on what we then termed a "One hundred and thirty wing Air Force." That was when we used the old conventional World War II type planes. This same criticism of falling behind in our defenses was used. Suppose we had followed their thinking and stockpiled planes of that vintage. What value would they be today? Then later they pressured for us to try to match Russia sub-for-sub in the old-type submarine. Had we done this, what value would those old, clumsy, slow, only able to submerge for a few hours and limited mileage be worth to us today? Now we are told, as of this time, perhaps 20 vessels like the *Nautilus*, ready and waiting under the ice cap, would enable us to keep the peace of the world, with only such other defenses as we have in being today. Hail, *Nautilus*, and our highest compliments to those who have made her possible. Hail, also to the administration that has not been panicked by our "wavering Willies," who ostensibly oppose communism while praising Russia; who pose as patriots and at the same time try to discredit and change everything that is traditionally American.

The column, The *Nautilus* Opens a New Era, by David Lawrence, which appeared in the Washington Evening Star of August 11, is timely and I believe of interest, and I am pleased to include it herewith:

THE NAUTILUS OPENS A NEW ERA—POLAR FEAT, BARING RUSSIAN HEARTLAND TO MISSILES, SEEN MAJOR UNITED STATES BLOW

(By David Lawrence)

The United States Navy has done it again. It has revolutionized strategic warfare in the world today, as it has done several times in past history.

For while the sputniks whirl around in far-off space, their military value in relation to a precise target still much in doubt, it has been demonstrated that the atom-powered submarine, with its capacity to fire missiles, can become a major deterrent to war itself.

Most people who since school days have become accustomed to remember maps that sparate the hemispheres do not realize that the borders of Soviet Russia lie across the top of the world and are bounded by a stretch of nearly 3,000 miles of the Arctic Ocean which in turn is accessible from both the Atlantic and Pacific sides of North America. This geographical circumstance means that Soviet Russia is now vulnerable to attack by missile-carrying submarines which can fire into her heartland and reach almost any city therein with atomic weapons.

The North Pole, pivotal point for the plane-carrying bombs of the United States Strategic Air Force that can go across the Arctic directly to Soviet Russia, now becomes also the rendezvous of American submarines hiding under the big ice cap in the polar seas.

The latest exploit by the *Nautilus*—which cruised submerged from Hawaii by way of the Bering Sea along the coast of Alaska, then traversed the Arctic under the ice to a point beyond Greenland and, still submerged, headed this week for Great Britain—is startling in its military implications.

Perhaps the best way to understand the tremendous significance militarily of what has just happened is to quote from a copyrighted interview published recently in U. S. News & World Report—cleared by the Navy Department—in which Rear Adm. Hyman G. Rickover, sometimes called the "father of the atomic submarine," said:

"A large number of these missile-carrying nuclear submarines should be kept continuously at sea, submerged anywhere we want—many of them hiding under the Polar ice cap. They would constitute a fleet-in-being ready for immediate use at any time.

"That means that, if anyone declares war on us and actually fires missiles into our country—even if he should manage to destroy the United States—he knows that inevitably he himself will also be destroyed, because we will have these submerged missile-launching bases where he cannot prevent them from firing on him. So this missile-carrying submarine may turn out to be a real deterrent to war."

Admiral Rickover then went on to say:

"Consider the problem from the enemy's point of view. He can do something about missile bases which we or our Allies may have on land. He can sabotage them or overrun them, or he can fire missiles at them. But suppose these bases are somewhere in the ocean? Or hidden under the Polar icecap? How is he going to find them under millions of square miles of polar icecap?"

The Admiral pointed out that the United States has a total of 22 nuclear-powered submarines that either have been built or have been authorized and that the last 3 authorized by Congress will carry Polaris-type 1,500-mile missiles. This is a nonair-breathing rocket which has not yet been fully developed. But the Regulus-type rocket—which is air-breathing and can be fired from submarines surfacing at night—the Admiral said, are operational right now.

Thus seapower—long the bulwark of our offense and defense—joins airpower in the development of strategic concepts which, while designed primarily for use in war, can really serve to maintain world peace. For the history of international behavior has shown that, where one major power or alliance of powers has a military advantage, it can use its potential to secure respect for its words of diplomacy and thereby preserve peace.

America today, by reason of what the *Nautilus* has accomplished, is in a position once more to talk from strength. This deterrent power, emerging in an era of irresponsible dictatorships—which overnight might have pushed the world to the brink of war—can be hailed as an epochal occurrence.

The Untold Story Behind Little Rock

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. DOUGLAS. Mr. President, on the issues of life where many men act and react on the basis of emotion, fear, or hatred, those who urge the counsels of reason, understanding, justice, and law and order frequently find themselves attacked and reviled by the extremists. But their wisdom, integrity, and raw courage in speaking up for those basic processes of a democratic society and of representative government are a part of the cement that holds the American structure of freedom together despite the pressures and strains that assault it.

Harry S. Ashmore, executive editor of the Arkansas Gazette, which was this year awarded a Pultizer prize for meritorious public service, and who personally received another Pulitzer award for his editorial writing, clearly merits recognition for such service, not only from his journalistic peers, but also from many others. Mr. Ashmore has contributed to the June issue of Harper's magazine another thought-provoking article, entitled "The Untold Story Behind Little Rock." In it he calls attention to the failures of the press and other means of communication to bring to the American people the full picture of the significant developments leading up to and following the highly publicized events of last fall in Little Rock.

Because following this June there will be another September, and because what Mr. Ashmore has said in this article to his news colleagues also has an urgent meaning for public officials—who have an even greater duty to inform the people and preserve justice, law, and order—I ask unanimous consent that this article by Mr. Ashmore be printed in the Appendix of the RECORD.

I am informed by the Government Printing Office that the manuscript will run to approximately three pages of the RECORD, at a cost of $243.

I ask that the article be printed, the cost notwithstanding.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE EASY CHAIR—THE UNTOLD STORY BEHIND LITTLE ROCK

(By Harry S. Ashmore, 1958 Pulitzer prize-winner)

The executive editor of the Arkansas Gazette and author of Epitaph for Dixie—widely acclaimed as the best of recent books about the South—examines the failure of our press, TV, and radio to report what really happened in his city. His paper won a Pulitzer prize this year for meritorious public service and Mr. Ashmore himself received another for his editorials during the Little Rock crisis.

For some months now I have served, in addition to my other duties, as something of a public monument, a sight to be seen by distinguished visitors on safari to darkest Arkansas. They still come in a seemingly endless stream to view the scene of the battle of Little Rock—small, brown men from the Orient, lady parliament members from Norway, earnest students from eastern universities, pipe-smoking professors of sociology, ecclesiastics of every rank and denomination, and journalists without number. They go, usually, to look upon the site of Faubus' charge and Eisenhower's envelopment, visit the Governor in his marble sanctuary, and come finally to what a friend of mine has termed, inaccurately, I hope, Ashmore's tomb.

These visitations often provide unique intellectual exercise. It is stimulating, at least, to discuss, through a French interpreter, the States rights doctrine of John C. Calhoun with a Japanese professor of European literature. But I encounter a besetting frustration, too. With only rare exceptions the visitors—domestic no less than foreign—come with an image of Little Rock firmly fixed in their minds, an image fashioned by the millions of words sprayed through the communications mediums since the balloon went up last September. And I doubt that the image is perceptibly altered even when they gaze upon a quiet, attractive city built upon tree-clad hills where civilized people still go about their ordinary business without visible trepidation.

There is, of course, good reason why Little Rock has become a symbol that arouses strong emotions among people everywhere in the world. Events have made the very name of the city a battle cry for those on both sides of the great moral issue that has divided this Nation through most of its history, and still divides it. "Remember Little Rock" proclaims the great seal that adorns propaganda-bearing envelopes going out from the headquarters of the southern citizens' councils. The same words have been sounded by Negro hoodlums moving with drawn knives against whites in the slum streets of northern cities.

It follows that there has been considerable deliberate tinkering with the image at home and abroad. Little Rock was about as handy a package as the Russians have had handed them since they set out to woo the colored peoples of the earth. In the South (and among some of the copperhead columnists who espouse States rights above Mason and Dixon's line) a whole new mythology has evolved to fit extant prejudices against the central Government. Westbrook Pegler, for example, has solemnly contended that Old Applehead sent his stormtroopers into Little Rock to assault innocent citizens not only without legal sanction but without cause, and John Temple Graves maintains on several southern editorial pages that the mob which overran the Little Rock police force was Harry Ashmore's imaginary lion in the streets. The effort is far advanced to expunge from pliant southern memories the salient fact that Orval Faubus moved first with force of arms when he sent his State militia to seize Central High School in naked defiance of a Federal court.

WHAT THE REPORTERS DIDN'T SEE

But this I regard as incidental, a natural hazard of my trade and my time. What gives me professional pause is the odd, distorted, and grossly incomplete image of Little Rock carried around by those who got their facts straight, and in great abundance. Among my present afflictions is the gloomy suspicion that somehow as we improve the mechanical means of communication we are losing the fundamental ability to commu-

nicate; we are talking more, that is, and saying less.

In my time I have seen the mass mediums expand to include the formidable newcomer, television, and add a new dimension to the raw stuff of history. In the same span, newspapers, although financially weakened by the additional competition for attention and the advertising dollar, have improved their techniques; we get the news faster and dish it up in prettier packages. We are as free as we have ever been—which means that we are as free as our proprietors have the heart and the will to be.

Yet with all of this, we seem to be no nearer a solution to the fundamental problem that has beset us since Gutenberg perfected movable type—how to present the day's events in meaningful perspective. Indeed, in some important ways, we seem to be moving in the opposite direction. The concentration on technique can, and often has, become a sort of refuge from this more complex problem. One of the major wire services is still bemused by Dr. Rudolph Flesch's formula which seeks salvation through syntax, and holds that public understanding can be improved through shorter sentences and more frequent paragraphs. It seems to me it doesn't really matter what tools we use so long as we are prone to wake up each morning and discover a whole new world and write about it as though nothing relevant had gone before.

The Little Rock story is a case in point. It was, by universal judgment, the second biggest news story of the year—topped only by sputnik. It attracted a concentration of correspondents, photographers, and radio and television technicians comparable to that which assembles for a national political convention. The newspapers, wire services, and networks sent their best men, too—seasoned hands to handle the fast-breaking spot news and think-piece experts to back them up. For many days the story had top priority on every news desk in this country and abroad—which meant the men on the ground could count on whatever space or time it took to report their findings in full. It is fair to say that contemporary journalism's best effort went into the Little Rock story.

Let Harold C. Fleming, the perceptive executive director of the Southern Regional Council, whose business it is to chart the shifting pattern of race relations in the South, has written of the result:

"What do the millions of words and television images add up to? Have they given Americans—to say nothing of foreigners—a clearer understanding of the South's malaise? As a result of them, will the national shock be less or the insight greater if a similar eruption accompanies desegregation in Dallas or Charlottesville or Knoxville? We can hope so, but not with much optimism. Only a few major newspapers, like the New York Times, a few thoughtful television and radio commentators, and a few good magazines sought to give a meaningful perspective to their reports from Little Rock.

"Conspicuously lacking in most interpretations is any sense of continuity. The upheavals in Tuscaloosa, Clinton, and Little Rock were not isolated events, but episodes in an unfolding drama of social change."

I can file no dissent from Fleming's verdict. I was there when the cowboy reporters rode in to the scent of blood. They did not have to seek for drama; it was thrust upon them, with a complete set of heroes and villains—and these readily interchangeable, depending upon your point of view. I do not charge that the press sensationalized the Little Rock story; the facts themselves were sensational enough to answer any circulation manager's dream. Moreover, I believe that—with rare exceptions—the men and women who reported the Little Rock story were competent and conscientious. Similarly, I have no reason to believe that any but a tiny handful were bound by home-office policy or blinded by their personal prejudices.

They performed their traditional function, within the traditional limits. They braved the mob that formed for some days around the high school, they interviewed the principals on both sides and many of the minor characters, they sketched in personalities and filled in color, and some at least tried hard to define the feeling of the community. Over a period of weeks they did a reasonably accurate job of reporting what happened at Little Rock—but as Fleming has said, they have failed to tell why it happened.

THE UNFINISHED STORY

And the reason, I think, is that to American journalism the Little Rock story had an arbitrary beginning and end. It began the day Governor Faubus surrounded Central High School with his State guard. It continued so long as there was a naked edge of violence. It ended when Federal troops restored a surface order to the troubled city. It has had subsequent footnotes only when the edge of violence reemerged in clashes between white and Negro children inside the school. It survives in the press today largely in the sort of occasional oblique reference that passes for background of more immediate news.

Yet, it is quite obvious that the Little Rock story did not begin in September. It is equally obvious that it has not ended yet. For Little Rock was simply the temporary focus of a great, continuing, and unresolved American dilemma which touches upon fundamental concepts of morality, of social change, and of law. Journalism has concentrated on only the exposed portion of the iceberg; the great, submerged mass remains uncharted.

It was, admittedly, an extraordinarily difficult story to handle. A journalist is trained to seek out spokesmen for both sides in any controversy. They were readily and anxiously available in Little Rock. The case for resistance to the Federal court's desegregation order was made at length by Governor Faubus, and bolstered by the more flamboyant utterances of the unabashed racists in the citizens' councils. The case for compliance was made by the local school officials, the mayor of the city, and—belatedly—by the President of the United States, with somewhat more passionate arguments freely offered by spokesmen for the National Association for the Advancement of Colored People.

But this was a controversy that had three sides. Caught between the committed and dedicated partisans was a substantial and silent mass of plain citizens—confused and deeply disturbed. They were people who deplored desegregation and also deplored violence. They felt, many of them, a deep compassion for the nine Negro children exposed to the anger and contempt of a white mob. But they also felt that the Negro children should not be attending the white school in the first place. They had been, most of them, willing to undertake what they considered the unpleasant duty that had been required by the courts.

But then, at the last moment, their governor had stepped forward and proclaimed that what they had accepted as the law was without substance—and that their failure to resist desegregation amounted to treason to their own traditions and to their own people.

It is true that most of those who accepted this thesis (and the majority have, to some degree) did so with conscious rationalization. But it is also true that when emotion triumphed over reason they did not actively join the crusade of the governor and the citizens' councils; rather they simply subsided into troubled silence and by so doing withdrew their support from those few who attempted to stand against the tide. And because they were silent, their attitude went largely unreported. The press took due note of the fact that in fairly short order Governor Faubus was in command of the field; but here again it did not explain why—which is the heart of the story.

It can be argued that these matters are too subtle for the proper practice of journalism—that those who rode to Little Rock as though it were a four-alarm fire could not be expected to plumb the hidden attitudes of the populace, and indeed that the effort to do so would represent a dangerous departure from proper standards of objectivity. Perhaps so. But there were other aspects of the Little Rock story that were equally vital and by no means so elusive. There was, conspicuously, the failure of leadership in Washington which matched the default of southern leadership, and made the ultimate showdown between State and Federal force inevitable.

NEWS THAT DOESN'T HAPPEN

Before pursuing this thesis I should, perhaps, note that I am (to borrow SAM RAYBURN's description of himself) a Democrat without suffix, prefix, or apology. It should be noted too that I spent 10 months in the wilderness with Adlai Stevenson in 1956, when the Democratic candidate's cries on this subject, along with all others, were largely unheeded. But, making all due allowance for my prejudice, I submit that the record shows that from May 1954, when the United States Supreme Court reversed the old Plessy doctrine, until September 1957, when the chickens finally fluttered in to roost in Little Rock, the Eisenhower administration took no affirmative action to pave the way for the sweeping legal change the Court required or to temper the inevitable dislocations it would occasion. Indeed, the incredible fact is that the administration, without preliminary, moved directly to the ultimate resort of armed force, and then was confounded by its own belated audacity.

It required no delicate fingering of the public pulse to chart the course of growing defiance in the South. It was evident in violent utterances by some of the South's public men and in the silence of others. It was made a matter of record in the passage of a variety of restrictive laws in the southern legislatures. A conspicuous public monument was erected in Washington when 100 southern Members of the Senate and House signed their breast-beating manifesto in the spring of 1956.

Yet Mr. Eisenhower's only reaction to all this was an occasional bemused press conference statement about the difficulties of changing the minds and hearts of men. His administration, it is true, made token efforts to pass stringent civil-rights legislation—which only served to lacerate the southerners in Congress and certainly had an adverse effect upon their minds, hearts, and spleens. And, of course, Vice President NIXON, in the days before he sheathed his hatchet, joined other administration spokesmen in making proper obeisance to their party's Abolitionist tradition when campaigning in those areas where the Negro vote is heavy.

But at no time did Mr. Eisenhower attempt to use the moral force of his office to persuade southerners of the justice of the course the Supreme Court required of them, or his great personal prestige in the region to allay their fears that they were being forced into a revolutionary rather than an evolutionary course. Nor did he employ the vast political powers of his office to negotiate with the recalcitrant southern political leaders from a position of strength.

I am not one who supports without reservation the thesis that the Republican allegiance of most of the proprietors of the press has been translated into a conspiracy to wrap Mr. Eisenhower in bunting and protect him against criticism. I do not believe

that this was a primary cause of the conspicuous failure of the press to take due note of the troubles that were shaping up in the South, and of the administration's apparent unawareness. I suspect that it stems rather from the limiting journalistic axiom that what happens is news, and what doesn't isn't.

Thus the reporters rode into the region only when there was action—when a couple of red-necked hoodlums in backwoods Mississippi dropped Emmett Till into a river, or a mob ruled that Autherine Lucy couldn't attend the University of Alabama, or John Kasper incited the citizens of Clinton to wrath. In between, an occasional reporter, usually from one of the magazines, toured the region—but these too often caught only the sound and the fury on the surface. A notable example was the series in the Saturday Evening Post last summer, The Deep South Says "Never." The author, John Bartlow Martin, is a competent and conscientious practitioner, but his pieces were largely distilled from the utterances of the extremists without qualifying balance. The certainly unintentional result was to give national credence to the contention of the councilmen that they spoke for the whole of the southern people, and the council leaders themselves regarded the Post series as invaluable propaganda in their campaign to enforce the doctrine of brute resistance upon the silent majority. But the other and equally essential part of the story—the drift in Washington—went largely unnoticed except by a few peripheral critics who address a limited audience.

THE POLITICAL DEAL

If the reporting of the prelude to Little Rock was conspicuously inadequate, it seems to me that the postlude provides an even more distressing example. The stirring martial events of September were, it is true, somewhat confusing—particularly when President Eisenhower and Governor Faubus held their historic peace conference at Newport and there remained some doubt as to who emerged with whose sword. Out of the communiques issued by the White House on this occasion, however, and the later meeting with envoys from the Southern Governors' Conference, there emerged an assumption that the executive department of the Federal Government was prepared to back to the utmost the orders of the Federal judiciary.

This notion was reinforced by the arrival of the 101st Airborne Infantry, and by the presence in Little Rock of so many FBI agents they created a problem of hotel accommodations. Indeed, there was public and official talk of a vast document compiled by the FBI, at the direction of the United States Attorney General, presumably in preparation for court action against those who were clearly defying the injunctions of a Federal judge. During those fall days the embattled Little Rock School Board—under fire from the State government for carrying out the judge's order and deserted by a city administration intimidated by a show of political strength by the citizens' council—waited for the Federals to ride to their aid. All they got, as it turned out, was withdrawal of the regulars of the 101st and a perfunctory detail of federalized National Guardsmen, under orders to observe but not to arrest any malefactors within the school.

It soon became apparent that this was far from enough to preserve any semblance of order. The mob which once came close to forcing entry into the school did not reform, it is true, but it didn't need to. A far safer course was to inspire a small group of white students to undertake a campaign of harassment against the isolated Negroes. And as it became apparent that Washington had done all it was going to do, the citizens' councils became bolder and bolder in their campaign of intimidation, coercion, and boycott directed against any who dared dissent from the defiant course they had charted. The campaign bore tangible fruit in the expulsion of 1 of the 9 Negro children who had responded in kind to calculated mistreatment—an event greeted by the appearance of cards on the lapels of the student activists bearing the cogent notice: "One down—eight to go."

Here again, in spasmodic, uncoordinated fashion the surface of these events has been recorded by the press. But the other and more significant portion of the story has attracted little attention. In Washington, the decision to leave to the Little Rock School Board the entire burden of carrying out the Court order against impossible odds has never been officially announced, but has been clearly acknowledged by the Department of Justice. The new Attorney General, William P. Rogers, said that there were no present plans for further legal action in Little Rock. He further noted that the administration would not press for additional civil-rights legislation at this session of Congress—a matter of some moment since the Justice Department had previously used as an excuse for inaction at Little Rock the failure of the enforcement provisions in the last civil-rights bill.

These pronouncements were followed by one of the most remarkable scenes enacted on Capitol Hill since the passage of the Missouri Compromise. Mr. Rogers appeared before the Senate Judiciary Committee to be interrogated as to his fitness as Attorney General, received cordial greetings, and was recommended for confirmation without a single question being addressed to him regarding his past or future course in the Little Rock case—and this before a committee that counts among its members Senators JAMES EASTLAND, of Mississippi, and OLIN JOHNSTON, of South Carolina. This singular occurrence was accorded no more than passing mention in the press and no one of consequence speculated in print or on a television tube as to the dimensions of what must have been one of the most singular political deals in recent years.

TIME FOR WHAT?

Just as the Little Rock story did not begin in Little Rock, it will not end there—whatever the ultimate fate of the eight children still remaining in the beleaguered high school at this writing. These events have already had tragic consequences in Arkansas and the South; those who were disposed to support an orderly adjustment to the new public policy have been discredited and disarmed—not alone by the extremists who are now in control, but by a national administration which deserted them in the first collision between Federal and State force and declared in effect that the rule of law propounded by its own courts is not enforcible. And so, by default, what began as a local issue has been built into a national constitutional crisis.

And it is no less than that—perhaps the most critical the Nation has faced since 1860. I do not suggest that civil war is imminent, because, of course, it isn't. I do say that the drift in Washington has gravely compounded the dislocations that were made inevitable by the historical developments affirmed by the Supreme Court in 1954, and has left the country sharply divided on a complex moral and social issue at a time when national unity could be the price of national survival.

There are many who share the blame. There is reason to wonder if our system of education has served us adequately when in its ultimate flowering it has produced a generation, North and South, that appears not only unable to grasp the implications of the race problem but unwilling to face it squarely. I have said of the South that its besetting problem is not the accommodation of the rising aspirations of its Negro people, difficult as that may be, but its inability to reduce the issue to rational terms. In slightly different context, the same thing is true of the non-South—called upon now to translate its pious principles into action and blinking painfully over the mote in its own eye.

But my concern is with journalism. No one can say with certainty that the course of events in the South could have been altered had the President exercised firm leadership—or that Mr. Eisenhower would have been disposed to act even if the alarm had been sounded by those who are supposed to man the watchtowers of public affairs. And now, after the fact, this is perhaps not of consuming importance. But the watchtowers remain largely silent still, and I suggest that this is a matter of pressing concern.

For it seems to me that the American people are still not aware of what Little Rock really demonstrated—the shocking fact that not only did the administration have no plan to meet the crisis at Little Rock when it came, but even now, with all the bitter lessons before it, still has charted no effective course of action nor displayed any disposition to do so.

I am the first to argue that time is of the essence in any resolution of the problem. In so delicate an area of human relations change must be evolutionary. Yet time is of value only if it is put to some practical use; perhaps the most cogent single question yet raised was that put by Francis Pickens Miller of Virginia to a group of Southerners who at a national conference were pleading for a breathing spell.

What, he asked, did they propose to do with it?

It is clear that the southern leadership has no program and no policy except the negative one of delay at any price—and part of that price will be a steady deterioration of race relations across the whole of the Nation, with a corollary impact of great significance on our sagging foreign policy. In the face of this, the administration has offered nothing except the politician's usual device for postponing unpleasant decisions—the creation of a study commission, which, if it does not founder on its partisan division, at some distant date presumably will come up with the facts the press should have been setting forth all along.

These then are some of the aspects of the Little Rock story which seem to me to be largely unrecognized or generally misunderstood despite the millions of words that have adorned the front pages and boomed through the loudspeakers. I suppose that a patient man with endless time on his hands might have put together the lurid fragments that were hurled at him and divined their meaning—but readers and listeners are usually both impatient and busy. It remains, then, journalism's unfulfilled responsibility to somehow provide perspective and continuity—to add the why to the what.

How can it be done, in the face of the real and in many ways growing, limitations of time and space that beset all of us who live by the clock? I will confess that I have no ready answers. But I do know the task is urgent and steadily becoming more so.

And I think perhaps it begins with recognition that this is so—and that, valid as they may be, the excuses we newspapermen have made to our selves in private, and the proud boasts of rectitude our promotion managers commonly make in public, are no longer good enough. I think we have got to get over the notion that objective is achieved by giving a sinner equal space with a saint—and above all of paying the greatest attention to those who shout the loudest. We've got to learn that a set of indisputable facts does not necessarily add up to the whole truth.

Perhaps what we need most of all is simply the courage of our own convictions—to recognize that news is not merely a record of ascertainable facts and attributable opinions, but a chronical of the world we live in cast in terms of moral values. We will err, certainly, and we will be abused—but we will at least be in position in the watchtowers, trying to tell the story in all its dimension.

United States Foreign Policy

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. WILEY. Mr. President, I have prepared a statement in regard to our foreign policy and the attitude of some of us on that subject. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

From time to time my colleagues on the other side of the aisle have utilized the Senate as a forum to discuss the foreign policy of the United States. For the most part their remarks have been fair and they have avoided injecting partisan considerations into their discussions.

They are to be commended not only for the light which they have shed on many of the problems we face in this precarious world, but for the support which they have given to the programs of the President.

In recent weeks, however, my Democratic colleagues have begun to harp on the theme that the administration has failed in leadership; that somehow the administration is to be held responsible for the fact that the world of 1958 is a precarious place in which to live.

I have searched these recent speeches for the positive suggestions which are allegedly lacking in the present leadership. I have sought to separate the wheat from the chaff. I am frank to say that I have found remarkably few kernels of wheat amongst all of the words that have been launched on this floor.

It is always easier, to demand an idea, than to develop one.

I do not deny that from time to time we read in the press or find in the remarks of my colleagues the germ of a new idea. But many, many times those ideas which are supposed to be positive in character are nothing more than glittering generalities or procedural gimmicks.

Among the generalities we hear such suggestions as:

NATO should be strengthened; or

NATO must concentrate on economic problems; or

The Algerian problem should be settled by giving Algeria commonwealth status; or

We should concentrate on economic aid instead of military aid; or

We must pay more attention to Latin America, or Canada, or Southeast Asia, or the Middle East.

I must say if I were the Secretary of State I would certainly not know what to do with advice of this kind. The Secretary of State must live in a world of reality.

There may be some things he can do and some actions he may take which will induce change in the current of events. But I suggest that much of what happens in this world is outside the control of the United States.

It is unrealistic to expect that a note from Washington will force nationalism into constructive channels; or that a word from the President will settle a constitutional crisis in France, or Lebanon; or, for that matter, even in a neighboring Latin American country.

It is a wise man—it is a wise nation—that realizes its own limitations.

It seems to me that one of the first steps toward international responsibility would be for the American people and their representatives in Congress to realize our limitations. This is the first step toward wisdom.

We cannot legislate peace and security throughout the world.

We cannot extend a little aid here and there and expect automatically that our troubles will be over.

Certainly, this Nation is not without influence throughout the world. But at the same time we must realize that our influence is in many instances of a marginal character.

I can illustrate this fact by referring to the situation in India and in China.

During recent floor debate it was suggested that massive doses of economic assistance to India would somehow be decisive in preserving her independence from Soviet control. It was argued that India should not be lost to freedom, as was China—a loss attributed to a failure to give Generalissimo Chiang timely help.

My point is that the loss of China to the side of freedom and the preservation of Indian independence are events of such magnitude and complexity that what the United States does or fails to do is not necessarily decisive. In short, our sights must be geared to reality. Unless the United States imposes a Pax Americana on the world—which I do not think we could or should do—what this Nation may do in the world is important, but not by any means of controlling significance.

I labor this point in order to inject some reality in our thinking about problems of international relations. It is time for us to realize that Dwight Eisenhower is President of the United States, and not omnipotent in the world. It is as unrealistic to give him credit for all that is right about the world as it is to hold him responsible for all that is wrong with the world.

The same may be said of Mr. Dulles. He handles the foreign relations for the United States, and, despite our undoubted power and influence, Mr. Dulles cannot snap his fingers and bring peace to the Middle East, or restore the satellites to freedom.

If India is to preserve its independence, it will be largely because of what the Indian people and their leaders do for themselves. And the same is true with respect to many of the other problems with which nations are burdened.

The United States, with the most admirable foreign policy we could dream up, can only be of marginal influence on the future of the Middle East, of Africa, of South Asia, and of the Far East. This is not to say that we should throw up our hands in hopelessness. It is only to emphasize that good intentions may pave some roads, but that the hard work of salvation, the building of the trails and the heaviest work must come from the peoples who are principally concerned.

We are doomed to continuing disappointment in our foreign policy if we do not learn to keep our feet on the ground and to base our policies on reality instead of fancy.

I would warn also, against allowing ourselves to be taken in by what I would call procedural gimmicks.

We cannot expect to solve our problems in Africa by creating an Assistant Secretary of State for African Affairs—even though I support that proposition.

We are not going to solve problems of our relationships with Latin America by rushing headlong into an all-American summit meeting.

We are not going to bring peace to the world by grasping blindly at summit conferences with the Russians.

Procedural gimmicks are not without use, but let us not condemn the President or Mr. Dulles because they have not grasped at the procedural gimmicks put forth on the floor of the Senate or because they have not dreamed up a few such gimmicks of their own.

There have been many times over the years I have served in the Senate when I have seen my colleagues on both sides of the center aisle in moods of frustration. Many times this frustration had risen out of events in the field of foreign relations.

I recall the years when Members on this side of the aisle were frustrated with the foreign policies of members of the other party who controlled the executive branch of the Government. I detect in some of the remarks that I have heard in recent months here that my Democratic friends have felt some frustration with the foreign policies of 1958.

Now, frustration is a normal, human, emotion. It has its place in life. But let us remember that frustration is an emotion and as such it does not provide a solid basis upon which to build a foreign policy.

I do not propose to stand on this floor today, or any other day, to try to tell the President of the United States how to conduct the foreign policy of the Nation. Although it is the purpose of our forign policy to promote peace and freedom in this world so that the values we cherish and nurture may forever be preserved, that purpose may best be achieved if we leave its day-to-day direction to our President.

One of the popular topics for students of foreign affairs is the role of Congress in the formulation of foreign policy. This topic is more popular than simple. Indeed, it is perhaps easier to describe what the foreign policy role of Congress should not be than it is to describe what that role should be.

Certainly, it is not the role of Congress to quarterback every move which the President and the Secretary of State undertake. If 531 Members of Congress were to undertake that duty, the main effect would be to telegraph our punches to every nation in the world, friend and foe alike.

Clearly, it is not the role of Congress to second guess every act of the Executive, telling him how something should have been done. It is easy to be smart after the event—but this kind of smartness is not very helpful.

The Congress cannot expect to substitute for the executive departments in the gathering of information upon which our foreign policy must be based. We cannot substitute for the thousands of able, devoted, members of our Foreign Service who are stationed throughout the world.

Finally, it is not the role of Congress to "bird dog" the Secretary of State as he wends his way through the jungles of international relations.

Yet Congress has a positive role to play in the formulation of foreign policy. I would stress that in discharging this role, however, Congress proceed on the basis of a little bit of faith. We should certainly assume that the President and the Secretary of State are conscientiously working to promote the interests of the United States.

Mr. Dulles is one of the hardest working Secretaries of State this Nation has ever had. He may make mistakes, even as Members of the Senate do on occasion, but no one can deny that his actions spring from the highest motives and his labors have been far and above the calls of duty.

It seems to me that the principal role for Congress in the field of foreign policy is to try to keep the people and the executive in

tune. In other words, Congress is exercising its proper role when it serves as go between. In some instances, this means that we must go to our constituents to explain to them and help them understand the reasons why certain foreign-policy actions may be necessary. In other instances, it is our duty to go to the executive and pass on to it the views of the American people.

We must help to link the commonsense of the American people with the facts and the expert advice we receive from those Americans who are engaged in the day to day strategy of foreign policy.

A good example of the need for explaining certain policies to our constituents can be found in the mutual security legislation upon which we act each year. Of course, the President can, as we say, "go to the people," but I have never been convinced that he can do the carefully tailored job of explaining and answering the many questions which Americans have about the need of this program. That is our job.

It has been my experience that my Wisconsin constituents are quick to grasp the importance of the mutual-security program to our own security when I can sit with them and describe in detail the consequences of failure to keep that program going.

A good example of the influence of the people in getting the executive branch to tailor its programs to the felt needs of the American people was found in the wartime resolutions expressing the sense of Congress that the United States should help to create and should join a postwar international organization devoted to the maintenance of peace. And in more recent years, I am convinced that it has been the constant pressure of the American people which has kept the executive hard at work in seeking reliable means to suspend nuclear tests, despite the difficulties of negotiating with the Russians in this important field.

Our Government is a Government of separation of powers. It works best if the executive, the legislative, and the judicial branches tend to their own knitting. Yet we see many instances in which individuals in these branches of the Government are tempted to tell other branches how to do their work while they neglect their own responsibilities. This tendency must always be resisted.

Fortunate indeed are we that our Founding Fathers devised constitutional safeguards to keep our branches of Government separate in the discharge of their duties, and unfortunate indeed are we that the American people can sit in ultimate judgment of our faithful discharge of our constitutional duties.

Tolls on the St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, statements by John J. Halloran and Frank L. Orfanello, representing the Maritime Association of the Greater Boston Chamber of Commerce. I ask also that letters to Mr. Halloran from a number of prominent citizens in Boston be printed as well.

The subject of these statements and letters is of great concern to the ports of northeastern United States. The statements and letters express very well the point of view of the port of Boston with respect to the tolls which are now to be established on the St. Lawrence seaway.

Congress was very clear, Mr. President, in authorizing the St. Lawrence seaway, in providing that it should be self-liquidating over a period of 50 years. Congress recognized full well the injustice of supporting with tax revenues the operation of the St. Lawrence seaway, since much of the tax revenue would be derived from ports in direct competition with the seaway.

I think the statements of these gentlemen, Mr. President, are worthy of our attention, inasmuch as they are in affirmation of the objective which Congress made so clear in authorizing the seaway project.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF EVIDENCE AND VIEWS FOR RULES OF MEASUREMENT AND TOLLS HEARING

My name is Frank L. Orfanello, director of the Port of Boston Commission. Our business address is 14 Court Square, Boston, Mass.

The Port of Boston Commission is an agency of the Commonwealth of Massachusetts, created to promote the waterborne commerce through the port of Boston.

It is our considered judgment that the tolls, as recommended by the United States Tolls Committee, are inadequate.

We realize that the proposed tolls have been recommended after considerable study and deliberation. We are of the opinion, however, that the income realized from said tolls will be insufficient to amortize the cost of the seaway pursuant to legislative mandate.

Public Law No. 358, 83d Congress, May 13, 1954, authorizing expenditures for the seaway is very explicit that moneys expended pursuant to said act shall be repaid over a period of 50 years.

The Port of Boston Commission, therefore, is unalterably opposed to any subsidy from the United States to the St. Lawrence Seaway Development Corporation.

STATEMENT OF MARITIME ASSOCIATION OF THE GREATER BOSTON CHAMBER OF COMMERCE IN CONNECTION WITH RECOMMENDATIONS OF TOLL COMMITTEE TO ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

Mr. Chairman, my name is John J. Halloran, and I appear as the representative of the Maritime Association of the Greater Boston Chamber of Commerce. Our business address is 80 Federal Street, Boston, Mass.

The Maritime Association is a voluntary organization with approximately 200 corporate and individual members, all of whom are interested in the development of waterborne commerce of the port of Boston. The members are engaged in various forms of maritime business: Steamship owners, agents, importers and exporters, customs brokers, terminal operators, warehousemen, towboat owners, truckmen, stevedores, and other types of maritime endeavor. Collectively, all are substantial employers of labor and all depend for their economic welfare upon marine activities.

Our prime concern in the present proceeding is the hope and desire that the statutory requirements for the St. Lawrence seaway development shall be effectuated. This is particularly important in the matter of tolls for the very basic reason that any deficiency would be made up by Federal revenues derived from citizens and operations in a competitive situation with the seaway.

We fully believe that the tolls committees of Canada and the United States have every intention of complying with the mandate of Congress that the seaway shall be self-sustaining and, in particular, we have every confidence that the United States Tolls Committee has no intention of creating a Government-subsidized facility.

However, we do not agree that their tolls structure will meet the statutory requirements of a self-supporting operation. We may further state that we consider their proposed substantial deferment of capital payments is not a businesslike concept of a project of this nature.

We agree to the tolls committee estimate of total tonnage movement at the outset but there remain many unknown and uncertain factors. Just a slight percentage change in a revenue and in an expense item would or could create havoc and jeopardize the whole tolls structure.

Even though we accept the committee's tonnage figure, which we consider very optimistic, our analysis does not bring about revenue approaching that of the committee.

In opening its report on the tolls structure the United States tolls committee states that it has had the benefit of views advanced by interested public authorities and others. The most outstanding public authority appearing in favor of the seaway was probably the United States Department of Commerce. Its staff devoted much time in a study of potential traffic and toll structure. Secretary W. A. Harriman, in 1947, and Secretary Charles Sawyer, in 1951, testified that the Department of Commerce believed that basic tolls should be 50 cents a short ton on iron ore, $1.25 a short ton on general cargo, and a ballast rate of 15 cents per deadweight ton. Considering that a deadweight ton is at least 60 percent more than a gross ton this ballast rate suggestion becomes 24 cents a gross ton, just four times the rate recommended by your toll committee. These toll charge estimates by the Department of Commerce were generally agreed to by advocates of the seaway at the time.

In a comparison of the proposed rates by proponents of the St. Lawrence seaway in 1947 and 1951 with the suggested schedule submitted by your tolls committee we call attention to the cost rise during the period between 1947 and 1958 and we should invite your consideration to the following standard cost indexes:

Consumer Price Index: United States Department of Labor (1947–49 equals 100), April 1958, 124.5.

Construction Cost Indexes: Department of Commerce (composite) (1947–49 equals 100), April 1958, 138. Engineering News Record (1) building (1947–49 equals 100), April 1958, 153.3, May 154.1; (2) construction (1947–49 equals 100), April 1958, 165.9, May 167.2.

These price trends clearly show that rates should be higher than proposals of 11 years ago; certainly there is no justification for lower schedules.

We submit that you should be particularly concerned at the extremely low rates recommended for bulk iron ore and ballast voyages. Your tolls committee states that 90 percent of the seaway traffic will be bulk cargoes which bulk cargoes will in the main call for ballasting one way. To propose special bargain rates on the most important segment of the traffic seems entirely in violation of good business judgment.

The basic philosophy of your tolls committee appears to be shown by the following sentence on page 7 of their report:

"This means that the estimated traffic during the initial years of a development

period is not expected to produce revenues sufficient to meet total annual charges."

Now turn to page 5 of their report from which we quote the following:

"The traffic through the seaway will be of the same general character as that now transiting the St. Lawrence Canals and the Welland Canal."

This is not a new business or new development. It does not call for price inducements or loss items to attract the uninitiated. The St. Lawrence has been a going concern in the domestic and foreign transportation system for many years. The so-called seaway is merely an enlargement or improvement of an old well-known waterway.

Furthermore, it was the clear intent of Congress to require that tolls should produce revenue to meet total annual charges. An examination of Public Law No. 358, 83d Congress, May 13, 1954, section 12 (b) and the paragraphs following will show that no authority is given the St. Lawrence Development Corporation to defer any of the specific expenses named.

On the contrary, it provides that toll charges shall be calculated to cover all costs of operating and maintaining the works under the adminitsration of the Corporation including depreciation, payment of interest on the obligations of the Corporation, payment in lieu of taxes and amortization of the principal of the debts and obligations over a period not to exceed 50 years. Clearly, all these items of expense are to be met from revenue and nowhere do we find any authority is vested in the Corporation to defer any of these payments. We have further noted that your tolls committee has made no provision for any reserve to compensate for increasing costs, periods of reduced business, accidents, or casualties causing partial or complete stoppage of traffic. To provide a uniform, average annual cost figure over a period of 50 years into the future, does not seem to conform with good sound economic or business practices.

We urge your careful consideration of all these conditions, as we are confident you will find it necessary to substantially increase the rates proposed by your tolls committee in order to meet the mandate of Congress for a self-supporting St. Lawrence seaway.

BOSTON AND MAINE RAILROAD,
Boston, Mass., July 29, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association, Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLORAN: We have read and endorse the statement you are to make at the hearing in Washington on August 6, 1958, before the St. Lawrence Seaway Development Corporation, and we authorize you to so record us.

We believe the seaway should be self-sustaining, and that to make it so, compensatory tolls should be levied in accordance with the law.

Sincerely,

P. J. MULLANEY.

FOREIGN COMMERCE CLUB OF BOSTON, INC.,
Boston, Mass., July 31, 1958.

Mr. JOHN J. HALLORAN,
Maritime Association, Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLORAN: I have read your prepared statement to be made at the St. Lawrence seaway hearing in Washington on August 6, 1958.

As a member of the port advisory council representing the Foreign Commerce Club of Boston, I subscribe heartily to your position and statement and you may accept this as authority to state that we concur fully in your presentation.

Very truly yours,
FOREIGN COMMERCE CLUB OF BOSTON,
T. R. WELCH.

MASSACHUSETTS WAREHOUSEMEN'S ASSOCIATION,
Boston, Mass., July 30, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association, Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLARAN: At a meeting of this association's executive committee held yesterday, I was instructed to place the Massachusetts Warehousemen's Association on record with you as being in complete accord with the statement of the Maritime Association prepared for presentation at the hearing by the St. Lawrence Seaway Development Corporation in Washington on August 6, 1958.

We strongly endorse your position on the tolls proposed by the Tolls Committee and you may use our name as being one of the organizations that supports your statement.

Sincerely,

L. F. FOSTER,
Executive Director.

THE PROPELLER CLUB OF THE UNITED STATES, PORT OF BOSTON, INC.,
Boston, Mass., July 29, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association of the Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLORAN: As chairman of the legislative committee of the Propeller Club of the Port of Boston I am authorized to write to you and endorse statement of Maritime Association of the Greater Boston Chamber of Commerce in connection with recommendations of Toll Committee to St. Lawrence Seaway Development Corp., which you intend to present on August 6, 1958, at Washington, D. C.

We feel that the material appearing in this statement is a realistic analysis of the general economics of the situation on a national basis.

Very truly yours,

JOHN O. PARKER.

THE FIRST NATIONAL BANK OF BOSTON,
Boston, Mass., July 30, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association, Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLORAN: As representative of the Boston Clearing House Banks on the advisory council to the Port of Boston Commission, I want to endorse the statement which you propose to make before the St. Lawrence Seaway Development Corp., at the hearing in Washington on August 6, 1958, in connection with the recommendations of their Toll Committee.

The rates now being proposed by the joint toll committee are considerably lower than original schedule of tolls that were suggested when this project was in promotion and legislative stages and we do not see how anyone can accurately estimate potential traffic through the seaway at the present time. It is our feeling, therefore, that the original schedule of rates should be adopted until such time as actual experience over a period of 3 to 5 years proves what the exact cost of operation and the tonnage are going to be. We feel that there is no proper way to arrive at fair and accurate toll figures except by actual experience and the rates can be adjusted at a later date, if necessary. At the present time it is extremely important that the toll rates be established at a figure which is adequate to cover all costs of operating and maintaining the seaway, including depreciation, interest on the outstanding debt of the corporation, and amortization of the principal over a period not to exceed 50 years so that the taxpayers of the United States will not be called upon to subsidize this project.

Sincerely yours,

R. M. BINNEY.

BOSTON SHIPPING ASSOCIATION, INC.,
Boston, July 24, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association of the Greater Boston Chamber of Commerce, Boston, Mass.

DEAR MR. HALLORAN: Now that the St. Lawrence seaway is becoming a reality, the members of our association are very much concerned. They feel very strongly that proper tolls should be levied, and that the seaway must be self-sustaining. They do not want taxpayers in this area to subsidize the seaway in the event the tolls or revenue are not sufficient.

Our association is comprised of 32 members engaged in maritime activities in the port of Boston and vicinity, and provides a payroll for labor in excess of $10 million annually. In addition, accessorial services expend additional moneys. Members of this association are steamship owners and agents, contracting stevedores, contracting watching agencies, contracting linehandlers, contracting ship cleaners, and terminal operators and warehousemen. We attach a list of the individual members.

The Boston Shipping Association, Inc., heartily endorses your statement to be made at the St. Lawrence seaway hearing on August 6 in Washington, D. C.

Yours very truly,

ARTHUR LANE, *President.*

PLYMOUTH CORDAGE CO.,
Plymouth, Mass., August 1, 1958.

Mr. JOHN J. HALLORAN,
Manager, Maritime Association of the Greater Boston Chamber of Commerce, Boston, Mass.

DEAR JOHN: I received in the mail the statement you are to present at Washington in connection with the Toll Committee of the St. Lawrence Seaway Development Corporation.

You have the endorsement of the Associated Industries of Massachusetts. Hope this will add some support to the presentation.

Thanking you, I remain,
Sincerely,

E. N. MAYER.

United States Proposals for the Near East

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, which appeared in the Evening Star, Washington, D. C., on Thursday, August 14, 1958, entitled "United States Proposals for Near East."

I commend this article to the reading of every Member of this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES PROPOSALS FOR NEAR EAST—EISENHOWER TALK HELD SIGN OF STAND FOR INDEPENDENCE OF SMALL NATIONS

There have been great addresses in the past by Presidents of the United States in the periods preceding big wars, but none

that has been the equal of the speech delivered by President Eisenhower to the United Nations General Assembly with the aim of preventing a world war from breaking out over the Near East situation.

It was an impressive message because it reiterated the traditional principles for which the United States has consistently stood throughout its history. It will be effective throughout the free world, primarily because the address reflects bipartisan support here. This is but another way of saying it is a true expression of the purposes and intentions of the people of the United States.

For the speech means that America has not yielded in her firm insistence that the independence of small nations must be protected against any aggression by a major power, even if measures of protection bring on a crisis of major proportions.

The President at the very outset spoke of "the danger that nations under aggressive leadership will seek to exploit man's horror of war by confronting the nations, particularly the small nations, with an apparent choice between supine surrender or war." He added: "This tactic reappeared during the recent Near East crisis. Some might call it 'ballistic blackmail'."

Mr. Eisenhower in those few sentences served notice that the American people would not be terrorized, would not appease dictatorships and would not compromise on basic principles of national sovereignty. He denounced the cry of aggression which the Soviets have raised against the military aid given by the United States at the request of the Government of Lebanon. He said that, "If it is made an international crime to help a small nation maintain its independence, then indeed the possibilities of conquest are unlimited."

Here, therefore, is the great cause to which the President says America is dedicated—a cause that champions the rights of small nations to work out their own destinies without external interference. This is reminiscent of President Wilson's plea just 40 years ago for the self-determination of peoples and of President Roosevelt's similar point in the Atlantic Charter of 1941.

But, while conceding that each nation has a right to make any change—in fact, he said that "change is indeed the law of life and of progress"—Mr. Eisenhower declared that this carries with it an obligation to bring about change in peaceful ways. The President insisted that, above all else, there must be "an end to external interference in the internal affairs of the Arab states of the Near East."

Mr. Eisenhower realized that merely to set forth the requirements of the U. N. Charter that members refrain from interfering through indirect aggression or otherwise with the independence of other member states was not enough. He called for the setting up of U. N. machinery to police troubled areas, and he offered a program of economic cooperation based not alone on American support but on the contributions in the internal affairs of the Arab States themselves.

The speech was carefully designed to express agreement with the legitimate aspirations of Arab nationalism, but at the same time it was unmistakably directed at the major threat to world peace today—the dictatorship in the Soviet Union which seeks to dominate smaller nations and stir up trouble between them. The President's pointed reference to the damage done by inflammatory broadcasts was an example of what realistically is causing crisis after crisis in the Near East.

Obviously, the plan for economic development of the Near East by means of a regional arrangement is a response to those who have all along insisted that money is needed to assist the peoples of the Arab world to develop their resources and improve their standard of living. America's promise to help is significant. If taken only on its face value, it would aid immeasurably in relaxing tension and bringing peace to the Near East. Implemented further by international conferences, it could prove to be of transcendent importance in world history.

But when Mr. Eisenhower sat down amid the applause of the free world's representatives, Soviet intransigence came back into the picture at once. The Soviet Union's Foreign Minister was almost immediately on his feet to repeat the same familiar cries about aggression and exploitation by the West.

The Eisenhower address is bound eventually to bring second thoughts to all the Arab politicians who have echoed the Kremlin's cries against the presence of American troops in the Near East. Those troops will be withdrawn the moment there is a real basis for peace. The big question now is whether the mischiefmakers in the Kremlin will be content to let the Near East settle down or whether they will continue to keep it stirred up.

President Eisenhower has put on the record America's willingness to go all out to maintain the peace of the Near East. The burden now is on the Arab world and on the strategists in the Kremlin. For public opinion—thinking people everywhere—will endorse what President Eisenhower has said so eloquently and will hope that his plan for peace in the Near East will be supported by the United Nations General Assembly.

Your Congressman Comments

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by Representative USHER L. BURDICK, of North Dakota.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

YOUR CONGRESSMAN COMMENTS ON SECRET TREATIES

(By USHER L. BURDICK)

WILLISTON, N. DAK.—The following item has been carried in the daily press of the country, and there is no doubt it is true:

"UNITED STATES STRENGTHENS BAGHDAD PACT TIES UNDER NEW COMMITMENTS

"LONDON.—Secretary of State Dulles Monday night committed the United States to defense of Iran, Turkey, and Pakistan as a virtual partner in the Baghdad Pact.

"The pact is being realined to take into account the apparent loss of Iraq.

"Dulles signed up after twice talking with President Eisenhower in Washington by telephone. American backing was thus pledged for security of western-allied Moslem nations on or near the Soviet southern frontiers. Automatically, the United States became more deeply involved in the Middle East than ever before.

"Without technically joining the pact, the United States virtually became a member through the new obligations undertaken in declaration that Dulles signed with leaders of the four active members—Iran, Turkey, Pakistan, and Britain.

"With this dramatic stroke, the United States immensely increased the strength and power of the alliance weakened so badly after the violent overthrow of the prowestern Royal Government of Iraq, the fifth member.

"Iraq was not represented at the Baghdad Pact council meeting. The late King Faisal's government had been the lone Arab keystone of the pact designed, among other things, to bar communism from the Middle East. His capital city of Baghdad originally gave the alliance its name.

"A spokesman for Britain said: 'We greatly welcome the strengthening of American ties with members of the Baghdad Pact organization.' The declaration provides that the United States will promptly enter into two-way agreements with Iran, Pakistan, Turkey, and Britain. The document expressed determination of the signers 'to maintain their collective security and to resist aggression—direct or indirect'.

"Some Western statesmen have accused the Soviet Union of indirectly bringing about unrest and revolution in the Middle East and threatening other nations in adjacent areas.

"The countries signing the declaration took under consideration whether substantial alterations should be made in the Baghdad pact and its organization. This means that they are not completely sure what the new Iraq Government is going to do. They feel there may be a bare chance that Iraq will continue its membership."

Regardless of whether or not we should have signed up the name of this Government binding us further into the Baghdad Pact, the dangerous thing is that we allow the Secretary of State to sign such documents. No one in the United States knows about what is to be signed except the executive department, and to allow one department to bind this country to a contract that may, or possibly will, involve us in war is not protecting this Government through the representatives of the people. Congress has nothing to say, and doesn't even know what is in the mind of the executive department.

The result of executive action like this might well amount to a declaration of war without the consent or knowledge of the Congress, for if we have pledged this Government to go to the assistance of any country, then if that country is attacked, we are in a war.

During the Democratic administrations of Roosevelt and Truman, many commitments were made without the consent of Congress, and now the Republican administration is following the same course. No Congressman, nor anybody else outside the executive department, knows how many contracts we have signed and propose to sign. These contracts or treaties have the force of law, and it appears to me that Congress is not needed in dealing with foreign government, according to the ideas of those who make the agreements. The only safe way to handle matters of this kind is to submit the treaty to Congress before it is signed. Any other course may involve us in war without the people knowing a thing about it. If there is a good reason for us to enter into such a contract a patriotic Congress will know it, and we can envision that many of these treaties would not be made.

The executive department handles these matters in a secret way and gets away with it because any information about a treaty before it is signed is marked "secret information," and that is as far as we can go in finding out what is in the wind. It would be interesting to the people of this country to know how many of these secret treaties are in existence today, and to what extent they bind the United States to support them.

Dealing with foreign countries is a live issue today, and the Congress of the United States should have at least some slight information about making contracts that may involve us in a war. This last contract with

the Baghdad Pact countries has all the earmarks of danger to this Nation, but the Secretary of State signs them as easily as a debtor renews a note.

The Problem of Inflation

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. BENNETT. Mr. President, an excellent editorial was published recently in the Salt Lake City Deseret News and Telegram, dated dated August 5. That paper urged the Government to "turn the corner now away from business-stimulating, inflationary devices." Because of the urgency of the message, and since it relates so directly to my recent speeches on the inflation problem, and to other speeches during the past week by my colleagues, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

The paper's suggestion that margin requirements be raised was very timely. The editorial was published the day the Federal Reserve announced the increase to 70 percent.

Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "More Inflation Ahead?" written by Henry Hazlitt and published in Newsweek of August 18, 1958; and an editorial entitled "Flight From the Dollar," published in the Wall Street Journal of August 13, 1958.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Salt Lake City Deseret News and Telegram of August 5, 1958]

ACT NOW TO SLOW INFLATION'S SWING

Kennecott Copper's swing back to a 5-day week this week is, of course, good news to tens of thousands of workers and their families and the businessmen who depend on their patronage. It is also one of many encouraging signs of a significant business upturn this fall.

But these signs also represent something else. They should sound a warning to Government to turn the corner now away from business-stimulating, inflationary devices.

Unless we do, we may be in for another inflationary spiral that will dwarf any of the others since World War II. And inflation, in the long run, is a deadlier threat to this country than business slowdowns.

Signs of an upturn can be seen on almost every hand.

The Kennecott work step-up is one. The company had been on a 4-day week since April. In addition, nearly 1,500 employees had been laid off entirely. The news that sales have risen sufficiently to justify a swing back toward normal operations is tremendously heartening.

Even more encouraging are the signs in the construction industry. Total dollar volume of new construction for the first 7 months of this year is even higher than the booming first half of 1957. July 1957, was the highest month on record up to that time, July 1958, was 3 percent higher. But one note of caution: The boom has stemmed largely from vast Government spending for highways, public housing, and armed services construction.

The stock market is another indication. It has now regained more than four-fifths of the ground it lost in the sharp declines of late last summer. But here again, danger signals are in order. The major pressure boosting the stock market seems to come unquestionably from the expectation of inflation. Present selling prices for stocks are 30 to 40 times their current annual earnings, which is far out of line. Some of the customer confidence is due, of course, to the expectation of good, solid future earnings, but more of it seems mainly a hedge against further inflation.

And then there are other signs. Industrial production has begun to rise. So has steel production. Farm income continues to rise. Personal income is higher than ever. So are Federal expenditures. All tend to boost and stimulate the economy.

But what will be the result? Inflation seems a certainty; the only question is how much. Last week the major steel companies boosted their prices $4.25–$4.50 a ton. Aluminum went up 7/10ths of a cent a pound. Costs in industries using these products—and, it might almost be asked, what industries do not?—are certain to rise accordingly.

Meanwhile, Government spending will be running around $12 billion in the red next year, the greatest peacetime deficit, by far, in the Nation's history. The deficit will be almost wholly inflationary.

So what does all this mean? For one thing, that President Eisenhower was fully justified in vetoing a $6.5 billion appropriations bill full of otherwise sound projects, because Congress had added to it $500 million for the civil service retirement fund. "No sound justification" can be found, he said, "for adding unnecessarily over half a billion dollars to a deficit which may reach $12 billion this year."

This veto kills the $11.7 million appropriation for Salt Lake City's new Federal building, which is unfortunate. But good government and economy are not just for the other fellow. We applaud the veto, for now if ever is the time for the most stringent efforts to squeeze out every ounce of fat from every budget in the interest of minimizing inflation. If the appropriations bill can be pushed through these closing days of Congress without the objectionable feature, well and good. If not, it is still better to delay a bit rather than to accept unbridled spending at this critical time.

Moreover, now is the time for the administration to consider carefully reinstating some of the inflation-control measures that were removed to stimulate the economy. Margin requirements on stock purchases might be a good place to start. Credit restrictions might be considered next.

We do not suggest that the economic brakes be put on full just now. But what we must do is to stop the long swings of the pendulum from boom to recession, and the best way to do that is to act before the swing gets fully into motion.

[From Newsweek of August 18, 1958]

MORE INFLATION AHEAD?

(By Henry Hazlitt)

The signs are becoming unmistakable that the recent rise in the stock market is more a reflection of the belief in further inflation (i. e., in a further shrinkage in the dollar) than a reflection of business recovery.

Certainly stock prices are not reflecting current earnings reports. The First National City Bank of New York reports that net profits after taxes of 809 corporations in the first half of this year were 30 percent under those for the corresponding period last year. The automobile industry suffered a 56-percent drop in profits; the railroads, a 61-percent drop.

No one would suspect anything about this by looking at the recent stock market. The Dow-Jones industrial average went up from 420 on October 22 last year to 513 on August 8. This has created some surprising relationships between prices of stocks and the earnings and dividends of the companies. Barron's, the financial weekly, has pointed out that the stocks in the Dow-Jones industrial average as of August 1, were selling at a rate of about 17.3 percent of net earnings. This is higher than any earnings multiplier rate in the entire 1949–1957 upswing. And the New York Times has called attention to some extraordinary examples, such as Universal Cyclops Steel selling at 100 times its current annual earnings rate, and Crucible Steel at 110 times.

STOCK AGAINST BOND YIELDS

No less significant is the relationship recently established between the dividend yield of stocks and the interest yield of bonds. Normally the yield on common stocks, because of higher risk and uncertainty, is substantially above the yield on high-grade bonds. But as of July 30 the yield on Standard & Poor's index of 500 common stocks was 3.87 percent, or only 0.13 percentage point above the 3.742 percent yield on its A1-plus bond average. This is the closest the two yields have come together since July 1957, when for a short time stocks were actually yielding less than A1-plus bonds. It was the first time this had happened in more than 20 years.

This situation is usually thought to be paradoxical. In fact, the near-approach of the yields on common shares and bonds is often followed either by a fall in the price of common shares or a rise in the price of bonds. But there is one situation in which the convergence or crossing of stock yields and bond yields is a logical response. This is when investors and speculators believe that still further monetary inflation is threatened. In that case stocks are valued abnormally high in relation to current earnings or dividends. Bonds, on the other hand, are valued abnormally low, because the purchasing power of the principal is expected to decline, and lenders insist on a higher interest rate as an insurance premium against this.

EVER-MOUNTING DEBT

If there is a fear of further depreciation of the dollar, the blame rests squarely in Washington. Congress and the administration, between them, are responsible for the prospect of a $12 billion deficit in the current fiscal year. Even if we admit that the Federal Reserve authorities either can or should try to stabilize the economy, they made an extravagant overresponse to a mild recession, slashing the rediscount rate from 3½ to 1¾ percent, reducing required reserves of member banks, and engaging in massive support-buying of Government securities. Whatever the immediate effects may be of the restoration of stock-margin requirements from 50 percent to 70 percent, it is unsound and ultimately futile to encourage a general inflationary flood and then try to dam off its effects in 1 or 2 directions.

And now the Treasury wants a further $8 billion boost in the national-debt ceiling to $288 billion. It is time to ask some blunt questions of Congress and the administration. Do you ever expect the debt to be paid off? Do you ever intend even to reduce it? If so, at what rate? Under what conditions? Are the conditions likely to be realized? Do you intend to pay off either principal or interest in dollars of even present (48 cent) purchasing power, or do you mean to keep short-changing the Government's creditors by further depreciation?

President Eisenhower has expressed great concern which, however, must still be translated into policy.

[From the Wall Street Journal of August 13, 1958]

FLIGHT FROM THE DOLLAR

One of the more puzzling things around Wall Street these days has been the sharp upward march of the stock market in the face of lower earnings, reduced and sometimes omitted dividends. And as brokers, economists and other commentators seek an explanation, we hear more and more often a very ominous phrase.

A few examples will illustrate many. The E. F. Hutton Co., thinks the rising stock market and declining bond market underscore the flight from the dollar. Reynolds & Co comments that last week the flight from the dollar, which has been gathering momentum in recent weeks, turned into a stampede."

The same note is struck across the country. Wayne Hummer & Co., of Chicago, observes that the answer can be that investors have more confidence in the future value of stocks than they have in the dollar's stability. And the market comment of Daniel Reeves & Co., of Beverly Hills is both pointed and poignant: "It is sad but true that few people any longer believe that our currency can ever be worth more in terms of buying power and most likely will ultimately be worth considerably less."

Now admittedly many market comments are not necessarily compendiums of wisdom. Still, brokerage houses are by the nature of their business close to people who are concerned about how to manage their savings for an uncertain future. And when they note, with so much unanimity, such a strong feeling of fear about the dollar then it is surely time to pay attention.

In this instance, too, the feeling is confirmed by the figures on what people are doing. The bond market, including the market for obligations of the United States Government, has been depressed. Plainly the generality of people do not want to lend money to their government. They know the government will pay them back dollar for dollar with interest. What they fear is that they will be paid back with eroded dollars.

Moreover, the economic figures from Washington suggest that the people's fears are not unfounded.

The already huge Government debt is again being lifted; the deficit this year alone will be $12 billion or more. Getting the money for this deficit would be a terrible problem anytime. With a country already inflation conscious, it is almost an insurmountable problem. The Treasury is very likely to find that it can borrow little, or nothing, from the public savings; it may well have to turn to the Federal Reserve to create all the necessary credit dollars in the banking system. And almost everyone knows nowadays that this is just a fancy way of printing money.

Finally—and this is the saddest part of all—the political facts of Washington suggest that nobody is going to do anything about it. The President warns sternly about the dangers of inflation, and approves a budget that can only make more inflation. Congressmen talk sorrowfully about the terrible things that inflation does to people, particularly the little people, and casually build the budget bigger.

The basic problem of inflation is not new. But what is suggested by these scattered and independent market reports is that the people may be developing a new attitude toward it. There is a strong suggestion that people generally are beginning to abandon hope that those appointed to manage their Government will halt inflation, an implication that the country may come to accept the rotting of the dollar as being as inevitable as death and taxes.

And that is why we think Washington had better heed the ominous tone in these reports. For though this country has suffered from its past inflations, all those troubles will be as nothing to what we shall have to bear if the people, privately and quietly, once get it into their minds that they can no longer put any trust for the future in the dollars of the United States.

The Voice of Radio Cairo: What It Means to the World

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. WILEY. Mr. President, I have repeatedly pointed out that what President Nasser says, and what Radio Cairo says, are often two entirely different things.

The head of the United Arab Republic may, for purposes of expediency, issue sirupy words to the West in order that he can consolidate his gains.

Meanwhile, Radio Cairo beams, night and day, in 23 languages, and uninterrupted stream of hatred against the United States and other western powers.

Moreover, the most powerful single propaganda transmitters of the Middle East continue to demand the assassination of prowestern leaders in Arab countries.

I ask my colleagues: What can we expect of a government which speaks with one voice to us, through diplomatic channels, and with another voice against us through propaganda attacks?

And what do we expect will happen in the Middle East if these appeals for assassinations continue? How much stability can we expect there?

If United States troops leave Lebanon, and British troops leave Jordan, what is to prevent Radio Cairo from redoubling its appeals for the immediate murdering of prowestern leaders?

These are questions whose answers we had better think over very carefully.

Mr. President, during the last few days there has been a great deal of comment about the message the President of the United States delivered before the General Assembly of the United Nations. It was a wonderful message, and was wonderfully delivered. However, we must realize that an agreement or treaty with a nation which does not keep agreements or treaties would be worthless. The Kaiser said an international treaty was but a scrap of paper. Today, the philosophy found in the Mideast and in the Kremlin demonstrates that that attitude still exists in the world, at least in those areas. So we must not permit ourselves to be lulled into a state of complacency by syrupy words of either the Kremlin, Nasser, or anyone else. The stake involved is so great that we must not subject ourselves to that danger. If the United States were to step out of that picture and if the Kremlin were to be successful in egging Nasser to step in, what would the situation be? Then there would be a fire which would have to be put out. Would it lead into a third world war?

So, Mr. President, it is obvious that we cannot permit our eyes to be blinded to what will occur tomorrow if today we act like children.

Therefore, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cairo Radio: It Promotes Nasserism With Lies, Hate, and Obscenity," which was published yesterday in the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of August 14, 1958]

CAIRO RADIO: IT PROMOTES NASSERISM WITH LIES, HATE, AND OBSCENITY

(By Ray Vicker)

CAIRO.—"Hypocrites. Vice lords. Degenerates."

These are only a few of the milder epithets being used to describe Americans by Cairo Radio, the most potent propaganda tool now operating in the Middle East.

President Eisenhower yesterday put the spotlight on the Egyptian station in his address before the United Nations. He didn't call it by name—but none listening to him doubted what he was talking about when he declared inflammatory "radio broadcasts directed across national frontiers in the troubled Near East" were a form of "indirect aggression."

A few weeks ago Cairo Radio's strident voice called for uprisings in Iraq and Lebanon. Today it cries for a revolution in Jordan.

"Kill the dwarf King Hussein"—that is the theme of program after program beamed to the troubled Kingdom of Jordan. The assassin would be a hero acclaimed by the entire Arab world, station announcers declare with fervor.

FACTOR IN TROUBLES

And from its powerful Czech-built transmitters in the Nile Delta, this station is beaming a steady stream of anti-American, antiwestern propaganda in 23 languages to most of the world. Diplomats and government officials in the Middle East rate its virulent stream of abuse as a prime factor in recent disturbances in this area. Nationalist Arabs in a dozen countries listen to its voice for cues to new action.

Cairo Radio's 600,000- to 1,000,000-kilowatt capacity transmitters override every other station in the area. America's Voice of America, broadcasting its Congress-muted weak signal from a penny-pinched ship anchored in Rhodes harbor, is drowned out by the din of Cairo Radio and its Voice of the Arabs programs.

And the station presents America to the Arab world as a venal nation of colonialists. Mohammad Sahaf, commentator on a recent afternoon broadcast, said, "Since the end of World War II the policy of the American Government turned against all liberation movements in all parts of the world, fighting against the free leaders of oppressed nations and killing those who showed a tendency of being a headache to the plans of American imperialism."

Mohammad Abdel Kader described the United States as being "made of the refuse of all nations of the world molded together into a solid mass of crime and graft and corruption."

He describes United States Middle Eastern policy as "the policy of political prostitution and vagrancy of those gathered in America from the scum of the earth."

WARPED MENTALITY

Earthy obscenities flavor the rest of the broadcast. Secretary of State Dulles is described by another announcer thusly: "The man is crazy and has a warped mentality."

The announcer ended his broadcast by saying: "We warn you, Mr. Dulles, to lay off Arab nationalism before it proves to be the death of you and your like, you hypocrite."

Most broadcasts involving America contain so many obscenities that squeamish monitors won't repeat exact phraseology.

Headquarters of Cairo Radio is in the heart of this hot, sunny city at 4 Sharia El Cherifeen, a narrow lane between a canyon of buildings. Policy for the station is decided by President Nasser and his top lieutenants.

A policeman in a white uniform stands with a rifle before the entrance of the block, six-story, gray stone building which resembles a medieval Italian castle. The policeman steps forward, then hesitates as you nod nonchalantly to him.

Inside the drab halls people scurry back and forth between high vaulted offices. You remember the comment of one western intelligence officer:

"The station employs hundreds of people, literally hundreds, and it must cost a small fortune to operate."

A stair leads upward. On one floor the landing opens into a hall where a group of radio supervisors are drafting a program. Each has a script and each has some suggestion to make in Arabic. The chorus of voices seems to make little sense.

A youth thaws somewhat and explains that the radio supervisors are mapping a program to be beamed later that day to Lebanon.

What should the tone be? Violent? Friendly? Who should the program try to reach? What should be the theme? These questions are threshed out at "brainstorming sessions." After agreement, the outline is given to a team of writers and a script is written. Officials clear the script and it is then given to the production team with the scheduling.

There is nothing haphazard about the abuse which flows through this station. Economists, folksong writers, politicians, historians, anthropologists, and radio technicians all join hands in carefully planning each part of the program for maximum effect.

Each program is preceded by long studies. Included are studies of the customs of each people to whom a broadcast will be beamed. Attention is paid to the time they sleep and awake, the time they start and end work and the average time-distance between work and home. This helps decide the time the program will be beamed.

Other studies delve into the political position of the country, its economy, the type of government and major problems occupying the attention of the people. This information decides the content of the program.

More studies go into the literacy rate of the people involved, their method of expressing themselves, their idioms, and their intonations. This helps set the tone of the presentation.

Cairo Radio not only broadcasts news bulletins and commentaries, it also presents to each people their popular songs and music. The lonely Kurd in northern Iraq hears Cairo Radio's messages interlarded with wild tunes of the Upper Tigris Valley. The Sudanese hears the savage drum beat of his native dances along with the political pitch to join Egypt.

Each program is presented by a native of the country to which the message is beamed, assuring that all idioms and methods of presentation will be authentic to listeners.

SOMALI, SWAHILI

Programs last from 15 minutes to 2 hours as a rule. Languages include: Indonesian, Malayan, Bengali, English, Kurdi, Turkish, Iranian, Sudanese dialects, Swahili, Amheric, Somali, French, German, Portuguese, Spanish, and Hebrew. As many as seven programs broadcast simultaneously over different bands. A total of 62 hours of propaganda daily is now being fed to people in the Middle East, South and Southeast Asia, and Africa.

Of the 7 programs identified with Cairo Radio, 4 are especially important. These are the general program, Voice of the Arabs, which specifically aims at promoting Arab nationalism, the Sudanese program which tries to sell Sudan on the idea of unifying itself with Egypt, and the beamed broadcasts. The latter may be directed at any country where Egypt thinks it has something to gain by spreading its messages.

Not content with carrying the torch of Arab nationalism, the station also beams broadcasts to the Belgian Congo lashing at Belgian paternalism in its native policy; at Kenya urging natives to rise again against British colonialism; at French West Africa selling natives the idea of working together with their Moslem brothers in Egypt.

Especially virulent messages to Africa are reserved for the Voice of Free Africa. This is a station operated from an unidentified location in southern Egypt by Egyptian intelligence. The government maintains a myth about this being a clandestine station but it is an open secret who runs it.

WESTERN COUNTER MEASURE

Egyptian officials claim that Cairo Radio is being operated merely as a counter measure against anti-Egyptian propaganda. The government claims that eight clandestine radio stations are now beaming anti-Nasser propaganda into the Middle East each day. There were nine such stations until last month when the Voice of Iraq was stilled by the revolution. Says an Egyptian Government official: "We have reasons to believe one or more of those stations are on Cyprus, another in France, one in Israel, and at least one in Turkey. They are constantly subjecting us to vilification and abuse."

No doubt Western powers would be only too happy to silence their clandestine stations if Cairo Radio could also be silenced. Their stations seem to be running poor seconds behind Egypt's when it comes to effectiveness of propaganda.

"The only way a small country can attack a big one is to yell like hell," says one European diplomat. "Egypt is not going to quit yelling through Cairo Radio unless forced to do so, for when you come right down to it this is her best weapon."

Twentieth Anniversary of the Southwest Rural Electric Association

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. LANGER. Mr. President, one of the greatest movements on behalf of the farmers and rural people of the United States was the rural electrification program which was inaugurated in the 1930's. I know that the rural electrification program in North Dakota has been a blessing to the farmers, their wives and their children and the rural people of my great State of North Dakota.

I have spoken many times on the floor of the Senate of the great strides made by our people because of REA.

I notice the Tipton Tribune, Tipton, Okla., August 7, 1958, issue, there is an item which states:

Economists who have made exhaustive studies of the matter say that for each dollar spent by a rural electric cooperative to build its distribution system, more than $4 is spent by co-op members for wiring and appliances. Some economists place the figure at $5.

The article says that rural electric cooperatives bolster United States economy.

I ask unanimous consent that there be printed in the RECORD at this point two clippings from the Tipton Tribune of August 7, 1958, which deal with the 20th anniversary of growth of the Southwest Rural Electric Association which services southwestern Oklahoma and northern section of Texas. I am happy to note that the rural electrification program progresses in all parts of the United States where it has been instituted.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SOUTHWEST RURAL ELECTRIC MARKS 20-YEAR GROWTH

Celebrating 20 years of progress in bringing electricity to the rural areas of nine counties in Oklahoma and Texas, the Southwest Rural Electric Association will hold its 21st annual membership meeting in the Tipton city park Tuesday, August 12.

With more than 2,000 members and visitors expected to be on hand for the annual event, an interesting program will feature the Willie Wirehand Serenaders of KOCO–TV, at Enid; short talks by Roscoe Keiffer, widely known rural electrification leader, and E. E. Karns, manager of Western Farmers Electric Cooperative of Anadarko.

Keiffer, a long-time farmer of Helena, Okla., is now serving his fourth term as president of the State Association of Rural Electric Cooperatives. He has a broad understanding of the problems facing rural people today.

Karns, an authority on power generation and transmission, held a responsible position with the Rural Electrification Administration in Washington, D. C., before coming to the cooperative at Anadarko.

A brief talk will also be given by Betty Fern McGee, 16, a Southside 4–H Club youth with one of the most outstanding records of achievement in the State. She was the State winner in the cooperative speech contests in 1957 and was also the winner in the county speech contests, 1954 to 1958.

The Willie Wirehand Serenaders, sponsored on television Monday through Friday of each week by a number of rural electric cooperatives of the State, are one of the Southwest's most popular musical groups. They will present their wide repertoire of western, popular, novelty, and religious music.

As usual, a feature of the annual parley will be the drawing for attendance prizes, all of which are useful electrical appliances. Winner of the grand prize will have his choice of a television set, home freezer, refrigerator, 1-ton air conditioner, or electric range.

Also, a brief business session will offer reports on the condition of the cooperative as a financial and business enterprise.

There will be free swimming in the Tipton pool for children of all visitors. The pool will be supervised.

The Southwest Rural Electric Association provides electric service to all or part of 4 counties in Oklahoma and 5 Texas counties. The vast network of the co-op's lines reach into Tillman, Jackson, Grees, and Kiowa Counties in Oklahoma, and Wichita, Wilbarger, Hardeman, Foard, and Archer Counties in Texas.

The annual payroll of the cooperative, over $100,000, helps bolster the economy of the community in which it is headquartered. Twenty-five employees of the cooperative live in Tipton and 21 of these own their own homes here.

"The bulk of the cooperative's payroll is spent right here in Tipton," J. M. Maddox, manager, says. "In addition, the cooperative spent $23,511 with Tipton merchants last year for supplies, materials, and services."

Reviewing the progress Southwest Rural Electric Association has made since its inception 20 years ago, Maddox points out that when the first line was energized December 13, 1938, slightly more than 300 rural families in Jackson and Tillman Counties began receiving electric service for the first time.

This event marked the beginning of the rural electrification program in the area now served by the consumer-owned REA-sponsored electric cooperative.

It was just a small par.—that first line of only 162 miles—of the vast network of distribution lines now totaling more than 2,400 miles and serving more than 5,400 residential, farm, and industrial customers and organizations.

"The rural electrification program was just slightly over 2 years of age at that time," Maddox points out. "It was just starting to bring the luxury of city living to the rural areas in the form of electricity at prices which the farmers and rural people could afford to pay."

To the more than 300 rural families of Tillman and Jackson Counties, getting electricity meant getting electric lights. But as the years passed, and they learned of the many other conveniences and labor-saving devices which electricity could provide for them, a great many expanded their use of electric service.

Today, a large number of the rural and farm homes served by the Southwest Rural Electric Association have acquired electric refrigerators, home freezers, electric washing machines, electric ranges, attic fans, electric water systems, irons, radios, television sets, roasters, and many others. Many have installed all-electric kitchens, air conditioning, electric milkers, electric-powereed farm machine shops, incubators, brooders, and other types of electrically powered farm equipment.

At the present time it is estimated that there are more than 400 ways to put electricity to practical use on the farm and in the home.

All these things have contributed to the steady rate of growth of Southwest Rural Electric Association.

As to the future outlook for the cooperative's growth, J. M. Maddox has this to say: "We hope to continue our steady progress by adding new members from time to time, and to educate our membership to a greater use of electricity in their everyday work and living. At this time we are preparing to launch a campaign to promote a better understanding of the advantages of electric heating in the home, its safety features, its cleanliness, and its numerous other conveniences. Today's rural family can have all the modern conveniences of the city and still enjoy the advantages which the open country provides."

RURAL ELECTRIC CO-OPS BOLSTER UNITED STATES ECONOMY

Economists who have made exhaustive studies of the matter say that for each dollar spent by a rural electric cooperative to build its distribution system, more than $4 is spent by co-op members for wiring and appliances. Some economists place the figure at $5.

Conservatively, this means that more than $14 million has been channeled into the economy of Southwest Rural Electric Association's service area during the co-op's 20 years of operation that would not otherwise have been put there.

The cooperative has spent $3,483,000 building its distribution system and for system improvements.

TWO EMPLOYEES OF SOUTHWEST REA ARE LANDMARKS HERE

Two employees of Southwest Rural Electric Association of Tipton are virtual landmarks of the history of progress of the organization. They are Homer Shotts, line superintendent, and C. M. Shelton, work order clerk and dispatcher.

The work these two men did in launching the cooperative project predates the cooperative itself for they were engaged in taking member application and securing easements for the construction of the initial lines.

Recalling those early days of the program, the men say that most farm people they called on were willing enough to pay the $5 application fee but they did not believe anything would ever come of it. Shelton and Shotts say that practically all rural people would not believe that they would ever get electricity for their farms and farm homes.

They point out that in that day people thought of electricity only in terms of getting lights for the home. They didn't realize at that time the many uses electricity could be put to on the farm to take the drudgery out of rural living.

"These men are excellent employees," J. M. Maddox, manager, says. "It is worth a great deal to have employees with the background knowledge of the system that these two men have. It makes them very valuable."

The World's Political Illness

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article by Constantine Brown entitled "The World's Political Illness," which appeared in the Evening Star, Washington, D. C., on Thursday, August 14, 1958.

I think this article calls for the attention of the public in general and my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORLD'S POLITICAL ILLNESS—POLITICAL OFFENSIVE AGAINST RED VIRUS SEEN ONLY CURE IN DULLES' VIEW

(By Constantine Brown)

Secretary John Foster Dulles and a few realists in the State Department are diagnosing the ills of the world as "political." The virus which besets every nation is produced by international communism; the only possible cure suggested for some years by our Secretary of State is a strong political offensive against direct and indirect aggressions prompted by the Kremlin. Most of the "consultants," particularly from congressional ranks, are taking issue and declare the ailment is "economic." They recommend large doses of American dollars and substance as the only possible treatment.

Mr. Dulles, in his discussions with the congressional "consultants," pointed out that whenever this country and her associates adopted what used to be called in medicine "heroic remedies," the pernicious high fever subsided and the patient improved. There are many examples of this treatment: The Truman doctrine, which stopped the Soviet advances in the Middle East in 1947 in their tracks; the Berlin blockade; the aggression against the Republic of Korea and, very recently, the response to the requests of the heads of governments of Lebanon and Jordan to land troops and thus stem the Communist tide.

It is unfortunate that the last three operations have not been pushed to their logical conclusion: Complete success. In Korea, we bowed before the fear of our allies that pushing ahead with our military forces would involve us in another world war. Under the impact of some of the allies who had sent small forces to the Korean battlefields we accepted first a ceasefire and later actually signed an armistice at a time when our commanders in the field felt certain that they could push the enemy across the Yalu with fewer losses than we had suffered during the ceasefire period.

The military promenade in Lebanon appears to have been of little assistance. It was a mere shot in the arm, with only very temporary effect, because the free world decided to let the illness run its course in Iraq. There are many here and in London who maintain that had the Turks, for instance, been asked (and provided with the much-needed gasoline for their tanks and airplanes) to move into Iraq, the rest of the still loyal army would have rallied around the legitimate successor of the murdered King Faisal. The coup so cleverly engineered by Moscow by way of Cairo could have boomeranged.

As things stand now, politically, it is only a question of time before the King of Jordan is either ousted or assassinated, while the real ruler of Saudi Arabia, Crown Prince Faisal, is expected to accept Nasser domination. The other Arab princelings who control vast resources without which the NATO and particularly Britain claim they cannot survive, unquestionably will join Colonel Nasser.

The inevitable nationalization of the oil resources is unimportant. Few people bother about the fact that the oil companies may make smaller profits. What is important is that once the Arab empire is established under the president of the UAR, the oil resources will be controlled politically by the Soviet Union. Only those countries which accept the Moscow standard of coexistence will be supplied.

This is the analysis of the political X-ray pictures which Mr. Dulles has carefully examined ever since he took office. There is no question that economic aid is necessary in certain areas to lessen the fever. But economic help alone as advocated by the many consultants inside and outside the government has proved of little or no help.

The belief that communism thrives in countries where poverty is rampant is belied by the facts. Those who have traveled, like this reporter, in areas where people lead a substandard way of life realize that hardship does not produce communism or a desire to join the Communist system. People

in South Korea, Formosa, Vietnam, and Turkey—to mention only those I have visited recently—have barely enough to eat, and live, if they are lucky, in hovels. Yet they are all determined to fight and defeat communism.

The same thing can be said about the Chinese in Taiwan and the Turks, who in recent years have suffered economically more than ever in their history. Economic assistance and relief are sought by all, but not at the price of surrender to the Red conspiracy.

Crippling of Labor Called Dangerous

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. McNAMARA. Mr. President, writing in the August 11 issue of the Chicago Daily News, Columnist Harry Barnard points out that the blackening of the American labor movement because of the actions of a few is not only unjust but dangerous to our democracy.

Mr. Barnard, by the way, is author of the book Independent Man, a biography of the late Senator James Couzens, a former distinguished Member of this body from the State of Michigan.

I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRIPPLING OF LABOR CALLED DANGEROUS

(By Harry Barnard)

So much ink has been used lately for blackening the public image of labor unions that using a little here to bring this matter into better focus seems highly desirable.

Labor unions are good. They are necessary for achieving democratic aims for a fair shake for everybody and for as much freedom as orderly society can tolerate. Some of their leaders act hard boiled. But so do many employers.

So long as we operate an economic system on the principle that the profits should go to individuals or private corporations, not to the state, workers need the protections of organization. There is no getting around this fact, unless we want Government to fix wages.

Many businessmen, perhaps most, do keep in mind the welfare of their employees. But so long as any do not, employees must band together to get decent wages and conditions.

Otherwise, the individual worker, usually having no reserves for bargaining power cannot refuse any offer. Otherwise also, even social-minded employers, because of competition, are inevitably forced to lower their wage rates.

These are old truths. But they ought to be kept in mind to offset the anger produced by recent reminders that some unscrupulous men are in labor unions or organizations they call unions, but in fact are extortion schemes.

Anger over this is certainly justified, though none of this is really new. Corrupt men have always operated in the labor movement—just as such persons have always operated in business and in professions.

But they are in the minority.

Some new laws may be desirable. This may be so to the extent that bigger unions, like bigger business, result in new relationships.

Also, the time has come, I think, for unions themselves to drop certain vestigal practices—featherbedding by railroaders, "bogus" typesetting by printers, and the like—which had justification in earlier eras but not today. This along with their own housecleaning of illegal practices.

But I am not unhappy that Congress will not pass new labor legislation this session. It is all to the good that there be a breather for everybody for digesting better the McClellan committee activity, some of it nothing more than sensationalism.

More Government regulation of labor practices means less freedom, not only for labor, but also for industry. This may be unavoidable. But we should not rush along this road.

John L. Lewis, of course, is not unbiased here. However, when this really great labor figure appeared before a Senate committee last year, he made a comment worth emphasizing. "One of our proudest boasts abroad," he said, "is that our unions are free, unlike those of Russia."

This is important.

Neither Mr. Lewis nor I argues that freedom means that racketeers should not be punished—a responsibility, by the way, of local and United States prosecutors.

The racketeers should be run out, but the method should be carefully weighed, with the balance, I think, in favor of the most freedom possible for our unions.

We do not hamstring the entire medical profession because of a few quacks. By the same token, we should be sure we do not cripple the now free American labor movement out of indignation over a few bad eggs in it.

By any test, throughout history, the labor movement has been a major bulwark of democracy. It is that now. This should not be forgotten.

Nor should we forget that extending Federal regulation into this field, even for good purposes, can be the first of several fatal steps toward statism where it would hurt democracy most.

United States Cattle in Latin American Countries

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. YARBOROUGH. Mr. President, one of the great forces in settling the West was the cattleman, and though his importance has been recognized in books and television, opportunities are now present for this country to extend the impact of his achievement to the other parts of the world.

The July issue of the Cattleman has a very informative article on the Latin American cattle industry and the possibilities for American assistance through sharing of our knowledge and the sale of our cattle to these countries. The author of this article, Mr. W. W. Callan, points out that conditions in the Latin American countries vary greatly from those in the United States, but that with study, mutual benefit will result.

The economic challenge in world power is becoming increasingly serious, and adds greatly to the difficulties of our political and military struggle. Mr. Callan suggests one way in which steps may be taken to strengthen our ties with our sister republics in the Latin American States.

Mr. President, I request unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE'S A MARKET FOR OUR CATTLE IN LATIN AMERICAN COUNTRIES

(By W. W. Callan)

So often when we hear someone speak of one of the many countries south of the border, we have only a vague idea of the geography, climate, terrain, or the people involved. Few of us realize that Brazil is 1 of the 4 countries of the world larger than the United States. It is difficult for us sometimes to realize that the Mayan culture of Guatemala is older than anything we know in the United States, or that the lush tropical growths along the coast lines of many of these countries give way to high, cold mountain areas within less than an hour's airplane flight.

So to understand the conditions surrounding the market for cattle in Latin America, we have to understand that any general statements that we make will not apply in many spots.

There are, however, a few general conditions that prevail in most of the Latin American countries, including Mexico, Central America, and in South America that need to be recognized at this point.

COMPLETE ABSENCE OF SELECTIVE BREEDING

The custom of the cattlemen is to allow the bull to grow up without castration, and that 4- to 6-year-old bull meat is quite common and perhaps constitutes the majority of the meat in Latin America. These animals often run with the cow herds indiscriminately. There is complete absence of any plan for selective breeding for better animal production as we know it in the cattle areas of the United States.

It is not uncommon for a 5-year-old bull to be moved from the place where he was born to one of the better coastal plain fattening areas weighing 600 pounds and after 6 months to be sent to market weighing 800 pounds and have the meat from this animal to represent the average or perhaps a little above the average of the meat that is available in many of the Latin American countries.

At this point I hasten to say that there are a few countries where there are a few fine cattlemen who are just as progressive and who take advantage of all the techniques we know for beef production in the United States. These men who are the exception to the rule have fine cattle. They market 3-year-old steers weighing 1,100 pounds, fat off grass with a very desirable quality of meat. Many of these people have cow herds that could go into some of our best cattle areas in the United States and compare favorably with the cow herds now found in those areas.

We should also recognize that the meat in most Latin American countries is cooked and consumed the same day the animal is killed. There is almost a complete absence of refrigeration. Of course, in the major cities again we have an exception and there are refrigeration plants for the meat sold to the elite and some of this meat is of very fine quality and quite flavorful and sometimes very tender.

LITTLE GRAIN FOR LIVESTOCK

There is almost a complete absence of any grain for the cattle throughout Latin America. There is hardly enough corn,

wheat or other grains to feed the human population with a little bit used for poultry farms, leaving nothing in the way of grain for the livestock. So we are talking about animals that have to grow up and build their entire life subsistency on grass and other vegetation, and go to market at a much older age and at a much lower weight than any we are accustomed to thinking of in the cattle areas of the United States.

In many areas there is a rainy season when an average of 10 inches of rain each month for 6 months will occur. At this time there is a lush growth of grass and other vegetation; growth where the nutrients have been washed out of the soil. Little food value is found in the grass of many areas. Cattle may be up to their backs in green grass but be in poor condition and failing to make growth or put on fat except at an extremely slow rate.

As a result in many of the areas, exclusive of the few modern ranches of these countries, the cattle have a tendency to be light framed and of small bone. Animals imported from the United States or other areas are not likely to grow out to the same scale, weight or bone structure animals developed in the better cattle areas of this country. Experience has shown the necessity of recognizing the soil and mineral deficiencies when cattle are selected from importation into most areas or perhaps all of the Latin American countries.

It has been perhaps 50 years that most of the United States has been relatively free of internal and external parasites. Our animals do not have many of the immunities of the native animals to tick fever of one kind or another that is quite common in most of the Latin American countries. There are a few areas where the cattlemen, veterinarians and other advisers have been quite progressive in the treatment of the animals to condition them to withstand the ravages of the parasites.

In the case of the tick fever, a system has been developed to preimmunize the animals before they are turned loose in an area infested with ticks. This treatment has been especially successful in the case of young animals not over 10 months of age in a few of the countries.

I have tried to give a little of the background that is necessary for those who wish to successfully introduce cattle from the United States to Latin America. These problems, while serious, are not insurmountable. If recognized and approached with commonsense and all the knowledge gained by those who have studied the problems in recent years, these problems can be overcome and the animal successfully introduced into Latin America with beneficial results to the cattle now being used.

Also on the positive side of cattle raised in Latin America, there are some interesting situations,

Land in many cases, good land, is readily available to cattlemen of almost all Latin American countries. Foreigners who desire to acquire this land may have either difficulty in acquiring or keeping it.

The manpower to perform the necessary ranching work and the costs of operation are both readily available and low in cost. The cost of bringing a 6-year-old steer from time of birth to sale at the ranch for market is a negligible item as compared with the cost we know in the United States.

There is always a demand for all the beef or other meat products that can be grown in most Latin American countries. Many of the citizens of these countries only rarely secure any meat. The cause of health and nutrition would be greatly assisted if more meat was available for more of the people.

NO PREMIUM ON QUALITY OF MEAT

In many of the countries the governments have rather strict controls over the prices of the live animals and the resale price of the meat. These government regulations, in general, do not recognize any difference between animals in good flesh with some fat and the run-of-the-mill animals that may be in poor flesh and of inferior quality. In other words, a kilo of beef is a stated maximum price regardless of whether the animal from which it was cut would grade by our standards—Choice, Good, or Utility.

In Mexico, the Central American countries, and throughout South America, there are individuals, ranching corporations, Government agricultural and livestock department and others who are aware of all the problems listed here and many more that exist in their own areas, who are successfully importing and exporting breeding livestock; introducing them into their herds and showing real improvement in the resulting animals. These people are practicing the best animal husbandry known to us. They are working toward the marketing of 2- and 3-year-old animals weighing more than those marketed by their neighbors at 6 years of age.

In spite of the governing regulations in many of these countries, the high cost of export and import expenses, money exchange rates and transportation costs, they are continuing year after year to bring in more and better animals and finding it both possible and profitable to do so.

The experiences of many of these people indicate less difficulty when young animals with good growth characteristics and large bones are introduced and carefully managed until they reach maturity. The young animals respond to preimmunization and other adjustments more readily than the older animals in many cases. These young animals, however, require greater nutritional care to reach their maximum growth than would be necessary for us here.

There is a real need for many kinds of livestock, especially cattle to be carefully selected, well prepared, and taken care of in the herds in the various Latin-American countries.

The introduction of inferior animals, failure to properly recognize the health and nutritional problems is certain to result in unsatisfactory experiences and is to be avoided wherever possible.

The Soviet Union's Economic Offensive in Latin America

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD a series of 6 articles and 1 editorial which appeared in the Miami News, prepared by its Latin American editor, Mr. Hal Hendrix and his staff, concerning the success of the Soviet Union's economic offensive in Latin America.

They pointedly describe the scope of the Communist offensive, and the grave threat it poses to the United States. As the Soviets strengthen their toehold in Latin America through a greatly expanded trade program, they will follow it up with massive attempts at political penetration of the entire Western Hemisphere.

For many years I have urged the establishment of a stable, long-range, effective, workable trade program between the United States and Latin America. These articles call for the same action and give new evidence that we must act soon in bringing our Latin American trade policies in line with the demands of the times.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Miami (Fla.) News]

SMALL, BUT GROWING—SOVIET TRADE HITTING LATIN SOFT SPOTS

(Throughout the world the Soviet Union has launched an economic offensive which is considered an entering wedge for later political penetration. The economic campaign has touched parts of Latin America. Several weeks ago, the Miami News has asked its correspondents in Latin America to report on this Soviet offensive and its shape and size. Their reports on this extremely dangerous development follows.)

(By Hal Hendrix)

In the last year, several informed Americans have expressed increasing concern regarding the rising tide of Communist economic influence in the free world.

There is evidence at every turn that the much-heralded Soviet economic offensive has reached into Latin America.

The penetration has been in varying degrees in the 20 Latin republics. Some of the nations have nibbled at the Red bait, some have taken a fairly good-sized bite, some have turned away.

The dollar value of all the Soviet transactions is relatively small. Soviet business in Latin America, for instance, amounted to $131 million in 1956. United States sales in the same year were nearly $4 billion.

UNDERLYING SIGNIFICANCE

Roughly 2 percent of Latin American trade was with the Soviet bloc. Although this is not a large figure, there are at least two reasons for not assuming that it is completely insignificant.

First, Soviet bloc trade with Latin America has been growing about 40 percent a year since 1952.

Considering the very low level from which it started, the net gain still is small. But it points up an intensified economic drive in Latin America.

Second, the Soviet Union is directing its trade offensive primarily to soft spots in Latin America—countries that, because of various economic problems, have experienced difficulty in disposing of their exports at declining world prices.

FRIEND IN NEED

The Soviets are thereby able to make an effective show of helping out nations in trouble. There is no doubt that behind the trade screen the chief purpose is political penetration.

Latin America has been increasingly anxious to find new markets, and the anxiety has grown in recent months due to the depressed free world market in most commodities.

The Latin nations possess some of the raw materials in short supply in the Soviet bloc. They have a large demand for some of the products the bloc has in surplus.

All reports indicate that trade between Russia and its satellites and Latin America will show another gain this year. Red trade missions have been extremely busy in soliciting Latin purchasers and offering to buy Latin products.

TOO LARGE TO IGNORE

If Red trade in the Latin area should increase at the possible rate of 20 percent a year, in 10 years it would amount to about $1 billion. This still would be considerably below the United States volume in Latin

America, but too large for the United States to ignore.

A strong and growing Soviet trade offensive in Latin America presents a serious challenge to the West in general and the United States in particular.

For as the Soviet Union's trade grows in the Western Hemisphere, so does its political penetration and influence.

REDS IN LATIN AMERICA, NO. 2—RIO WOULD DEAL FOR RUSSIAN OIL

(By Herbert Zschech)

RIO DE JANEIRO, August 5.—The Soviet Union's trade offensive has been underway in Brazil several months.

It has been more intense here than in many other Latin nations, and last month obtained its first success when Brazilians said "Yes" in principle to a barter-trade offer.

However, the deal depends on conditions spelled out by Brazil. There has been no indication the Soviets will agree.

Russia offered to supply Brazil with 200,000 tons of crude oil—worth about $9 million—in exchange for coffee, cocoa, and cotton.

NO GATE FOR INFILTRATION

According to reports which have not been denied, Brazil accepted the offer with these two provisions:

1. It should be strictly trade, not involving currency.

2. It should not be a pretext for Russian trade missions, technical missions or similar groups to be sent to Brazil.

Alexander Volkov, a member of Russia's Supreme Soviet, said in Rio yesterday that the time was ripe for Brazil and Russia to renew diplomatic relations, which were severed in 1947.

The Soviet delegate said Russia was in a position to supply Brazil with large quantities of machinery, including oil drilling equipment and nuclear plants with technical assistants.

The recent Russian offer was made through the Soviet Trade Bureau in Montevideo, which is the hub of Soviet South American activities, to the Brazilian Government's oil monopoly, Petrobras. Brazil now imports about $400 million worth of oil annually, mainly from United States firms.

Russian trade specialists earlier submitted a proposal to supply ships in exchange for Brazilian coffee. Brazil rejected the offer, but then accepted a similar deal with Communist Poland for 12 merchant ships.

ALSO WANTS MANGANESE

The Soviets also have expressed interest in buying Brazilian manganese.

Red attempts to extend trade relations lately have been meeting with increasingly favorable reception by Brazilian nationalist groups, including some quarters close to President Juscelino Kubitschek.

The Brazilian Foreign Ministry has been the principal center of defense against these tendencies. It remains to be seen whether the recent resignation of Foreign Minister Macedo Soares will change this attitude.

Opposition deputies in the Brazilian Congress have frequently accused the Government of attempting to blackmail the United States with the Russian trade offers in order to gain financial and commercial advantages in Washington.

REDS IN LATIN AMERICA, NO. 3—MEXICANS COOL TO RUSSIAN BAIT

(By Marion Wilhelm)

MEXICO CITY, August 6.—If Russian officials in Mexico have any trade tricks up their sleeves, and there have been recent indications they do, Mexico is not likely to fall for them.

The Russians broached the trade subject here recently when Deputy Foreign Minister V. V. Kuznetsov, ending a South American tour, made overtures regarding all kinds of heavy industrial machinery, including petroleum rigs—just what the nationalized oil industry needs to speed up exploration and development.

But Petroleos Mexicanos, or Pemex, told the Miami News the Soviets have made no direct offer. If they do, it is known that Pemex would say, "No."

The industry's equipment is almost totally from United States manufacturers and it would not be feasible to switch at this point.

FRIENDLIEST WITH UNITED STATES

Further, the Mexican Government maintains friendliest official relations with Washington and this administration has been outspokenly anti-Communist.

President Adolfo Ruiz Cortines didn't bother to answer a letter received last April from Russia's Khrushchev asking Mexico's support of his unilateral suspension of nuclear tests.

Ruiz Cortines' successor, President-elect Adolfo Lopez Mateos, is expected to continue warm relations with the United States Government and United States businessmen when he takes office in December.

Kuznetsov's statements here nevertheless indicated that there would be some concrete offers made to Mexico's rapidly industrializing economy, presently bounding ahead with the help of United States capital and machinery.

"For example," he said, "the U. S. S. R. could sell petroleum machinery, lathes, highway construction machines, transport equipment. The Soviet, for its part, could be a constant buyer of the traditional export products of Mexico."

PARTY SNUBBED

He added:

"We are disposed to develop economic, cultural, scientific, sports, and other relations with Mexico."

It was interesting that Mexico's Minister of Economy Hilberto Loyo, who bosses foreign commerce, didn't attend the chummy party thrown in the Russian Embassy by Kuznetsov and the Ambassador. He sent an assistant.

Propagandawise the Russian minister's visit was more significant, since he had followed pretty much the betroubled trail taken by the Vice President of the United States, RICHARD NIXON.

"We didn't plan our trip to coincide with Mr. NIXON's," Kuznetsov told the Mexico City press conference, smiling broadly and reminiscent of the jocular Khrushchev.

While Mexico's Government is not likely to promote any trade with Russia, Iron Curtain manufacturers have been silently moving in some products for Mexican sale.

Cameras from Iron Curtain countries, including East Germany, have been on sale here for some time.

The most noticeable stepup in Russia's Mexican offensive has been in magazines and periodicals—some published here, but most brought in from Russia—and books, now on sale at numerous bookstores around Mexico City.

REDS IN LATIN AMERICA, NO. 4—RUSSIA THREAT IN ARGENTINA STILL MOSTLY PALABRAS

(By Herbert M. Clark)

BUENOS AIRES, August 7.—Russia's vaunted trade offensive has been more a matter of propaganda than product recently in Argentina, although it is stealing headlines and building into a potential threat.

Briefly, this is what has happened in recent months:

The Soviet Union has sold a million tons of crude oil and a sizable quantity of rails to Argentina at prices below United States rates.

An Argentine purchasing mission visited Communist bloc countries in January and February and bought $27 million worth of goods, mostly machinery and steel.

ARGUMENTS OVER OIL VALUE

Czechoslovakia has sold Argentina a coal-washing plant for its Rio Turbio deposits.

The most recent fanfare centered on the deal in which Russia agreed to supply Argentina with a million tons of petroleum over the next year. It was front-page news in papers, which did not bother to point out that the agreement would meet barely 10 percent of Argentina's needs for imported fuel.

The Government announced that the Soviet quotation of $2.32 a barrel was less than has been paid in the world market recently, but the pro-Frondizi weekly El Intransigente contended that actually Argentina has been paying only $2.28 and that actually the government has been driven to overspending in an effort to use up commercial credits.

SOVIETS OFFER MACHINERY

The first 400,000 tons of Soviet oil will actually be credited against an existing balance to Argentina's favor in Russia, one which the trade mission sent behind the Iron Curtain was not able to liquidate. The balance will be imported on a barter basis against low-grade wools from the clip which starts next October 1.

Russia has offered road-building machinery and railway and oilfield equipment in a series of negotiations, but none has yet borne fruit as President Frondizi attempts to juggle overwhelming needs against nonexistent means of payment. The president has forecast a $360 million trade deficit for 1958, even with an import freeze applied on May 2 and not yet relaxed.

Iron Curtain trade with Argentina actually has slumped over the past 3 years. In 1955, Russia and its satellites sold $64,170,000 of the total of $1,172,590,000 worth of goods which Argentina bought and took $47,510,000 worth of total Argentine exports of $928,595,000, absorbing 5.2 percent of the country's total foreign trade.

The percentage slipped to 3.6 percent for 1956, and for the first 4 months of 1958—latest figures available—fell to 2.8 percent of the total.

Of total exports of $321,859,000, barely $8,846,000 went behind the Iron Curtain, and only $11,638,000 of total imports of $405,943,000 came from the Soviet bloc.

REDS IN LATIN AMERICA, NO. 5—PERU-RED TRADE LIGHT, BUT SOVIET TRIES TO NIBBLE

(By Donald I. Griffis)

LIMA, August 8.—Peru has not yet really felt the Soviet Union's trade offensive in Latin America.

Trade between Russia and Peru is virtually nonexistent. Imports from Soviet bloc countries, chiefly Czechoslovakia, amounted to only about $1 million last year. The figure is expected to be about the same this year. Exports to all Communist bloc countries amounted to less than $3,000 last year.

SUSCEPTIBLE TO RED TRADE OFFERS

Observers here note, however, that Peru is susceptible to Soviet trade overtures since its foreign-exchange income this year is expected to drop at least $40 million because of the plunge in world prices of the nation's principal exports—lead, zinc, cotton, wool, and sugar.

Left-wing and anti-American elements here have suggested recently that Peru attempt to trade with Russia and its satellite countries. The demands became loud at the time the United States Government was considering increasing duties on lead and zinc imports.

However, little serious thought has been given to Soviet nibbles. The country's governing class is strongly anti-Communist.

At present, Peru's principal imports, with the exception of wheat and beef, are manufactured goods that can be obtained more cheaply and easily from the United States or Western Europe.

RELATIONS WITH RUSSIA NONEXISTENT

Peru never has maintained diplomatic or economic relations with the Soviet Union, despite intense efforts by the Soviets for recognition during World War II.

For a time a Czechoslovakian legation existed in Lima, but the Peruvian Government ordered it closed last year. The Government charged that the legation was serving as an outlet for Communist propaganda.

Three years ago a Yugoslav trade mission visited Peru. But its members never got farther than their hotel. A hooting mob surrounded the place until the mission left.

REDS IN LATIN AMERICA, NO. 7—RUSSIANS RANK FIFTH IN BUYING OF CUBAN SUGAR

(This concluding article on the Soviet economic offensive in Latin America is a roundup of reports from Miami News correspondents—Julio Vielman in Guatemala, Jay Mallin in Cuba, and Victor Hugo Villegas in Bolivia—on the situations in their respective countries.)

(By Hal Hendrix)

In Guatemala, the overthrow of the Communist administration of President Jacobo Arbenz Guzman in mid-1954 established the tone of any relationship between Guatemala and the Soviet Union or any of the Communist-bloc nations.

Any diplomatic, commercial or cultural associations that existed between the Soviets and Guatemala before the 1954 revolution were cut off and have remained severed.

A decree signed June 6, 1954, by the late President Carlos Castillo Armas, forbids all trade between Guatemala and the Soviet Union, Poland, Czechoslovakia, East Germany, Hungary, Communist China, North Korea, and all the other Soviet satellites.

Inquiries among Guatemalan Government officials, businessmen, and foreign-investment promoters disclose no real effort by the Soviets or their puppet nations to aid or trade with Guatemala.

FIFTH AS CUBAN SUGAR BUYER

In Cuba, the world's largest single sugar bowl, trade with the Soviet Union is limited largely to sugar sales. Russia ranks fifth as a purchaser of Cuban sugar.

The United States usually buys slightly more than half of the total Cuban sugar crop. Other big buyers, with purchases ranging between 300,000 and 500,000 tons, are Great Britain, West Germany, and Japan.

As of last May 1, Russia had purchased 187,000 tons of Cuban sugar this year. Total for 1958 is expected to be about 260,000 tons. Last year, purchases amounted to 347,673 tons. This year, for the first time, Red China bought sugar from Cuba—50,000 tons of it.

(The total Cuban crop this year was 5,600,000 tons, worth about $600 million.)

BOLIVIAN REDS MIDDLE MEN

In Bolivia, the Government maintains no commercial relations with the Soviet Union. It has not yet received any formal propositions, either for an exchange of products or for tin and oil exploitation.

However, the Bolivian Communist Party—with the backing of several leftist political parties—recently suggested to President Hernan Siles Zuazo that it would be advisable for Bolivia to enter into trade agreements with the Soviets.

The Bolivian Communists said the Soviet Union might be able to purchase "almost any amount" of Bolivian lead and copper. They also said the Soviets were anxious to offer technical and economic assistance to intensify the country's mining production, on terms more advantageous than those extended by the United States.

OIL AGREEMENT CAUSES ALARM

The recent barter agreement of Russian petroleum for other Argentine products has caused alarm in Bolivia, since Bolivia has been supplying oil to Argentina at the rate of about 120,000 barrels a month. Bolivia has been counting on increased oil exports to help rehabilitate its economy and relieve some of its heavy dependency on tin exports.

To counteract the Soviet economic offensive Bolivia seems likely to increase its tin and oil production and seek to place it in a more favorable and less restricted international market.

This will require increased technical and economic injections. And since Bolivia revolves in the democratic western orbit, attainment of its goals of better quotations and increased demands for its products, depends largely on its neighbors in this sphere of influence.

[From the Miami (Fla.) News of August 12, 1958]

ROUGH STORM ON HORIZON

The continuing threat of the Soviet Union's economic offensive in Latin America, which is in reality the front yard of the United States, should be a matter of serious concern for every citizen of this country. The effort of the Soviet bloc is like the little black cloud on the horizon, with a falling barometer and increasing winds. A rough storm could move in on us.

Last week, correspondents of the Miami News unfolded a series of accounts of just what the Soviets and their satellites are up to on the economic front in Latin America. Their reports, ranging from Mexico southward to Argentina and Chile, all noted that the Communists are aiming at the soft spots in this hemisphere with sugar-coated trade proposals that mask a long-range political penetration program.

The Soviet trade in Latin America still is relatively small in volume compared to the United States-Latin commerce. On the basis of figures alone an unwary observer might well ask: What is all this fuss about? The answer is easy and disturbing. It lies in the intentions and capabilities of the Soviet bloc now and its potentialities in the years immediately ahead.

The Soviet Union and its satellites have reached a point where they can extend long-term credits at interest rates more attractive than those from the United States, buy large quantities of raw materials and export manufactured goods and machinery. They have moved into Latin America at a time of galloping inflation and tumbling commodity prices.

The degree of economic penetration has varied in the Latin nations. Some have resisted stoutly; some have weakened. The danger is clear. It should be clear to this Government that it is foolhardy to keep threatening higher tariffs, and to continue sidestepping the issue of establishing more stable trade policies with our Latin neighbors.

Now that Vice President RICHARD M. NIXON, Dr. Milton Eisenhower, and Secretary of State John Foster Dulles have had recent on-the-spot views of conditions in Latin America, it is hoped that Washington officialdom will take constructive steps to stem the brewing Soviet storm blowing toward our front yard. The United States has certainly had sufficient forewarning.

The Corregidor-Bataan Memorial Commission

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. WILEY. Mr. President, recently it was my privilege to hear a very fine address delivered by Emmet O'Neill, who spoke about the contemplated Corregidor-Bataan Memorial. I believe his speech can be read with profit, because of its bearing upon our foreign policy, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

CORREGIDOR-BATAAN MEMORIAL COMMISSION

(Address by Emmet O'Neill)

Mr. Chairman and members of the committee, the Philippines became a sovereign nation on July 7, 1946. On October 12, 1947, the United States, at a formal ceremony returned to the Philippines the last bit of Philippine soil which had been under its control—the island of Corregidor. At the ceremony on Corregidor, when the American flag was lowered and the Philippine flag raised, the American Ambassador (the present Chairman of this Commission) said in part:

"Today the United States of America conveys to the Republic of the Philippines the last tangible bit of America, the island of Corregidor. It is right that this be done. But in a deeper sense, Bataan and Corregidor do not belong solely to any one country, even to the heroic Philippines. * * * There is more to this hallowed spot than what we here convey, and it is that which belongs to the ages and to all men who believe in human liberty. Nations yet unborn will strive for freedom and receive strength and courage from nearby Bataan. Men now living and yet to be born will carry on inspired by the true meaning of Corregidor. They are now enshrined in the temple of hope for mankind with Runnymede, Valley Forge, and other places where the fires of freedom were lighted and kept burning.

"* * * The blood of Americans and Filipinos mingled, indissolubly in the soil of Battan and Corregidor, each defying the forces of autocracy and slavery. The blood shed by your sons and our sons cannot be separated in the hallowed earth of Bataan and Corregidor. * * * This spot will tell the story to oppressed and groping people how they, too, can attain liberty by devotion to the democratic way of life.

"Bataan and Corregidor will ever be beams to guide liberty-loving people of Asia and of the world to a way of life which will bring the greatest good to the greatest number. May they light the way to freedom for millions who are seeking that which Bataan and Corregidor so sublimely represent."

This was the inception of the Corregidor-Bataan Memorial effort.

Mr. Chairman, some have inquired as to the support of the idea of placing a memorial on Corregidor. Its deep meaning and importance has brought approval and widespread support both in the Philippines and the United States.

President Quezon, during the tragic days of the war stated that Corregidor should be preserved as a memorial.

Every other Philippine President, Rojas, Quirino, Magsaysay, and Garcia have been deeply interested in our efforts to place a memorial on Corregidor and have given it their support. The Government of the Philippines set aside Corregidor to be preserved as a shrine, and created the Philippine National Shrines Commission. It was directed to work with the Corregidor-Bataan Memorial Commission and has done so enthusiastically. It has officially and unanimously expressed its full endorsement of the concept and plans for the construction of the memorial. The members have individually and collectively expressed their unqualified appreciation of the winning design and officially approved it. They have stressed the great desire of the

Filipino public to see the proposed memorial erected soon.

The Honorable Eulogio Balao, when Secretary of Defense, stated: "I hope very soon, we shall see standing on Corregidor a living symbol of the gallant struggle."

The Honorable Carlos Romulo said: "It is for this reason that we in the Philippines are happy to know that the United States Government has created a Corregidor Bataan Memorial Commission and that plans are underway—and we sincerely hope they can be carried out soon—to build a memorial with Corregidor as its pedestal. Done with proper sensitivity, this memorial will be a perpetual beacon light to show the world the road to peace." On July 17, 1958, he said: "You are rendering an incalculable service to the cause of Philippine-American friendship."

The defenders of Bataan and Corregidor, the representative veterans' group in the Philippines has written in part as follows:

"The veterans' organization in the Philippines will be eternally grateful for the magnificent plans you have for the monument—I can only say that they are with me 100 percent behind the idea."

The Corregidor-Bataan Veterans' Association in the United States has discussed plans to hold its annual reunion on Corregidor when the dedication occurs.

General MacArthur said in a letter to the chairman:

"It is indeed a most worthy purpose. For no soil on earth is more deeply consecrated to the cause of human liberty than is that of the island of Corregidor and adjacent Bataan Peninsula. There, American and Filipino blood is intermingled to immortalize that gallant stand taken to resist against desperately overwhelming odds the onrush of the forces of despotism which sought to blot the concept of freedom from the face of the earth.

"I am quite confident that you will find among our countrymen few who will hesitate to support the erection upon that hallowed ground of so suitable a memorial to those who there fought and bled and died in desperate resolve that liberty should live."

Fleet Adm. Chester W. Nimitz has endorsed wholeheartedly the proposal and served on the jury of award which selected the winning design for the memorial.

Gen. Jonathan M. Wainwright wrote as follows: "Even while the fighting was going on, I visualized such a thing in the future, and of course, I am more than interested in seeing the project go through."

Major General Moore, who surrendered the Corregidor forces, said: "I feel that such a symbol erected on that hallowed ground would exert a deep influence throughout the Far East and impress upon all who see it the unselfish ideals of American democracy."

I could quote similar statements from Gen. A. M. Jones, one of the commanding generals on Bataan; General Krueger who commanded the Army ground forces and General Kenny who commanded the Army Air Corps, both served on the jury of award and are giving their support to the cause.

No effort has been made to collect endorsements and these are but a few of many statements agreeing with the goal of the Commission.

Since this is our first appearance before this committee, may I take a few moments to outline briefly the basic concepts of the Corregidor memorial.

It will be a symbol to every participant in the Pacific war both in the United States and the Philippines of the months and years of his service and sacrifices in the preservation of liberty against an aggressor bent on conquest, tyranny, and enslavement. To such a veteran, and there are over 4 million of them in every part of the United States, it will be deserved recognition of each one's service to his country. Primarily it will be a reminder and record of those who gave their lives to preserve freedom in the world, and with the use of the memorial as a living memorial, which I will mention later, it will continue to serve so that "these dead shall not have died in vain."

It will be a sensitive and appropriate recognition of the most remarkable feat of arms in the world's history, America's participation in World War II, undertaken with no thought of conquest or material gain. In the Pacific, the front was 8,000 miles from our shores, and the battleline extended almost half the way around the earth.

The Philippines were a part of the United States until July 4, 1946, almost one-third of our national existence up to that time. It will be a symbol to every Filipino who sees it, and they will be numbered by countless thousands, of our understanding and appreciation of that long association unique in the annals of history. It will be a permanent and deserved tribute to the Philippines, which cooperated with us and remained faithful for 50 years.

It will cause our ties to remain close when we place on their soil this impressive testimonial of our recognition of the price the Filipinos paid through 4 frightful years for remaining true to the United States and the cause of democracy. It was no light decision, to defy an all-powerful conqueror, and to resist the plausible promises as to co-Asian prosperity, hemispheric solidarity, sovereignty, and freedom. That deliberate choice caused them to suffer more loss of life than the combined losses of the American forces in both the European and Pacific areas combined. The memorial on Corregidor will continue to impress upon the minds of men why an oriental nation, the Philippines, weighed the cost and decided to stand with an occidental nation. It will bear testimony to the Philippine confidence in the integrity of the United States, and its belief in democracy after 50 years of trial. It will stand as the best argument for democracy of which I have any knowledge.

This memorial will be placed by the United States not in Washington or some other American city for the edification of ourselves, but on Asiatic soil which will mean a great deal to all Asiatics. Such a tribute on foreign soil is somewhat unique, and cannot fail to explain better to the world, especially Asia, what is the truth as to the real America, so little understood at the present time in the world, especially Asia, in spite of our largesses running into the billions.

All of Corregidor will actually be a memorial. The Philippine Government has set it aside and, as I have said, created a Commission similar to ours to cooperate with us. They are quite importunate as to the immediate start of the erection of the memorial. They are even now taking visitors to Corregidor and showing them the future site.

Their Congress has appropriated funds for the development and beautification of Corregidor. They are planning through various organizations to make it available and inspiring to all.

They have begun to restore Malinta tunnel. There, was enacted the greatest drama of modern times. In the early days of 1942, it was the Capitol of the Philippines and their great President Quezon was there carrying on for the future of the Philippines. It was the headquarters of General MacArthur and all that was left of the high command of the American forces. It was there that the Treasury of the Philippines was located. It was the hospital for the sick, wounded, and dying, as well as the only real shelter for our intrepid, starving troops from the vicious bombings by land and air.

General MacArthur said he could never forget their gaunt faces, unafraid.

A major goal of the Commission is to use the memorial as a living memorial. We believe that with this design as a symbol, and the memorial as a base of operations, it can appreciably affect the thinking of Asia. These are activities that we expect to carry on without any financial help from the Government but with its guidance.

The Commission has had the cooperation of a number of experts on the Far East in laying the groundwork for practical programs to be developed as a part of the living memorial. Studies have been made by Far Eastern experts in the Library of Congress, the International Cooperation Administration, Cornell University, and the Massachusetts Institute of Technology, as well as by selected Philippine authorities. The ideas have ranged from child education, common tongue, exchange students to and from the Philippines and other Asiatic countries, etc., means of better thought interchange between the Philippines and the rest of the Far East and a forum from which the doctrines of democracy can be proclaimed.

The specific programs and projects to be selected for the living memorial must of necessity be delayed until the memorial is an actuality.

If our great country has an inherent weakness, it is that our way of life is so dynamic that our leadership and our people have little time for constructive thinking on a long-range basis. Our high scale of living makes it difficult to understand the desires and the psychology of the millions who live in a different world from us both physically and mentally. I appreciate the emergency situations which must be met elsewhere and it is understandable that 80 percent of our foreign news deals with the European and Near East situations, yet Russia and Chinese communism are quietly performing in subtle ways in the Far East where half of the people of the world now live and where millions have little information and few fixed opinions as to ideologies. Informed authorities on the Far East seem to agree that the Communist effort there is much more effective than the Democratic, and they freely predict, that unless the situation changes Russian communism will be stronger and stronger throughout that area and among the millions living there, because, as we believe, it has an Asiatic China to front for it.

According to experts it now seems probable that communism will dominate a great number of the nations in the Far East. It is quite shortsighted on our part not to solidify and make use of the great asset that the United States has had and now has in the understanding friendship of the Philippines. The Philippines, an Asiatic nation, has proven its dedication to the democratic way of life. It has stamped out effective communism in the Philippines and openly alined itself with the United States and democracy. It is worthy of note that the Philippines stand at the most exposed frontier, within 1 hour's time from China by a flight of rocket planes.

No other foreign country, with the possible exception of Russia, has such an important asset as we have in the Far East. The Filipinos are largely of the same racial stock as many, many millions in Asia—Indonesians, Malayans, Siamese, etc. There are hundreds of thousands of Chinese in the Philippines and very many of the people of the Philippines have close ties of blood, friendship, and business with those living in other Asiatic countries, even behind the Bamboo Curtain.

The Philippines, with its understanding of Asiatic psychology, in cooperation with the United States can help to do much to combat communism in the Far East. The Philippines can explain democracy to their fellow Asiatics, in a way that they will understand, and they can put the United States in the proper light in so doing. Under the aegis of the Corregidor-Bataan symbol, which repre-

sents what the Philippines sacrificed to preserve the democratic way of life, they can intelligently influence the oriental mind. We know that very often the service or generosity of the United States is misunderstood and mistrusted.

It is very difficult to sell the American way of life, when America is doing the selling.

Of course, a comprehensive effort on the part of the Philippines would have to be well thought out, financed and cooperatively controlled.

A basic task of the Commission of the greateset importance was to create and select a design that would be inspiring and worthy of the things commemorated. We felt that thought should be given to oriental forms and tastes as well as occidental. We realized that artistic forms in painting, sculpture, etc., impress people differently due to variations in human nature. Realizing this the Commission felt that it is highly desirable to enlist the interest and participation of the best experts in the field of architectural art.

The Commission sought competent advice and direction in this field for our own staff. They secured the part-time service of Mr. John F. Harbeson of Philadelphia. He has been recognized for years as one of the leading men in his profession. Under his direction the Commission conducted a nationwide competition among the architects of the United States, in which 43 men or firms participated. All designs were submitted anonymously and among the competitors were many of the outstanding firms in the United States. After several months the competition in two stages was completed, and the winning design was chosen. It was created by a splendid but lesser-known firm from Seattle, Wash., Naramore, Bain, Brady & Johanson. The jury of award had as its chairman Mr. Pietro Belluschi, dean of the School of Architecture and Planning, Massachusetts Institute of Technology. There were seven other outstanding men in the field of architecture and sculpture and three from other professions, Admiral Nimitz, Gen. Walter Krueger, and Gen. George C. Kenny. The design chosen was cordially approved by our Commission. The Philippine Shrines Commission acting for the Philippine Government accepted and approved the selection. Incidentally, the members of the Philippine Shrines Commission were highly pleased and individually expressed their great satisfaction with the design. The jury of award in its report said in part, "The final selection was made through gradual elimination. The majority found the winning design to possess sculptural qualities of a high order, to be a simple form easy to remember, to admire and to love; it compared well with the shape of the island, and it had the right scale. The jury in the end believed that it had spiritual power and its meaning did not need to be explained any more than the Washington Monument needs to be explained."

All Corregidor is virtually the base of the memorial. It will stand at the top of Corregidor which is at that point 500 feet above the surrounding sea. The memorial will rise approximately 250 feet higher or 750 feet above the nearby ocean and bay. Between its two uplifted arms there will be a beam of light reaching to the sky and it will throw its rays far out across the China Sea. All incoming and outgoing vessels will pass within 1 or 2 miles of the memorial and all air travel from the east and west through Manila will see it vividly.

The architect gives his interpretation of the structure in part as follows:

"In the design of the monument for the Corregidor-Bataan Memorial we have tried to express in concrete form an abstract symbol of hope and aspiration. It was intended that this form be abstract enough to permit the individual viewing it to read into it values from his own experience. We felt this to be very important inasmuch as the monument should have equal, if not similar, or identical, meaning to peoples of East and West.

"Some of our thoughts were as follows:

"We searched for a form that was not static, but one that would be dynamic, feeling that a static form such as the vertical shaft expressed the memorial concept of a finished past. We felt that here was the need for a form that somehow would express a future, not a past; a hope, and not a sorrow.

"The double form of parabolic concrete shells is essentially the shape of outstretched arms, or of simple outstretched hands, an inherent form of hope and supplication universally understood.

"The double form can also symbolize the East and the West, each a separate and distinct entity, yet each equally striving to the highest point; each held to the other by an encircling bond without which the structure of their civilization would collapse, even as the structure of the monument would collapse without the tie between the two.

"The opening, or eye, between the two portions of the monument, with its single vertical unwavering beam, protected by the encircling monument, symbolizes the singleness of purpose, shared by both East and West. The shaft of light also symbolizes the brilliance of mutually shared ideals and hopes, and also by its transitory quality emphasizes the need for constant care and nurture of these ideals and hopes.

"Other thoughts perhaps less abstract:

"The monument should be visible in silhouette from Manila, therefore it was placed on the very top of the island. By day the silhouette would be dark against the light sky. By night, the underside of the monument would be brightly lighted to effect a white silhouette in a dark sky.

"The monument will also be visibly important from the airlanes into Manila. With this in mind our design calls for the top surface of the monument to be surfaced in brilliant-colored mosaic. This design might depict symbols of East and West."

We have been extremely gratified at the approval of the design by most of those who have seen it and studied it. Particularly pleasing has been the attitude of the Filipinos, who recognize that it gives consideration to artistic forms other than the simple classic style which had been traditional in this country.

My father used to quote a Latin phrase to me "De gustibus non disputandum"—"You can not debate taste." But we are highly gratified at the enthusiasm of nearly all of those who have studied the design.

The outline I have just given to you was for your information and does not directly appertain to the bill before you. By previous bills which have heretofore passed Congress, the Commission was empowered to erect the memorial. The Commission has the authority now under previous acts of Congress to do all the things which have been mentioned so far.

Japanese High-Seas Fishing Is Destroying Alaska Red Salmon Fishery

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. PELLY. Mr. Speaker, I hope one of the priority items on the agenda of the 86th Congress will be legislation to protect the Alaska red salmon fishery. We have regulated ourselves by allowing only 2 days fishing a week during the season and cutting down on the amount of gear in the interest of conservation—all to little or no purpose—because the Japanese refuse to cooperate as shown by the following recent editorial from the Seattle Times:

FEARS FOR BRISTOL BAY FISHERY BORNE OUT

Forebodings of a disastrous run of red salmon in the Alaska fishing industry's principal area of operations in Bristol Bay have been fully borne out by events.

After one of the shortest seasons in history the catch and pack of red salmon in the Bristol Bay fishery were the poorest and smallest on record.

The total pack is tentatively estimated at 232,000 cases in round numbers. The pack last year was 463,491 cases. But the years more suitable for comparison, according to salmon-industry spokesmen, are 1952 and 1953 when the salmon of the 1948 run were spawned. The pack in 1952 was 712,503 cases, in 1953, 443,057.

The collapse of this valuable fishery is attributed almost entirely to the operations of the Japanese fishing fleet which for several years has been taking huge numbers of Alaska salmon on the high seas.

There was a "flukish," unexpectedly large run of pink salmon in some Alaska waters this season which helped to produce substantial increases in the total Alaskan salmon pack, but this has no bearing on the Bristol Bay red-salmon problem.

In anticipation of a record drop in the red-salmon run, the Fish and Wildlife Service had cut the 1958 season virtually in half and issued regulations severely restricting fishing to protect the year's spawn in Alaska streams.

Unsuccessful efforts purportedly had been made by the American State Department to persuade Japan to restrict its fishing activities to an area farther west of the line established by the tripartite Pacific fisheries treaty of 1952 as the eastern limit of the Japanese ocean operations.

The Japanese Government declined to comply with this request. There were news reports also that Japanese commercial fishermen themselves had agreed to limit their high seas fishing to an area farther west.

While there is no evidence that the Japanese fishing ships crossed the treaty line or otherwise violated the treaty, there is no evidence, either, that the Japanese fishermen heeded this supposed private agreement.

The factor that has decimated the Alaska red-salmon run is that the Japanese fishing fleet has been taking great numbers of immature as well as mature salmon as the fish circle far to the west in their ocean cycle. These salmon obviously never return to their spawning streams in Alaska to reproduce their stock. The Bristol Bay run in future years cannot, therefore, be expected to be any better than this year's.

This intolerable situation, ruinous to one of the world's valuable food resources cannot be permitted to persist.

Extraordinary measures must be resorted to by the State Department and all other appropriate agencies to convince the Japanese Government that the Alaska red-salmon fishery must be saved.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

A National Cultural Center

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 15, 1958

Mr. WILEY. Mr. President, next week, the House of Representatives will have the opportunity to provide a great cultural beacon for the people of the United States and of the world.

The House will be acting on S. 3335, the Fulbright-Anderson-Wiley bill, as amended by its Public Works Committee, to provide a National Cultural Center in the District of Columbia.

I have frequently brought to the attention of my colleagues in the Senate the importance of this center, as sponsored on the House side by Congressman FRANK THOMPSON, of New Jersey, and others.

Although I am not a member of the Senate District of Columbia Committee, I feel very keenly the responsibility which all of the Members of the Congress have to the people in the greater Washington area.

WISCONSIN, OTHER STATES WELCOME THIS PROJECT

But, as a United States Senator from the State of Wisconsin, I feel, in this instance the responsibility which I have, as well, to the people of the 48 States to help provide for them a great National Cultural Center which would be a showplace of the performing arts.

Alone among the great powers of the world, Washington, unfortunately, lacks a major center for this purpose.

In 1955, we of the Congress authorized formation of an Auditorium Commission, giving that group the responsibility for designing a structure and determining a site.

Next week, the House will have the opportunity to move ahead one great step toward such a center. Let us not turn back.

In favorably reporting S. 3335, the House Public Works Committee responded to the enthusiastic support from the Capital area. It responded, as well, to the messages of many private citizens, who indicated that they are ready, willing, and able to help launch the drive for the collection of private funds to bring this center into being.

NO SO-CALLED ECONOMY ISSUE INVOLVED

All that remains now is for the House of Representatives to "flash the green light" next week.

I earnestly hope that this will be done. Let not any misguided so-called economy drive sidetrack this action. There is no economy issue involved in this legislation. The funds will be raised privately—and within 5 years.

THE INSPIRING LINCOLN CENTER IN NEW YORK

As an illustration of what private enterprise can do, I send to the desk excerpts from an article which appeared in the July 19, 1958, issue of the Saturday Evening Post entitled "Colossus on Broadway."

This article describes the progress toward a splendid project which I have previously cited to my colleagues, the new Lincoln Center for the Performing Arts, in New York.

Under the inspired leadership of Mr. John D. Rockefeller, III, president, some of the most famous names in the arts in America; together with top executive talent in American business and other areas of our national life, are teaming together to raise $75 million to pay for the center.

They hope, moreover, to provide a fund of perhaps $20 million that will be used in a long-term program to present contemporary works, encouraged experimentation in the arts, and achieve related objectives.

AN ANSWER TO DOUBTERS AS TO FUND-RAISING

I present this article because it depicts the high caliber of private voluntary effort, such as will not only see the Lincoln Center project through to success, but which will see the Nationtal Cultural Center through to success.

Some of the critics of the District of Columbia project have questioned whether private leadership will come forth. The answer is that leadership has already come forth; notably in the person of Mr. Robert Dowling, who has worked so tirelessly as chairmap of the American National Theater and Academy and in other artistic efforts and civic causes.

New York's project provides an excellent model of voluntary action, which, I am sure, we can count on, as regards counterpart work here.

I cannot too highly commend men like Mr. Rockefeller; Mr. Clarence Francis, who is heading up the fund-raising campaign; Mr. Richmond R. Gardner, cochairman; Messrs. Arthur A. Houghton, Jr. Devereux C. Josephs, and Charles M. Spofford, vice presidents; Mr. Robert E. Blum, treasurer; Mr. Edgar B. Young, secretary; Mrs. Robert L. Hoguet, Jr., chairman of the woman's committee; Mr. Lander Greenway, chairman of special gifts; and others too numerous to mention. They are taking time out from their busy lives in order not only to raise a great edifice, but a living organism for cultural presentations for and by the American people and for and by friends of the performing arts everywhere.

I ask unanimous consent that excerpts from this article be printed in the Appendix of the RECORD, preceded by a list of distinguished officers and campaign committee members of the Lincoln Center.

There being no objection, the excepts were ordered to be printed in the RECORD, as follows:

LINCOLN CENTER FOR THE PERFORMING ARTS, INC.

Officers: John D. Rockefeller 3d, president; Arthur A. Houghton, Jr., vice president; Devereux C. Josephs, vice president; Charles M. Spofford, vice president, Robert E. Blum, treasurer; Edgar B. Young, secretary; Reginald Allen, executive director operation; Otto L. Nelson, Jr., executive director, construction.

Campaign committee: Clarence Francis, chairman; Richmond P. Gardner, cochairman; Mrs. August Belmont, John E. Bierwirth, Thomas D'Arcy Brophy, Benjamin J. Buttenwieser, Christopher T. Chenery, Harold W. Comfort, Mrs. Lewis W. Douglas, John W. Drye, Jr., James A. Farley, G. Keith Funston, Lauder Greenway, Harold H. Helm, Mrs. Robert L. Hoguet, Jr., Arthur A. Houghton, Jr., C. D. Jackson, David M. Keiser, Robert Lehman, John J. McCloy, Thomas A. Morgan, Charles S. Munson, Franz Schneider, Howard C. Sheperd, Lansing P. Shield, Winthrop H. Smith, Thomas J. Watson, Jr., Sidney J. Weinberg, Mrs. Frederick K. Weyerhaeuser.

COLOSSUS ON BROADWAY

(By Joe Alex Morris)

A sentimental saying along Broadway is that "there's no business like show business"—meaning that any guy or any doll with a song or a dance can dream of success on the street of bright lights and slightly broken hearts. It may seem preposterous, therefore, that the newest and most promising recruit to Broadway is John D. Rockefeller 3d, who can't carry a tune, doesn't dance the rumba, and was once suspected of suppressing a yawn while seated in the Golden Horseshoe of the Metropolitan Opera House. But Rockefeller does have a dream—a multimillion-dollar dream that may prove more exciting than anything that has happened in show business since Good Queen Bess split her gloves applauding the premiere of Romeo and Juliet.

A lanky, retiring man, Rockefeller got into the entertainment world at the age of 50 as president of Lincoln Center for the Performing Arts, Inc., a nonprofit corporation dedicated to establishing in the United States a unique focal point for the finest talent in music, dancing, and drama. To achieve this immodest goal, the corporation expects—with the help of philanthropic organizations, of labor, business and civic groups, and of the public generally—to raise approximately $75 million for an American cultural center without parallel in history.

The realization of any ambitious civic plan obviously requires an organization dedicated to overcoming formidable and complicated difficulties, and Lincoln Center's brief corporate history already is studded with trials and tribulations. Lincoln Center, for example, is one phase of a much larger $205 million New York City slum-clear-

ance-and-redevelopment project which will include new parks and apartment buildings and probably educational buildings. A group of property owners opposed to certain parts of the larger project—but not to Lincoln Center—unsuccessfully challenged it in the lower courts. After repeated appeals, the United States Supreme Court finally declined to interfere with the lower-court decision on June 9 of this year. Since then, other litigation has been instigated but Lincoln Center for the Performing Arts has proceeded in the belief that its plans will not be seriously delayed regardless of the length or outcome of such legal controversy. The fund-raising campaign, under direction of Clarence Francis, former chairman of General Foods Corp., has gained momentum steadily this year and the center has formally acquired title to an 11-acre site near New York City's famous Central Park and negotiations are currently under way for nearly 3 acres more. In the next few years, it is confidently hoped to establish there:

1. A spectacularly modern opera house with 3,800 good seats, all the newest stage improvements, an orchestra pit that can be raised or lowered by elevator, and a television studio for special performances. The balconies will be hung away from the walls to improve acoustics and the building will be double-shelled to prevent the audience from hearing the shriek of a taxicab in the street or the rumble of an airplane overhead.

2. A 2,800-seat symphonic concert hall that will take full advantage of all proved innovations to achieve acoustical perfection. It will also be possible to convert the hall for pop concerts by installing tables at which refreshments can be served.

3. A 2,500-seat theater for ballet, operetta, and other dance groups, which, for the first time in America, will be provided with a home comparable to state-supported organizations in other countries.

4. A theater seating about 1,400 persons for repertory dramatic presentations, for recitals, and for small or intimate operas that lose some of their effectiveness when presented in large auditoriums.

5. An unprecedented educational center for advanced students in the performing arts. The school will be designed to foster development of recognized talent and creative ability, to encourage experimentation and to establish a unique laboratory in which student and professional musicians, dancers, actors, playwrights, conductors, composers, and technicians will mutually benefit by close association and collaboration.

6. A library and museum for research and study of everything in the performing arts from ancient musical instruments to recordings of modern productions.

"Lincoln Center for the Performing Arts is the most exciting vision as well as the largest civic project ever undertaken anywhere on a private philanthropic basis," one distinguished authority said recently. "There are always plenty of troubles between planning and achievement. But success of this project could make America the recognized cultural capital of the world and be a major factor in destroying the myth that this is a land devoted only to crass commercialism. More important, it can assume leadership in making the best in the performing arts available to the many instead of the few."

These are high-sounding and perhaps highbrow words. Neither Rockefeller nor his associates in Lincoln Center speak so extravagantly of their objectives. Yet, some such aim lies behind the many months of hard work and down-to-earth planning that more than a score of distinguished professional and businessmen have put into the project. There are, sponsors of the center believe, millions of Americans with more leisure than ever before and with greater interest in opera, ballet, drama and symphonic concerts. These entertainment groups are not and probably will not be clearly profitable fields for commercial enterprise, but audiences are steadily increasing, and Lincoln Center is based on the theory that, in the future, grand opera must be for the masses and not merely for the carriage trade.

The "performing arts" is a stilted name that might cover almost any living performance—except possibly a singing-dog act—but at Lincoln Center it will mean entertainment only on a high level by the best artists. The opera house, for example, will be the new home of the Metropolitan Opera Association, and the concert hall will house the New York Philharmonic-Symphony. Similarly distinguished groups—not yet selected—will be based in the repertory and ballet theaters, and still other recognized American and foreign companies will be invited for limited engagements to keep the great complex of air-conditioned auditoriums operating the year around.

But this concentration of famous companies in a handsome and modern Manhattan setting is only part of the vision behind Lincoln Center.

"There isn't much point in merely repotting the Met or the Philharmonic," Rockefeller once pointed out. "There must be an entirely new concept that will provide a creative stimulus."

To encourage creative work, the center contemplates a 10-year program costing about $1 million a year to facilitate experimentation in new forms, presentation of contemporary works and revival of significant but less popular classics. Such activities are essential to cultural progress although they are normally beyond the means of established organizations such as the Metropolitan Opera Association. But the most revolutionary feature of the long-range planning of sponsors—and of Rockefeller, in particular—is educational. The school for advanced students in all of the performing arts will be created by reorganization of the Juilliard School of Music under direction of William Schuman, a leading symphonic composer and an experienced administrator.

The several hundred students in the school will be selected by the faculty strictly on the basis of talent. Most of them presumably will be graduates of other schools in the United States or abroad, and will range in age from about 18 to 28 years. The purpose of their studies at the center will be to bridge the gap between academic training and the beginning of a professional career. There will be no definite period of attendance and no graduation, but there will be a specialized course of study and work under leading instructors that might be compared to the internship of a medical-school graduate before he becomes a practicing physician. The school will have its own small theater and concert hall, so that students will have opportunity to create, produce, and perform.

A still greater stimulus to creative work is expected to come from the close association of students or young "interns" with famous professionals appearing at the center. The students will attend rehearsals of the professional companies in order to become familiar with all stages of producing an opera or a play. They will be able to study different techniques and to consult with top professionals in their fields. But this collaboration between the school and professional groups will not be a one-way street. The professionals are confidently expected to profit, too, by their proximity to the most promising young artists in their fields and by exposure to the creativeness of youth. Out of such a cross-fertilization of ideas among the performing arts and among students and professionals will develop, it is believed, the creative atmosphere so essential to great cultural progress.

And, in Rockefeller's mind, the bringing in of young people and young ideas may well be the center's most important contribution to the future.

This rather dazzling concept of Lincoln Center represents a remarkable break with the past, but it is by no means a one-man idea or a Rockefeller project. On the contrary, it is a civic undertaking—the product of many minds and of a strange series of circumstances dating back more than a quarter of a century. * * *

* * * * *

"I enjoy music, but I have no special background for it," Rockefeller remarked later, "unless you count a few years in which my parents unsuccessfully encouraged me to become familiar with a violin. But I believe there is a steadily increasing interest in this country in good music, opera, ballet, and theater, perhaps because people are better educated, have greater leisure and enjoy vastly improved methods of communication. Children today are exposed to music from a very early age and they know and understand it far better than when I was a boy. Encouragement of this trend can contribute to the welfare of America.

"In addition, it can be of great importance in our relations with other nations. In travel abroad, I have often observed the interest of ordinary peoples in artistic and cultural achievement. Even the poorest homes in Japan, for example, always have some artistic feature—perhaps only a flower arrangement or a vase—that emphasizes their aspiration to cultural progress. They respect nations that encourage such progress. The disturbing thing is that many foreigners mistakenly believe Americans are concerned only with material achievement. They admire our technology, but look elsewhere for cultural leadership, despite the fact that New York is perhaps the greatest cultural center in the world today. This has been a handicap in our relations with other peoples and, for that reason, it is my hope that Lincoln Center may become a symbol before the world of America's cultural development."

The joint committee of which Rockefeller became a member held only one meeting, but it was an important one. Rockefeller had already begun to toy with the idea of expanding the music-center proposal to include other performing arts, and educational facilities. He knew, for example, that it would be more likely to attract financial aid from big foundations if training of students was included. He believed the broadest feasible approach was likely to be the most successful. After a few hours' discussion, the joint committee agreed to dissolve itself and set up a larger exploratory committee to establish a definite objective. Rockefeller was elected chairman of the exploratory committee.

The next 18 months may have been the busiest and most exciting of Rockefeller's career. It was typical of his methods that almost the first thing he did was go up to 65th Street and Broadway and pace off the site that Moses had allotted to the opera and symphony. He knew immediately that it wasn't large enough, and later, he persuaded Moses to expand it to three city blocks. He knew virtually nothing about show business, but he began learning in a hurry by cramming like a schoolboy facing final examinations. His tutors were tops in their fields, and they kept him busy from early morning until late at night. He might consult Elia Kazan or Joshua Logan on problems of the drama at breakfast; discuss the ballet with Lincoln Kirstein or Choreographer George Balanchine at luncheon; go into the trials and tribuations of composers with Aaron Copland in the afternoon; learn about the headaches of repertory from Cheryl Crawford; and spend an evening talking grand opera with Rudolf Bing.

With Wallace K. Harrison, one of the architects of the United Nations building

and Anthony A. Bliss, president of the Metropolitan Opera Association, he toured the famous musical and theatrical centers of Europe, studying the methods and facilities of La Scala Opera House in Milan, the Comédie Française in Paris, Sadler's Wells in London, and a half dozen postwar German opera houses that have attracted wide attention for their technical improvements. A group of European architects and acoustical experts—Alvar Aalto, of Finland; Sven Markelius, of Sweden; Walther Unruh, of Germany—also were brought to New York to confer with American designers.

Rockefeller and his committee wanted to take advantage of the latest technical developments abroad, but the basic concept of Lincoln Center was American and their most important consultations were with men and women who had had experience in similar projects in the United States. Many of the basic policies to be pursued were discussed at a 2-day seminar attended by educators, composers, architects, critics, producers, labor leaders, and patrons of the arts from widely scattered parts of the country. James D. Zellerbach discussed the problems of the San Francisco Arts Center; Samuel R. Rosenbaum related experiences of the Philadelphia Orchestra board; Charles R. P. Farnsley told of the development of a cultural center at Louisville, Ky.; Mrs. Helen M. Thompson, of Charleston, W. Va., who is executive secretary of the American Symphony Orchestra League, emphasized the need for a center at which trainee conductors could get professional experience. A second similar seminar in the summer of 1956 was devoted to the need for developing educational facilities to carry young artists across the gap between technical training and professional performance.

As a further contribution to planning, the entire staff of the Metropolitan Opera company was asked to make suggestions for what would be needed in an ideal opera house. The result was a 40-page memorandum covering everything from convenient storage space for sets to a heated swimming pool for exercise between rehearsals. All thought of an ideal house was quickly dropped when architects estimated that it would cost almost $50 million to carry out the suggested plans.

After a few months in his new job, Rockefeller still couldn't carry a tune, but his skull was crammed with an amazing collection of statistical information on the performing arts. Once every 2 weeks, he sat down with the exploratory committee to discuss progress and plan the next steps. These meetings could have been exceedingly difficult. In the past, it had often proved impossible to achieve a meeting of minds among representatives of a single group such as the opera. The meetings of the exploratory committee, however, brought together a score of distinguished men long accustomed to individual leadership—Arthur A. Houghton, Jr., president of Steuben Glass, Inc.; Devereux C. Josephs, chairman of the board of New York Life Insurance Co.; David M. Keiser, chairman of the board of Guantanamo Sugar Co.; Robert E. Blum, president of the Brooklyn Institute of Arts and Sciences; Irving S. Olds, lawyer; George D. Stoddard, dean of education at New York University; C. D. Jackson, vice president of Time, Inc. Furthermore, in their relations with Lincoln Center each of these men represented a different immediate interest. It would not have been surprising if their discussions had covered everything and got nowhere.

Yet, from the beginning, the sessions set some kind of record for speed and collaboration and hard work. There were, of course, many differences of opinion, but these usually melted rapidly before the general enthusiasm of the group for the broad concept of Lincoln Center. Some of the busiest men in New York accepted and eagerly executed assignments that required them to devote a large part of their time to the project. They attended meetings faithfully, and there were comparatively few flares of temperament.

* * * * * * *

The exploratory committee went out of existence and Lincoln Center for the Performing Arts, Inc., was born in June of 1956, with Rockefeller as president.

The next stage of work—carrying out the plan—plunged Rockefeller into complicated negotiations with Federal and city officials, particularly planning commissioner Moses. Nobody has ever accused Moses of being a patient or conciliatory negotiator. He has probably done more for New York planning, and enjoyed more rough-and-ready controversies in doing it, than any other figure in the city's history. He wanted to get the plans for Lincoln Center "frozen" as soon as possible, and his approach was one of "Let's get going; you can't wait or the whole thing will die on its feet."

To a certain extent, the directors of Lincoln Center welcomed the emphasis on speed, because the new concert hall must be completed by 1960 or the Philharmonic Symphony will be homeless. But there also were many reasons for moving cautiously on the overall plan until the countless details of architecture and financing could be worked out. It took a great deal of Rockefeller's "soft persuasion" to keep them on an even keel during the winter of 1956–57, but, over the long run, his quiet, painstaking persistence seemed to complement the efforts of the fast-moving, fast-talking, and temperamental Moses. They worked together with a minimum of friction, which was essential to success of the project.

The detailed blueprint for building and operating Lincoln Center for the performing arts probably will not be completed until after the site has been cleared. But basically Lincoln Center, Inc., will act as a kind of management company for technical operation and policy making in the center as a whole. Each participating group, such as the Metropolitan Opera Association, will collaborate, but will remain completely autonomous in handling its own affairs, and will be responsible for its own deficits.

In a campaign within the next year, the sponsors hope to raise about $75 million to pay for the center and to provide a fund of perhaps $20 million that would be used in a long-term program to assist the school to present contemporary works and to encourage experimentation in the performing arts. About half the total sum has already been raised. If these hopes are fully realized, the center will be debt free, and rents paid by nonprofit organizations using the auditoriums presumably will be comparatively modest. It is also believed that by combining maintenance and other services—ticket sales for all auditoriums at a big central box office, for example—there will be considerable savings in the cost of operation of various units in the center. In addition to the Metropolitan Opera Association and the New York Philharmonic-Symphony, the center expects eventually to have a resident ballet company and repertory company. All these groups will make their auditoriums available to guest companies selected by the center's management during months outside of their own regular seasons, thus keeping the stages busy throughout the year.

The half dozen buildings in the center will be clustered around a large central plaza and flanked by city parks. An underground garage, with facilities for parking 700 automobiles, will have moving stairs running to the lobbies of the auditoriums and there will be an underground connection with the subway system.

A great deal of hard work remains to be done before Lincoln Center for the Performing Arts can become a reality, but progress has been surprisingly rapid since the day in 1955 when it was only a dream. Three years does not necessarily make anybody an expert in the entertainment field, and nobody has yet reported seeing Rockefeller strolling down Broadway, singing "Show business is my business." But when, on behalf of the board of directors, he put his signature to the agreement to buy and develop 11 acres touching on Broadway at West 65th Street, Rockefeller became one of the top figures in the world of the performing arts.

"It's a great challenge," he summed up recently with a slow smile: "But it's a lot of fun too."

Lt. Comdr. Frank M. Adams

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SMITH of Mississippi. Mr. Speaker, all Americans are proud of the heroic achievements of the submarine *Nautilus* and its crew in making its historic voyage under the Arctic ice cap.

The people of Tunica, Miss., are especially proud of the event, however, because the executive officer aboard the *Nautilus* was Lt. Comdr. Frank M. Adams, a native of Tunica who was appointed to the United States Naval Academy by my predecessor, the Honorable Will M. Whittington.

Under unanimous consent, I include an article from the Tunica Times-Democrat concerning Commander Adams' role in the historic voyage of the *Nautilus*:

LIEUTENANT COMMANDER ADAMS, "NAUTILUS' " SECOND IN COMMAND, ON HISTORY-MAKING VOYAGE UNDER ARCTIC ICECAP—IN CHARGE OF ATOMIC SUBMARINE'S CRUISE FROM ICELAND TO PORTLAND, ENGLAND, AFTER SAILING FROM HAWAII UNDER ARCTIC SEA AND ACROSS THE NORTH POLE

Tunica's celebrity is a native son, Lt. Comdr. Frank M. Adams, executive officer aboard the *Nautilus*, whose history-making voyage under the Arctic icecap was announced Friday at special ceremonies at the White House when President Eisenhower presented the Legion of Merit to the *Nautilus'* skipper, Comdr. William R. Anderson, of Waverly, Tenn., and a Presidential unit citation for the submarine's crew of 13 officers and 98 men.

The Times-Democrat's news release from the Navy Department is dated August 5, en route Honolulu to Europe, is titled: "Transpolar News Release," and is quoted:

"Lt. Comdr. Frank M. Adams was a member of the crew of the U. S. S. *Nautilus* when the world's first atomic-powered submarine steamed under the vast Arctic icepack to make a record-shattering voyage from the Pacific to the Atlantic Ocean by way of the North Pole.

"The *Nautilus* left Honolulu on July 23 and after a rapid submerged voyage through the Bering Strait went under ice off Point Barrow, Alaska, and proceeded due north to become at 11:15 p. m., eastern daylight saving time, on August 3, the first ship in history to reach the North Pole. After steaming over 1,700 miles under the polar pack the remarkable submarine on August 5 entered the open waters of the Greenland Sea west of Spitsbergen and continued south to the Atlantic to become the first ship to

make the Northwest Passage via the polar route."

The release didn't report that after Commander Anderson left the submarine to go to Washington to receive Presidential honors and the Nation's acclaim, Lieutenant Commander Adams assumed command of the atomic submarine in Iceland for the remainder of the voyage across the Atlantic to Portland, England. The cruise from Honolulu to England, via the Arctic, was completed Tuesday, when the submarine reached Portland. Commander Anderson rejoined his ship in England.

The son of Mrs. Ione Montgomery Adams and the late Harry E. Adams, Lieutenant Commander Adams attended Tunica schools and was graduaed from Marion Institute, Marion, Ala. He received his appointment to the United States Naval Academy from former Congressman Will M. Whittington of Greenwood.

He was commissioned in the Navy in June 1946 after graduating from the Naval Academy. Before becoming executive officer aboard the *Nautilus* on January 10, Lieutenant Commander Adams was on duty aboard the battleship *Missouri* from 1946 to 1948.

Since then, except a 2-year period, 1954–56, when he was assigned to the executive department of the Naval Academy at Annapolis, Lieutenant Commander Adams has been on submarine duty.

Since boyhood, Lieutenant Commander Adams planned for a cereer in the Navy and after graduating from the Naval Academy, became a submarine man, selecting this branch of the Navy for duty.

His mother is in Denver, Colo., visiting her niece, Mrs. Houston Putney, Mr. Putney and family before going to Lindsay, Mont., to visit her son-in-law and daughter, Mr. and Mrs. Ed Magalsky, and family.

Lieutenant Commander and Mrs. Adams, the former Novie Capps of Farmville, N. C., and their children, Clint, Monty and Harriette, live at Gales Ferry, Conn., near New London, were the *Nautilus* is based.

MOTHER, FRIENDS RECEIVE LETTERS FROM NORTH POLE

The letters which have been received locally from Lt. Comdr. Frank M. Adams, postmarked 11: 15 p. m., August 5, 1958, U. S. S. *Nautilus*, North Pole, are already collectors' items, but will be carefully treasured by the recipients.

On the left side of the envelope is a drawing with a map of the northern tip of the world and a fish drawn like a human holding an American flag which is about to be placed at the North Pole. Wording on the cachet or drawing includes: U. S. S. *Nautilus* (SSN57) and the First Time in History.

Among those receiving these important and exciting letters are Mrs. Harry E. Adams, mother of Lieutenant Commander Adams; John W. Dulaney, Sr., cousin; John W. Dulaney III, cousin and godson of the *Nautilus'* executive officer, and M. Gerald Burrow, president of Planters Bank.

Lieutenant Commander Adams wrote to his godson, 3-year-old John III:

"DEAR JOHN: As you will notice from my address I am writing to you from the top of the world—the North Pole. *Nautilus* brought us up here under the ice on a history-making voyage—the first transpolar crossing of a ship from the Pacific to the Atlantic Ocean through the Arctic Ocean via the North Pole.

"Old Santa Claus in his bright red suit just left the ship after a short visit with us.

"I hope that your mother and dad will save this letter and envelope for your future Boy Scout scrapbook.

"Best of everything to you. Love from your godfather."

Mr. Dulaney's letter reads:

"I am writing you this letter as a memento of the first history-making first transpolar voyage by a ship through the Arctic Ocean from the Pacific to the Atlantic via the North Pole.

"*Nautilus* has traveled submerged from Point Barrow, Alaska, and she will emerge in the Atlantic Ocean on August 5, having traveled over 1,700 miles under the Arctic ice pack.

"Please give Irene my love, and I hope to see you all soon."

Lieutenant Commander Adams' letter to Mr. Burrow says:

"I am writing you this letter as a memento of the history-making first transpolar voyage by a ship through the Arctic Ocean from the Pacific to the Atlantic Ocean via the North Pole.

"*Nautilus* submerged north of Point Barrow, Alaska, on August 1 in the Chuckhi Sea and will emerge in the Atlantic Ocean between Spitsbergen and Greenland on August 5.

"Please give my regards to your wife, and to the Holmes."

You're Not Needed, Uncle

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I commend my colleagues attention to the following editorial which appeared in the Palo Alto Times under date of June 5, 1958:

Palo Alto is a city which is served by a well-operated municipal power distribution system. Nevertheless its citizens do not give their blanket endorsement to all public-power projects and insist that Government money be spent only in situations where good business sense prevails.

The following editorial by Miss Elinor V. Cogswell clearly reflects the sound thinking of the citizens of Palo Alto:

YOU'RE NOT NEEDED, UNCLE

(By Elinor V. Cogswell)

Water is backing up from 1 of the 3 dams being privately built in Hells Canyon. Power will start flowing in September through a region that would otherwise face a serious shortage.

Yet it was not until Monday that rock-ribbed advocates of public power at all costs gave up the fight to halt the three-dam project and substitute a federally built high dam on the Snake River—a project that couldn't have been finished for years. A House subcommittee mercifully killed off legislation that would have authorized Uncle Sam to start to begin to get ready to build a dam to meet—after awhile—an urgent need that private enterprise can meet this year.

While the talk went on in Washington, the Idaho Power Co. built dams. The dams will start creating wealth for the Snake River Valley this fall. Taxes will begin pouring into Federal, State, and local treasuries at the rate of nearly $10 million a year.

The fight was silly enough when it started. There are many situations in which public-power projects are desirable; Hells Canyon is not one of them. At the end, the original absurdity of the high-dam plan was compounded, for the Government would have had to repay the power company for work already done, and delay for years the power and flood-control benefits of the project. In addition to calling on taxpayers for some $400 million.

Under a license legally issued by the Federal Power Commission in 1955, the Idaho Power Co. has completed Brownlee Dam, Oxbow Dam, just downstream, is well under way. A third dam in Hells Canyon will complete the system.

The high dam was to hold back some 3,880,000 acre-feet of water—more than it would ordinarily get and more than could be efficiently used. Increasing amounts of water are being drawn off for use upstream, steadily reducing the need for storage capacity.

Use of the term "high dam" for the Federal project has implied that the Idaho Power Co. dams are inadequate midgets by comparison. The fact is that the Brownlee Dam, just being completed, is the second highest rockfill dam in the world—400 feet high and 1,380 feet wide. It will generate 360,000 kilowatts of power as soon as its gets going, and can be expanded to generate 540,000 kilowatts.

The 57-mile reservoir behind it will hold 1,500,000 acre-feet of water, providing for flood control, reserve supply, and recreation.

Oxbow will generate 200,000 kilowatts to start with, and the third dam will add 272,000 kilowatts. That adds up to 832,000 kilowatts initially, with a potential of 1,012,000. The Federal dam was expected to produce 924,000 kilowatts.

It is hard to imagine that power users could get juice cheaper from a $400 million project generating 924,000 kilowatts than from a $138 million job producing more.

Rates charged by the Idaho Power Co. in the Pacific Northwest are 35 percent below the national average. Even if they were not, the potential users would gladly pay more in order to get the power now and put it to work earning for them.

They need it for irrigation pumping, to develop their phosphate resources, and to meet a variety of domestic and commercial needs that stem from expansion of the basic agricultural economy.

If the people who will use the power favored the privately built three-dam project and opposed the Federal plan, who was it wanted the latter? The question has more than casual interest for Californians.

Practically all the agitation for the "high dam" has come from public power proponents in Oregon and Washington who want a Federal agency handling the project so that public power distributors in those States will have first claim on the power—a preferential right ahead of that of private customers in Idaho, where most of the waters of the Snake River originate.

Here we have a familiar issue. Who has the rights to profits from the oil originating in our tidelands—the area of origin, California, or the Federal Government, which claimed paramount rights? Who has first claims on our water, the north in which it originates, or the south, which needs it for uses that are part of the entire State's economy and welfare?

No single formula will serve. In the Hells Canyon case, the claim of the area of origin is strengthened by the comparative costs and efficiency of the rival projects.

Trade Makes Friends

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the New Orleans States:

TRADE MAKES FRIENDS

Fighting communism has been such a costly business that it has come to be accepted as always being expensive.

Yet some of the best campaigning for friends and against communism costs virtually nothing, as Dr. Yale Brozen, economics professor at the University of Chicago School of Business, reminds in the current issue of Freeman, published by the Foundation for Economic Education. His remarks were originally before the Congressional Joint Economic Committee earlier this year.

In a day when we woo other nations by sundry devices—foreign aid, military assistance and treaties of many sorts—look around and see some of our best friends. On them we have exercised few of these means.

Brazil is first mentioned by Dr. Brozen. One of our finest friends year in and year out, she feels close to us in important part because we are her best customer. In turn, she is one of the better customers for United States-produced goods.

To the north is stanch friend Canada of whom we are the best customer. And Canada likewise is one of our major customers, not an aid client. Trade ties us closely to Britain as well.

Communists' efforts show they, too, realize the influence which accrues to them through buying, such as Egypt's cotton, India's hemp and various products from other nations hungering for markets and expanded commerce.

"The purchase of a country's goods," says Dr. Brozen, "is a mightier weapon than many appreciate. This has exceedingly important implications for our trade policy."

Flying in the face of this are those who would needlessly limit and hamstring our trade although it makes solid friends while imposing no additional burdens on the taxpayer.

Salute to Folsom

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. WAINWRIGHT. Mr. Speaker, of the many outstanding tributes to the recently retired Secretary of Health, Education, and Welfare Marion B. Folsom, one of the most inspiring has been made not by a fellow Republican, but by my very good friend on the other side of the aisle, the Honorable STEWART L. UDALL. In a statement to which I heartily asseverate, Mr. UDALL cites Secretary Folsom's common touch, tenacity, and fairness in the following letter to the editor of the Washington Post:

[From the Washington Post of August 8, 1958]

SALUTE TO FOLSOM

Secretary of Health, Education, and Welfare Marion B. Folsom has gone into retirement and perhaps it would not be inappropriate for a Democrat to have the last say on his performance in the Eisenhower Cabinet.

Unlike his predecessor, he believed in the mission of his department, and his positive attitudes vouchsafed a constructive role for his office in formulating and presenting legislation to Congress.

He was cognizant that most worthwhile legislative objectives are achieved through the bipartisan approach. One of his winning qualities was that he gave attention to the particular task at hand, and was quite willing to let the political consequences of his acts come to public notice after office hours and without hyperbole. Even those who generally thought his goals were too low (as with the school-aid bills) respected the tenacity and fairness with which he pursued them.

Secretary Folsom also had a common touch: At times he dropped in at the offices of junior House Members (of both parties) to explain proposals he favored. If he was the quietest member of the Eisenhower Cabinet, it would be a pleasant irony if it turned out he was also one of its most effective advocates as well.

In my opinion, Secretary Folsom well deserved your accolade for a job well done.

STEWART L. UDALL,
Representative of Second District, Arizona.

Time for the Big Stick

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. BYRD. Mr. Speaker, under leave to include a newspaper article I wish to insert an editorial entitled "Time for the Big Stick. It recently appeared in the Chicago Daily Drovers Journal. The editorial follows:

TIME FOR THE BIG STICK

Another round of talk about the national debt and the need for giving the legal limit of that debt another boost has an all too familiar ring. We're told, in effect, that it's a case of "raise it or else.". Again, it is to be only temporary, but, like every instance in which Government spending or taxation are involved, "temporary" soon becomes permanent.

Officials, from the President on down, direfully bring up the ogre of a fiscal year ahead in which the Federal deficit will soar to $11 or $12 billion. Another increase in the legal debt limit and continued burdensome taxation seem to be the only suggestions they have to offer in a situation which would threaten receivership if it were an individual or a private business matter, instead of involving the United States Government.

Whether the administration has been that of Eisenhower, Truman, or Roosevelt, the approach to the national debt and Federal deficit has been the same for years. Any talk of approaching the problem from the other direction—the direction which anyone other than the government would have to take—has been seldom and brief. That is, cut the cloth to fit the pattern and bring government spending into line with income to balance the budget and pay off the debt.

The discouraging thing about it, however, is the apathy which the American people have displayed toward government debt. Fat paychecks and easy money have blinded the average individual to the serious aspect of the situation, even though he is being paid today in dollars worth half, or less, of those received only a few years ago.

To them "government" is something intangible and too remote to be of individual concern. The belief persists that government can continue on its merry spending way, unrestrained, along a road which ultimately will spell national ruin just as surely as it would ruin the individual pursuing a like course with respect to personal finances.

Small wonder, then, that most Congressmen and Senators show little concern for the Nation's financial future and subscribe to a spend-and-tax, tax-and-spend political platform. If the folks back home are content with 40-cent dollars, why aim higher? If they don't care what effect present fiscal policies will have on their children, why should Congress concern itself with posterity?

Until a sufficient number of voters awakens to the seriousness of it all, and demands in no uncertain terms that Congress pass laws to curb such reckless spending and going deeper and deeper into debt, it is rather naive to hope for a change which would force less, not more, Government spending until it is not only brought into line with Federal income, but allows a steady reduction of the public debt.

There is a need for more thinking such as that reflected by Senators BRIDGES (Republican of New Hampshire); BYRD (Democrat of Virginia); and CURTICE (Republican of Nebraska); who have stepped over party lines to back a Senate bill which would not only prohibit the Federal Government from spending more money than it takes in from taxes and other revenues during a given fiscal year, but would further provide that a certain amount be set aside each year to pay off the Federal debt on a systematic basis.

If the people of this country really want to save it from a financial collapse, which could come much sooner than they think and even with tragic suddenness, it's time for them to go after Congress with the big stick and tell that body that, for a change, "or else" means check the Government spending spree regardless of any arguments to the contrary, and get the Government back on its financial feet, or step out and make room for a Congress that will do it.

It might be well to recall again the Soviet boast that its people would force the United States to spend itself into destruction, and that socialism would take over here without the firing of a shot. Could it be that they are already well along the road to attaining that goal?

Improved Methods of Stating Budget Estimates

SPEECH
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mrs. HARDEN. Mr. Speaker, I rise in support of this legislation. I was a member of the committee that held hearings on it. I believe it is worthwhile legislation and that if adopted it will create more efficiency and more economy in government. I hope the House will adopt this resolution.

Its adoption will represent a long step forward in the effort by the Hoover Commission to improve the functioning of the Federal Government.

The bill has had the warm support of thousands of Americans interested in simplifying Federal budgeting and accounting procedures. I have had a great deal of mail on it myself, from good citizens of Indiana's Sixth Congressional District. They see in H. R. 8002 an opportunity of cutting down on Govern-

ment spending, and I think the bill will eventually have that effect.

I have been a member of the House Committee on Government Operations for 8 years and I consider this proposal among the most important ones our committee has handled during that period. I recommend the adoption of the resolution.

Major Breakthrough Under Arctic Icecap by "Nautilus"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely article on the cruise just made by the atomic submarine *Nautilus* under the Arctic icecap. This is also a great achievement for the skipper of the cruise, Comdr. W. R. Anderson.

[From the U. S. News & World Report of August 15, 1958]

NEW WORRY FOR RUSSIA—MAJOR BREAKTHROUGH BY UNITED STATES AT SEA

(A silent, invisible cruise just made by an atomic submarine under the Arctic icecap now promises this for the United States:

(Major military advantage, with American missile-carrying subs able to hide under the icecap, hit much of Russia at will.

(A peacetime short cut for the future, with cargo submarines saving thousands of miles from Atlantic to Pacific ports.)

An atomic submarine, the *Nautilus*, has just given a graphic demonstration of this country's growing atomic power at sea.

The *Nautilus* left Pearl Harbor in the Hawaiian Islands and cruised up the Pacific, along the Aleutians. It surfaced just once, near Alaska, then sailed under the polar icecap, across the North Pole and into the Atlantic, emerging just off Greenland.

Man for the first time had moved across the top of the world under water. On the surface, Rear Adm. Robert E. Peary had pushed to the pole in 1909. In the air, Rear Adm. Richard E. Byrd was the first to fly over the pole, in 1926. It was just last week that Comdr. W. R. Anderson, captain of the *Nautilus*, cruised to the pole under a layer of ice.

The cruise of the *Nautilus* carries with it great significance, both military and commercial. Officially, stress is placed upon the possibility that atomic submarines of the future may achieve commercial value by carrying cargoes across the pole, cutting ocean-travel distances between Atlantic and Pacific ports on an underwater polar route. Unofficially, all attention is centered on the military meaning of the achievement of the *Nautilus*.

HIDDEN WEAPON

The submarine is seen more and more as the great missile-launching platform of the future. Submerged, lying under the vast icecap of the north, a submarine is regarded as almost completely freed from danger of detection and destruction. It can rise under cover of darkness, surfacing in open stretches of water in the ice, to launch the long-range and intermediate-range missiles of the future with their hydrogen-bomb warheads.

Soviet Russia, of all nations, is least protected from this type of sea approach. For 3,000 miles, her nothern coastline is facing the polar icecap. Vital Soviet cities are within range of missiles now developed, from a launching platform within that icecap. Coming within sight are longer-range missiles, which could reach deep into Russia's heartland from launching sites near the North Pole.

Speed and maneuverability of nuclear submarines operating under the polar icecap were demonstrated, too, by the *Nautilus*. Traveling completely submerged, Commander Anderson's submarine averaged a speed of 16 knots, covering 384 nautical miles—or 442 land miles—a day. It traveled about 6,000 miles, surfacing only once.

The voyage showed conclusively, as well, that the crew of a nuclear submarine can exist for prolonged periods under thick ice without ill effects.

AN EXPERT SPEAKS

Just how valuable this ability to cross the top of the world under the polar icecap may be in wartime is explained by this country's top authority on nuclear submarines, Rear Adm. Hyman G. Rickover. In a recent interview with U. S. News & World Report, Admiral Rickover said this:

"A large number of these (missile-carrying nuclear submarines) should be kept continuously at sea, submerged anywhere we want—many of them hiding under the polar icecap. They would constitute a fleet-in-being, ready for immediate use at any time.

"That means that, if anyone declares war on us and actually fires missiles into our country—even if he should manage to destroy the United States—he knows that inevitably he himself will also be destroyed, because we will have these submerged missile-launching bases where he cannot prevent them from firing on him. So this missile-carrying submarine may turn out to be a real deterrent to war."

Admiral Rickover then went on to say: "Consider the problem from the enemy's point of view. He can do something about missile bases which we or our allies may have on land. He can sabotage them, or overrun them, or he can fire missiles at them. But suppose these bases are somewhere in the ocean? Or hidden under the polar icecap? How is he going to find them under millions of square miles of polar icecap?"

Actually, the advantage of hiding under the polar icecap was demonstrated by German submarines which escaped under its edge in World War II.

Russia is highly vulnerable to attack from missile-launching submarines operating in the vicinity of the North Pole, the admiral contends. In the interview, the questions and answers went like this:

Question. Is not the polar icecap a long way from the heart of Russia?

Answer. No, it is not. With a 1,500-mile missile, you can, if you have freedom to use the oceans, knock out almost any part of the world.

Such a submarine can hide under the polar icecap and then go directly anywhere it wants.

Then there is another point. It offers the possibility for other countries to become powerful, to change the international political setup. It would permit England, for example, to increase its importance as a naval power. She would not have to do much more.

Question. What are we doing about getting some of these submarines?

Answer. We have a total of 22 nuclear-powered submarines that either have been built, are building, or have been authorized.

Question. Can all of them carry missiles?

Answer. No. The last 3 of these 22 that were authorized in legislation Congress has just passed will carry Polaris-type 1,500-mile missiles—and the Polaris, which is a non-air-breathing rocket, is still being developed. There are several others that carry Regulus-type missiles—and although these are air breathers, they are operational right now.

PROOF OF POWER

Now the polar cruise of the *Nautilus* demonstrates that Admiral Rickover's idea of using the big icecap is feasible. It promises to have a major impace on the power race between United States and Russia, giving this country a powerful new technique in use of weapons at a time when long-range missiles for launching by submarines are reaching an advanced stage of development.

Militarily, in other words, the submarine's arctic trip opens up new vistas for the United States, gives it an edge in an area where geography makes Russia most vulnerable.

AID TO TRADE

Peacetime uses of the Arctic route are being eyed as well, although the prospects here are more long-range.

There are great savings in distance for cargo-carrying submarines able to use that route. For example, the normal sea route now from Honolulu to London is 9,500 nautical miles long, while a route under the arctic icecap is only 6,700 miles in length. From London to Tokyo, the voyage is cut in half, from 12,200 miles by present sea lanes to 6,300 miles via the North Pole.

Even from ports on this continent, the potential savings in distance are sizable. From Seattle to Oslo, for instance, the distance by present shipping lanes is 9,300 miles, while it is only 6,000 miles by way of the Pole. From Quebec and United States cities along the St. Lawrence seaway to Tokyo, the distance is cut from 10,700 to 8,700 miles.

For both peace and war, thus, the latest cruise of the *Nautilus* promises a major edge for the United States at a time of growing international competition.

The credit for building the *Nautilus* goes to Adm. Hyman G. Rickover, who is an expert in the nuclear power field. I thought the readers of the RECORD would be interested in his reasons for the success of the *Nautilus* project, which follow:

THE ADMIRAL SPEAKS HIS MIND

(Adm. Hyman G. Rickover, the man who built the atomic submarine *Nautilus*, went before the Senate Armed Services Committee last week and revealed some of the things he had learned while breaking trail in the nuclear power field. Here are some excerpts from his testimony that are pertinent to the current national determination to meet the challenge presented by Russia's progress in military technology.)

The military organization is not set up to do development work. It is set up mostly to do routine work. So if anyone comes in with a new idea, the people in the organization naturally tend to make him conform to the organization because conformity is prized.

There is still too much conformity rather than performance—conformance rather than performance.

So the first thing that a man has to do is to make up his mind he is going to get his head chopped off ultimtaely and if he does not have that feeling he will never get things accomplished in the military.

So when I took this job I knew that if I were going to do it in a proper manner I would naturally displease many people and cause them to be angry with me. My anticipation proved to be quite correct.

The reason my organization is efficient is not because I can find good people. There are no good people to be found. The good people already have good jobs.

All you can ever do is to find potentially good people and then you must train them yourself.

The most depressing thing that comes out of the interviews with job candidates is the fact that, whether they are civilians or officers, they do not read, they do not study, once they leave school. The ability to make money, the ease of making money for anyone who has been through college is so great in the United States that we have an expression: We say they are becoming "nest builders" or "egg hatchers." They are just spending much of their time working around the house. They are not improving themselves enough professionally.

There can be no division between responsibility and authority and really get a job done effectively and rapidly.

Now, the ordinary Government agencies are geared to the concept of the division of powers, checks, and balances, just as is the Federal Government. This system is perfectly all right for more or less static or routine things, but it surely does not work today when weapons are so powerful and so fast. * * * Its primary purpose is to see that everyone does his job by the rules. But there are no rules for development. If there were rules, it wouldnt be development.

If we lose a war, it will make no difference whether all of the rules of bureaucracy were carried out or not.

I would like to amplify this point, because I think right here you have what is wrong with some of the large-scale research and development work. It is not money. It isn't money altogether. To some slight extent, yes; it is money, but it also takes time to spend money. In fact, if you give a man too much money, he can waste time.

And I surely would like to disabuse any of the Senators here that all you have got to do is appropriate a lot of more money and you are going to get things done. It is time we must buy, and time today is our measure of survival.

It is more the getting qualified people to do a job, make sure they train their people and make sure, and I think—I wouldn't be surprised that there may not be over 10 or 15 people in the whole United States who are capable of handling large-scale research and development work.

Make sure when you get one of those guys that you don't let everybody hound him to death and tie him up with trivia.

For instance, my time and the time of most of my leading people, is spent on things which have no real relation to our job. We are at the beck and call of every staff, every staff member there is in Washington. And a good deal of our time is spent in protecting ourselves—in preventing bad things from happening.

"Well," you could say, "Why do you pay attention to them? Why don't you disregard them?" You can't do that. You can't live in an organization and just disregard people. You can't, because you will get everybody down on you, and it will become difficult to get things done.

I think we are kidding ourselves. I think most of our people cannot understand that we are actually at war. They don't understand it. They need to hear shells. They are not psychologically prepared for the concept that you can have a war where you don't have actual literal fighting, and this is the trouble.

Most people say they see it, but they do not really act that way. I think everybody today in the military should be acting, should be doing things as if we were really at war. We have got to learn ways of doing things faster. I think it is almost too late. This is what I worry about.

The easiest thing to do in Washington when something goes wrong is to reorganize and from what I have seen in many years all that usually gets reorganized are the telephone numbers.

One of the main reasons for the success of the *Nautilus* project was that there were so many people who were certain the project would fail, and they did not want to be associated with it. * * * That was one of the most wonderful and fortuitous things that happened in our program.

Mississippi Native Next Tennessee Governor

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. SMITH of Mississippi. Mr. Speaker, we in Mississippi are proud of the fact that Buford Ellington, recently nominated as Democratic candidate for Governor of Tennessee, is a native of Mississippi. The people of Holmes County, Miss., are especially interested in Buford Ellington's career. They are confident that he will make a great Governor of our great neighboring State, because of the confidence they have in Governor Ellington's fine parents, Mr. and Mrs. A. E. Ellington.

Under unanimous consent, I include an article about Mr. and Mrs. Ellington from the Four County News:

BUFORD ELLINGTON'S HOLMES COUNTY PARENTS HAPPY OVER HIS GUBERNATORIAL VICTORY

Since Buford Ellington was elected Governor of Tennessee Thursday, life at his old homeplace in the Bethesda community in Holmes County has been busy and exciting for his happy parents, Mr. and Mrs. A. E. Ellington.

At the attractive white frame house, located on a high point with a commanding view of the surrounding country, phone calls and visitors have been constant.

Things were so happily hectic that when this reporter asked them Monday how long they had been married, they looked at each other and burst out laughing—this was their 54th wedding anniversary and in the excitement they had forgotten it.

The Ellingtons have lived in the Bethesda community, 8 miles northeast of Lexington and 8 miles northwest of Durant, their whole lives, and have been on this farm most of the 54 years of their married life.

Their son Buford, the oldest boy, finished Bethesda school, says his mother, and then on the advice of Millsaps school officials went on to Holmes at Goodman. Back in the old record book at the school, Buford Ellington is listed as having graduated from Holmes Agricultural High School in 1926. He then went on to finish at Millsaps.

UP ALL NIGHT

"We sat up all Thursday night listening to the returns," said Mr. Ellington, and Mrs. Ellington said that it wouldn't have done any good to go to bed, since they couldn't have slept anyhow.

"We've been swamped to death," laughed Mr. Ellington. "I'm supposed to be in the field cutting hay right now." Mr. Ellington is 74. He had already been out working the garden that morning.

He's still active on the farm, as the foregoing illustrates, which he operates in partnership with his middle son, Irby, of Lexington. "Irby has breakfast with us every morning except Saturday and Sunday and works here until noon and then goes into town to his gas station," explain the Ellingtons.

THREE SONS

The third son is Leonard, 43, who is with the Clewiston Motor Co., Caterpillar dealer in West Palm Beach, Fla.

Irby attended Durant High School 1 year and attended Holmes for a short while. Mr. A. E. Ellington and Irby have 125 cows on their place.

Getting back to the big topic of the moment, Buford's election as Governor, Mr. Ellington was asked if he was ever in politics.

"No, man." was his emphatic reply.

How did Buford become such a successful politician?

"He was a natural born politician, from the time he was a baby," recalled his parents, remembering his taking part in all activities and fitting in well. Asked about any sports he played, his mother said that he played basketball but he wasn't a real basketball player. "Now Irby was the basketball player," she said. That brought another thought to her mind.

PROUD OF ALL BOYS

"The two other boys are just as good boys as Buford—all three of them have made us very happy. I'm proud of Buford, and I'm proud of Irby and Leonard, too. We have the finest daughters-in-law a person could ask for, too," she said. "Leonard is the best church worker," she said.

The Ellingtons have both lived in the Bethesda neighborhood all their lives, and have belonged to the Bowling Green Methodist Church for 54 years. Dr. A. I. McIwain, of Jackson, is the pastor there now, and they say he is the best in Holmes County.

They live at the extreme western end of district 2, and get their mail on route 2 out of Durant. They have electricity and a telephone and all modern conveniences in their pretty home.

PRETTY COUNTRY

On the road up to their house, rock outcroppings form the base of the good gravel roads in places, and crystal clear streams in deep beds flow over sandy bottoms. The country is very hilly, and is similar to mountain foothill country. From his favorite sitting place under a tree in the front yard, Mr. Ellington has a wonderful view of the country in all directions.

In the past, Mr. Ellington said that he has done some truck farming, but now is concerned mostly with cattle and timber.

A fact that makes their son's Buford election more unusual than ever is the fact that he has been in Tennessee only about 20 years.

Some Tennessee papers had just come in Monday. One showed a picture of a crowd of 40,000 at a Memphis rally, called one of the largest crowds ever. Another was the Nashville Banner of Friday with the big headlines, "Ellington Wins It" in huge letters across the front, and several pictures of Buford sweating out the election returns.

"We don't feel like we deserve all this publicity," Mrs. Ellington said modestly, but friends in Holmes County feel differently, they feel that they do.

Soviet Propaganda

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BEAMER. Mr. Speaker, for some time our office has ben receiving propa-

ganda from the U. S. S. R. Embasy. It is quite different from informative material that comes from other embassies but we felt that freedom of speech and freedom of the press are two cardinal principles in this country. For this reason, we made no particular comment in our office and made an attempt to read this material as it came from that source.

I now have received a leter from one of the newspapers in the Fifth Indiana District advising me that they too have been receiving the press releases from the Soviet Embassy. They complain bitterly at the type of propaganda that this embassy has been circulating and, furthermore, that they are permitted to pay only 3 cents per piece of mailing matter which costs the postal department many times that much to handle.

The newspaper editor in returning this particular piece to me said that it cost him 8 cents to send it first class and the Russian Embassy apparently was paying only 3 cents.

Thus, it seems that a subsidy is being given to those who would attempt to undermine us or who at least are not hesitating to be severely critical of our President, our Congress, and our people in these press releases.

Does it not seem that this is going far beyond freedom of speech and freedom of the press? They would not tolerate even this much propaganda coming out of our embassy in Moscow, and I am wondering why it is necessary to permit it in our free land.

A Hoosier Point of View

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. BRAY. Mr. Speaker, we have seen in the last half century a rapidly increasing belief in the powers of governments—at all levels—as being the best medium for settling all of the conflicts and differences in our lives. Many of us—and this is particularly true of Hoosiers—have felt that this attitude demands too much of government, and is bought at too great a price. I doubt that all-powerful governments are the best means of solving all of the problems of day-to-day living, and I am sure that such endeavors would necesarily be accompanied by severe restraints of those liberties we cherish.

Without denying the rightful duties and responsibilities of governments, it is worthwhile to remind ourselves that many problems can and should be solved without recourse to legislation or sovereign decree. In this light I was particularly impressed by recent remarks of Mr. Dallas Sells, president of the Indiana State AFL–CIO. His comments, as they appeared in the July 25, 1958 issue of the Leader, weekly publication of the Indiana State AFL–CIO, follow:

THE PRESIDENT'S COLUMN
(By Dallas Sells)

Aldon C. Palmer, insurance commissioner for the State of Indiana, in a statement prepared for the Indiana Hospital Association, recommended State regulations of hospital rates. While we agree that hospital rates are too high because of some added costs that should not be borne by the patient, we question State interference in this field just as we oppose State interference in the free and democratic collective bargaining processes of labor-management relations.

One thing is certain, if the administrators of hospitals that are service social institutions and not business enterprises, do not assume their full responsibilities in this area, some other group will assume the authority.

In Pennsylvania recently, the insurance commissioner gave the authority to the Blue Cross. We think the hospital association should, in cooperation with the proper medical groups, work with citizen groups to resolve this issue. The health and welfare of the citizens of Indiana are at stake.

National Education Association Studies of Local Property Taxes and Public Schools

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. NEUBERGER. Mr. President, one of the most convincing arguments in favor of Federal aid to schools is the way the local property tax is breaking down as an adequate and fair means of financing school construction and operation.

A most thorough and exhaustive study of this development has been published by the National Education Association, as prepared by Dr. R. L. Johns, head of the department of educational administration at the University of Florida.

I ask unanimous consent that Dr. Johns' informative study, entitled "The Property Tax and Public School Financing," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROPERTY TAX AND PUBLIC SCHOOL FINANCING
(R. L. Johns)

There is evidence all around us that we face a major financing problem in providing for an adequate program of public education in the decade ahead. The attainment of the American ideal of equality of opportunity—even national survival—may well depend upon a major policy change in educational expenditures.

At present our school financing policies show several major defects:

1. The Federal Government has followed the laissez faire policy of let the States do it.

2. Some of the States have followed the policy of let the local districts do it including those districts which do not have the wealth to do the job.

3. Many districts have followed the policy of keeping tax rates low while many others are prevented from financing their schools either by poverty or by State restriction on the property tax.

The net effect of these policies and conditions in many districts has been to spend as little as we can rather than what it takes to finance an adequate program of public education. Furthermore these policies have resulted in placing 54 percent of the financial burden of supporting schools on the property tax. The purpose of this pamphlet is to analyze the effect on school financing of using the property tax as the principal source of school revenue.

THE YEARS AHEAD

Let us first take a look at the problem of school financing in the next 10 years. The Committee for the White House Conference on Education studied this problem in 1955 using data for 1953–54. At that time educational expenditures totaled approximately $9 billion. After studying the status of education and educational needs, the Committee estimated that educational expenditures would need to be doubled and increased to $18 billion during the succeeding 10 years.

Events during the intervening years now make it evident that this estimate was much too low. The educational program envisioned by the Committee cannot possibly be achieved without at least doubling the per pupil expenditures for education. This is quite different from doubling the total expenditures because of the rapid increase in school population.

In 1956–57, the revenue receipts available to the public schools totaled approximately $10,220,000,000, or $316 per pupil enrolled. School enrollment is increasing approximately 1,200,000 per year. Assuming that the school enrollment will be 44,338,688 in 1966–67, it would require $26 billion to provide $632 per pupil in revenue receipts for 1966–67. The doubling of per pupil expenditures would provide an average teacher salary of $8,440. Many authorities believe that it would require an average salary of this amount to provide the type of teacher needed in the public schools. Further decreases in the purchasing power of the dollar and other events by 1966–67 may subsequently prove even this estimate to be conservative.

ECONOMIC GROWTH

With this financial picture before us, can we possibly expect the property tax to provide 54 percent of the school revenue in 1966–67? The schools received approximately $5.5 billion from the property tax in 1956–57. Can we expect the property tax to provide more than $15 billion or 54 percent of the school revenue needed in 1966–67? In considering this problem it is advisable that we examine the types of taxes levied by all levels of Government, the sources of the income of the people, and the equity of the property tax as compared with other sources of revenue.

Taxes are levied by the Federal Government, State governments, and local governments other than schools and school districts. Table I presents some very interesting evidence concerning these taxes. (Table I shows only taxes levied by various levels of government, not expenditures.) There are many intergovernmental transfers of funds through grants in aid not shown in this table. But this table presents some pertinent information concerning the tax levying possibilities of the various levels of government.

Tax collections totalled approximately $93,570,000,000 in 1953 and the Federal Government collected more than $70 billion of this total.

DIFFERENT TAX SOURCES

The property tax raised 10 percent of all governmental taxes; 59 percent came from individual and corporation income taxes; 17 percent from various types of sales taxes; 8 percent from payroll taxes, and 6 percent

from all other taxes. Total taxes have increased considerably since 1953 but the percent derived from each source has changed very little. Therefore the percent derived from each source is of great significance.

The Federal Government derives none of its tax income from the property tax. The last time the Federal Government even attempted to levy a property tax was during Civil War days. State governments derive only 3 percent of their tax income from the property tax, local governments other than schools, 72 percent, and school districts 98 percent. Table I shows clearly that the tax levying possibilities of school districts, despite their heavy financial responsibilities, are far more limited than any other level of government. School districts are limited almost exclusively to the property tax and most states place severe restrictions on the amount of property taxes which can be levied by school districts.

TABLE 1.—*Tax collections of different levels of government 1953*

[In millions]

Type of tax	Total all governments		Federal Government		State governments		Local governments (excluding schools)		School districts	
	Amount	Percent	Amount	Percent	Amount	Percent	Amount	Percent	Amount	Percent
Personal income	$32,870	35	$31,800	45	$970	8	$100	2+		
Corporation income	22,410	24	21,600	31	810	7				
Other business	1,390	2			990	8	400	6		
General sales	2,730	3			2,430	20	300	5		
Liquor sales	3,520	4	2,780	4	540	4	200	3		
Tobacco sales	2,320	2	1,650	2	470	4	200	3		
Gasoline sales	3,060	3	890	1	2,020	17	150	2		
Other sales	4,970	5	4,620	7	250	2	100	2		
Auto license	1,040	1			1,010	8				
Customs	610	1	610	1						
Property	9,370	10			370	3	4,520	72	$4,480	98
Payroll	7,150	8	5,650	8	1,500	12				
Death and gift	1,110	1	890	1	220	2				
Miscellaneous and unallocated	1,020	1			620	5	340	5	90	2

Adapted from data given in American Public Finance, by William Schultz and C. Lowell Harris, Prentice Hall, p. 252, and Trends in Significant Facts in School Finance by Clayton Hutchins, Albert R. Munse, and Edna D. Booher, U. S. Office of Education, p. 21.

The property tax is one of the most unpopular. In most districts, property tax levies for schools must be approved by a vote of the people. School bond issues which are retired by property tax levies are also usually submitted for the approval of the people.

The Federal Government and State governments have access to the most popular types of taxes; none of these must be approved by popular vote. On the other hand, school boards must obtain most of their local revenue from an unpopular tax approved by popular vote. This situation is of great significance in appraising the practical possibility of school boards obtaining a significant portion of the additional funds needed in the next 10 years from the property tax. The reasons for public resistance to the property tax will become apparent in the following paragraphs.

SOURCES OF INCOME

All taxes must be paid from income of some kind. Therefore the taxing system should have some rational relationship to the sources of income of taxpayers. The sources of income have been changing substantially during recent years. Table II presents an analysis of the national income in 1929 and 1956: Although the national income has quadrupled during this period and although the amount derived from each source has increased, the relative amounts derived from different sources have changed greatly.

Compensation of employees in the form of salaries and wages comprised 58.2 percent of the national income in 1929 and it had increased to 70.2 percent in 1956. Corporate profits provided 11.5 percent of the national income in 1929 and 11.8 percent in 1956. All other sources of income declined between 1929 and 1956 in terms of percent of total income. Farm income declined from 6.8 percent of the total in 1929 to only 3.4 percent of the total in 1956. This is of particular significance to rural districts which rely heavily on the property tax on farms.

In 1956, compensation of employees, corporate profits, and the income of unincorporated businesses and the professions comprised 90.1 percent of the national income. These three major sources of income can be taxed much more readily and equitably by income taxes and sales taxes than by property taxes.

It is possible to tax other sources of income—farms, rental properties, and evidences of loans—by the property tax, but some authorities on taxation believe that even these sources of income can be taxed more equitably by nonproperty types of taxes. These last three sources comprised only 9.9 percent of the total national income in 1956 and 20.3 percent in 1929. Therefore the only components of the national income which bear any rational resemblance to the property tax are rapidly declining as a percent of the total income. Although the typical taxpayer may not be fully aware of these economic changes, he senses that the property tax is not a rational tax and, therefore he resists it.

TABLE II.—*Sources of national income,* [1] *1929 and 1956*

[In millions]

Source	1929		1956	
	Amount	Percent	Amount	Percent
Compensation of employees	$51,085	58.2	$241,372	70.2
Corporate profits	10,100	11.5	40,449	11.8
Unincorporated business and professional income	8,791	10.0	28,017	8.1
Farm income	5,968	6.8	11,600	3.4
Rental income of persons	5,425	6.2	10,322	3.0
Net interest	6,445	7.3	11,860	3.5
Total	87,814	100.0	343,620	100.0

PRINCIPLES OF TAX EQUITY

Different types of taxes can be analyzed in terms of certain generally accepted principles of tax justice or equity.

Ability to pay: The most commonly accepted principle of taxation is ability to pay. The ethical justification of this principle is that the proportional sacrifice of one person for supporting government should not be greater than another. The progressive income tax best satisfies this principle because the greater a person's or corporation's income the higher the rate of taxation. It is the opposite of a regressive tax which weighs more heavily, proportionately, on those of least wealth.

The property tax rates very low according to this principle because the taxpaying ability of people is but poorly reflected by property. One example is sufficient to establish this point: When a man goes into debt to buy a home, he immediately increases his tax liability although there is no increase in his income.

Benefit: Also used to evaluate types of taxes is the benefit principle. This means that taxes on person and property should be scaled in proportion to benefits received from government. Schools, of course, increase the value of property but persons benefit more from schools than property. People can be taxed more equitably by income and sales taxes than by property taxes.

Various criteria: Many other principles of taxation and several criteria have been advocated, including adequacy of yield, flexibility of yield, adapability, ease of administration, cost of administration, ease of payment, and stability. The only one of these criteria on which the property tax rates high is stability. All of the major sources of tax revenue listed in table I, rate higher on most of these criteria than the property tax. The typical taxpayer may not know the canons of tax equity but his sense of justice is offended by excessive property taxes. Therefore he resists large increases in property taxes.

ADVANTAGES OF PROPERTY TAX

In should not be inferred from this line of reasoning that the property tax should be abolished as a means of school support. There are many reasons why the property tax should continue to be one of the important sources of school revenue. The most important of these is to provide a degree of freedom in decisionmaking for local school administrative units, a vital factor in preserving experimentation and innovation in the public schools of America.

A local school administrative unit cannot carry out many important decisions affecting educational programs unless it has the power to obtain local revenue in addition to the amounts provided from other levels of government. The property tax is about the only substantial source of local revenue available to local school administrative units. Therefore, the provision of local home rule necessary for innovation and experimentation is sufficient reason to continue the ad valorem tax as an important source of local school revenue.

Much can be done to improve the yield of property taxes levied for school support. Assessment practices should be improved. Constitutional and statutory restrictions should not limit property taxes which can be levied for schools. There are unnecessary restrictions in the qualifications of electors voting for property taxes. And in some cases, the majorities required to vote for a tax or a bond issue are excessive.

NATIONAL ECONOMY

In conclusion, it might be feared by some that the national economy could not stand the expenditure of $28 billion for the public schools in 1966–67. At present, only 3 percent of the national income is spent for the public schools. To double educational expenditures with no increase in national

income per capita would require 6 percent of that income. But the per capita national income is rising and by 1966–67 it would not require 6 percent of the national income to provide $38 billion for the public schools.

The U. S. S. R. reportedly spends 6 percent of its national income on public education. Within 40 years, the Soviet Union has lifted itself from a nation largely illiterate with a medieval culture to a highly literate, productive, and powerful nation. Education has been the principal means by which that accomplishment has been made possible.

GREATER FINANCIAL EFFORT

Unless the United States of America chooses to become a second or third class nation, it must make as great or greater financial effort to support public education as that proposed in this booklet. In order to do so, our school-financing policies must undergo a major change both in the amount of revenue provided and the sources of that revenue.

The property tax can no longer be the principal source of school revenue. The Federal Government and State governments are in a much better strategic position than school districts to tax the major sources of national income.

Therefore the Federal Government should abandon its present policy of stopgap, trivial appropriations for public education. The national interest demands that the Federal Government adopt a policy of providing substantial financial assistance for the public schools.

The States should make further expansion and further improvements in their programs of State support.

Local governments should improve the administration of the property tax and in many districts increase the yield from that source.

But the major increases in school revenue during the next 10 years should be provided by the Federal Government and the State governments.

Cleaning Up Veterans' Fund Raising

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. TEAGUE of Texas. Mr. Speaker, under leave granted me to extend my remarks, I include the text of an editorial in the New York Herald Tribune of August 15, 1958, concerning the activities of the Veterans' Affairs Committee of the House in regard to its investigation of fund raising by veterans and veterans' organizations.

I believe the Members of the House, including those who had some doubt as to the wisdom of this investigation, will find the editorial pertinent and invaluable. The report of the committee has been designated House Report No. 2546 and the legislation to correct the abuses which we found is H. R. 13689:

CLEANING UP VETERANS' FUND RAISING

One observation by the House Veterans Affairs Committee, which has been investigating all sorts of fund-raising activities, good and bad, by veterans' organizations, will hit the spot with a lot of people:

"No good reason is seen why the general public should be annoyed and burdened by the receipt of unordered merchandise for which they are expected to make payment or go to the trouble of returning."

As regards this practice, the committee urges a law which would require that at least half of the gross receipts must be devoted to stated charitable purposes.

Furthermore, the lawmakers feel that people wouldn't be quite so generous with some of the money-seeking programs if they knew what a small percentage funneled down to charity.

Hence all-inclusive legislation for stricter controls is recommended. Funds collected would be regarded as trust funds. Groups with congressional charter would have to make annual reports to Congress on their finances.

Certainly these are requirements to which no genuinely public-spirited organization can reasonably object.

Survey on Current Unemployment

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 15, 1958

Mr. DOUGLAS. Mr. President, recently the University of Michigan's Survey Research Center conducted a survey on current unemployment. The survey was devised and carried out largely by Prof. William Haber and Prof. Wilbur Cohen of the University of Michigan.

The survey is of such importance that I am asking unanimous consent to have it placed in the RECORD where all Senators may read it.

Mr. President, surveys such as this are of great importance. Too often we act without sufficient knowledge in areas such as unemployment. Too little information is available concerning the facts and attitudes of the unemployed. I can only hope that the University of Michigan will find it possible to continue this particular study, or studies relating to it, and I only wish that it had been available sooner than it was.

Mr. President, I commend this report of the study to my colleagues. The two men who were principally involved in setting it up and carrying it through—Professors Haber and Cohen—are men of great intelligence and judgment. The University of Michigan should be proud to have them as members of its staff. Both have worked long and diligently in this general field. Further, Mr. Cohen, whom many here know, is probably the most knowledgeable man in the country on the subject of social security. An expert in the field of social security may be defined as someone who knows Wilbur Cohen's phone number.

I therefore commend this report of the Haber-Cohen study to Members of the Senate and I hope that it will be just the beginning for further studies in this field. I ask unanimous consent that this be printed in the Appendix of the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

One in every four American families felt the recession's impact through unemployment or shortened workweeks. But surprising optimism about individual economic prospects and business conditions generally prevails even among those still unemployed.

These findings of a nationwide study on unemployment were reported Sunday, August 10, by Profs. William Haber and Wilbur J. Cohen of the University of Michigan. Their conclusions are based on interviews with a random sample of 1,456 adults conducted by the University of Michigan survey research center during May and June.

Data obtained from the survey indicate that 12½ million families felt the recession's impact directly. In 8½ million families, the head or one other member was unemployed at some time between mid-1957 and mid-1958. Shorter workweeks affected an additional 4 million families. (See table 1.)

In 700,000 families, two or more members experienced unemployment.

Other highlights, in brief:

Length of unemployment: Those unemployed at the time of the survey averaged 21 weeks unemployment; those previously unemployed who had found jobs again by June averaged 11 weeks unemployment. (See table 2.)

Unemployment insurance coverage: Sixty percent of those unemployed at any time during the past 12 months received some unemployment benefits. Thirty percent received benefits during the entire period they were out of work.

Roughly a third of those who did not receive unemployment compensation never applied for their benefits, because the family head either felt he would not be unemployed long enough to make it worthwhile or that benefits were not enough to make it worthwhile to apply.

Income losses: After counting unemployment insurance benefits as income, unemployed families estimated their income losses as follows: Under $500, 38 percent; from $500 to $1,000, 25 percent; from $1,000 to $2,000, 25 percent; $2,000 and over, 12 percent. (See table 3.)

Impact by income groups: Unemployment was most widespread among families with 1957 incomes of $5,000 or less. Shorter work hours were most frequently experienced by those in the $5,000 to $7,500 income bracket. Taken together, these two factors had their greatest impact on families with 1957 income of $3,000 to $5,000. (See table 4.)

Impact by age: Unemployment during the past year was concentrated among younger members of the labor force. About 1 in 4 family heads under 30 were unemployed at some time during this period and nearly 1 in 10 were unemployed at the time of the survey. Only 13 percent of family heads aged 40 to 50 were unemployed at any time during the same 12 months. (See table 5.)

Measures taken by unemployed: Most families experiencing unemployment reported they piled up bills (26 percent), borrowed money (22 percent), or got help from relatives (21 percent). Some moved to cheaper quarters (11 percent) and 4 percent were on relief.

In addition, some people said they withdrew savings and cut down on buying. A few reported that another member of the family went to work, or that they sold their car or other durable goods. About 1 in 5 families reported they took no steps to adjust to their income loss, but many families took more than 1 measure. Two-thirds of those employed less than 8 weeks took some measure to make ends meet; for those unemployed 9 weeks or more, this proportion was 84 percent.

Job expectations of unemployed: Many of those unemployed at the time of the survey had optimistic hopes for the future. One-third felt confident they would get their old job back soon or they could find another job with equal pay. Slightly more than a third felt their chances of getting another job with

equal pay was bad. The remainder were uncertain.

Economics attitudes of unemployed: Unemployed persons are only slightly more pessimistic about the economic outlook than those who have jobs. Although 25 percent of the heads of families unemployed at the time of the survey felt that another major depression like the thirties could happen, 55 percent felt a major depression unlikely.

Sixty percent of those currently unemployed believe business conditions will not be any worse a year from now than they are at present. On the other hand, only 27 percent felt there will be good times during the next 12 months.

Heads of families who found new employment and were no longer unemployed were even more optimistic. Eighteen percent felt that a major depression could happen, while 67 percent felt that it was unlikely. Nearly half thought there will be good times during the next 12 months.

Those who are unemployed now, or who have been unemployed during the past 12 months, express a desire to buy some new appliances, to make repairs on their home, or some other major expenditure, as frequently as employed people. Ten percent of those who are now unemployed say that they expect to buy a car in the next year. Of those people who were not affected by the recession, only a few percent more indicated that they planned to buy a car in the coming year.

Unemployment in Detroit: A special series of interviews with unemployed Detroit workers showed interesting differences from national patterns.

Out of all those in Detroit who were unemployed during the year from June 1957 to June 1958, a much larger proportion were still unemployed at the time of the survey than were still unemployed in the rest of the Nation.

The duration of unemployment in Detroit also has been appreciably longer than in the rest of the Nation. As a result, income losses due to unemployment and shorter work weeks appear more severe in Detroit than the rest of the United States. These losses occurred even though a larger proportion of Detroit's unemployed were covered by unemployment insurance than was true for the country as a whole.

Even though their economic losses were above average, more of Detroit's unemployed felt they had a good chance of getting back their old job or finding a new one with equal pay than was true for the rest of the country.

Unemployed Detroiters also felt slightly more optimistic about business conditions than unemployed elsewhere—almost half those interviewed felt there would be good times in the coming year.

Commenting on the findings, Professors Haber and Cohen said:

"While a larger proportion of American workers have been affected by this recession than at any time since World War II, the amazing thing is that a generally optimistic attitude continued to prevail, in spite of large economic losses.

"We believe this is due in part to the more significant role of unemployment insurance than in previous recessions.

"It is, undoubtedly, also due to the fact that most people, including the unemployed, felt there was little likelihood of a severe depression and the belief of many that their chances of obtaining another job were good, should they become unemployed.

"To a large extent, the built-in stabilizers of our economy, developed during the past 25 years, gave assurance that the recession would not develop into a depression.

"While unemployment insurance during this period made up a larger proportion of the national wage loss than in any previous period, it is still clear that, unless further permanent improvements in unemployment insurance are made, both in terms of amount and duration of benefits, unemployed workers are still subjected to severe economic losses during layoffs."

Commenting on the study itself, they said:

"This is an important new area of research for the university. Survey research has been extended into three new areas with this study: (1) Rather than obtaining a series of static pictures of unemployment, experience with unemployment over a period of 12 months has been studied; (2) unemployment in families has been measured, in addition to individual unemployment; and (3) data have been collected on how greatly hurt the unemployed feel and how their attitudes and expectations were affected.

"This data will be a useful supplement to information currently available from the Government, which records only the number of persons currently unemployed and does not measure the dynamic impact of unemployment over longer periods of time.

"Data obtained in the University survey on current unemployment corresponds closely with data from the Bureau of the Census on unemployment at the time of our interviews. This adds reliability to the new data obtained in our study."

Questions for the Haber-Cohen study were included as part of the University of Michigan Survey Research Center's survey of consumer attitudes and intentions to buy. George Katona, Eva Mueller, James Morgan, and Vivian Kleinman of the survey research center staff assisted in the project.

The study was made possible through the cooperation of the coordinating committee on social welfare research of the university, of which Dean Fedele F. Fauri of the school of social work is chairman, and its committee on income maintenance and social security, headed by Professor Cohen.

The Institute of Labor and Industrial Relations, Wayne State University-University of Michigan, and the University of Michigan Department of Economics assisted the project through Professor Haber and Ford Foundation faculty research funds. Martin David served as research assistant.

Professor Cohen was director of research and statistics for the Social Security Administration prior to his University of Michigan appointment in 1956. Professor Haber is a member of the Federal Advisory Council on Employment Security.

Complete findings of their study are expected to be available this fall.

TABLE 1.—*Extent of unemployment, shorter working hours*

	Percent
Head of family unemployed at time of survey	5.5
Head of family unemployed during past 12 months, but employed at time of survey	7.9
Family member other than head unemployed during past 12 months	3.0
Total families affected by unemployment	16.4
Head of family working shorter hours	8.1
Total families affected by unemployment, shorter hours	24.5
Head of family employed	40.9
Head of family self-employed	15.2
Head of family not in labor force	14.9
Unemployment, shorter hours not ascertained	4.5
Total families not affected by unemployment, shorter hours	75.5

NOTE.—Since it was not possible to obtain information which would indicate the losses which self-employed persons suffered from business conditions during the recession, these figures underestimate the full impact of the recession on United States families.

TABLE 2.—*Duration of unemployment for heads of families*

Number of weeks unemployed	Currently unemployed	Currently employed, but unemployed during past 12 months	Either
1 to 4 percent	8	23	17
5 to 13 do	23	46	37
14 to 26 do	37	27	31
27 to 39 do	21	4	11
40 to 51 do	5	0	2
52 or over do	5	0	2
Total	100	100	100
Average duration of unemployment weeks	21	11	15

NOTE.—The period for which heads of families actually will remain unemployed are understated by this table. Those who are now back at work are the more fortunate and more able whose period of unemployment would be less than average under any circumstances. Many of those who were still unemployed in June undoubtedly remained unemployed for some time after the survey; hence, the average duration of unemployment of those who were unemployed at the time of the survey will continue to rise. As a result, this table presents minimum estimates of duration of unemployment.

TABLE 3.—*Income losses after unemployment insurance benefits, estimated by unemployed families*

	Percent
Under $500	38
$500–$999	25
$1,000–$1,499	17
$1,500–$1,979	8
$2,000–$2,499	4
$2,500–$3,499	5
$3,500 and over	3
Total	100

NOTE.—This table excludes those who were not able to give a numerical estimate of their income loss.

TABLE 4.—*Unemployment by 1957 family income groups*

[Percent]

Head of family	Under $3,000	$3,000 to $4,999	$5,000 to $7,499	$7,500 and over	All incomes
Is currently unemployed	8	7	3	3	5.5
Was unemployed during year	9	11	8	4	7.9
Total unemployed	18	18	11	7	13.4
Is or has been working shorter hours	4	11	10	7	8.1
Total affected	22	29	21	14	21.5
Not affected by unemployment or shorter hours	78	71	79	86	78.5
Total	100	100	100	100	100.0

NOTE.—1957 income may have been affected by unemployment or shorter hours in the last quarters of 1957.

TABLE 5.—*Unemployment by age groups*

[Percent]

Head of family	Under 30	30 to 40	40 to 50	50 to 65	Over 65	All ages
Is currently unemployed	9	6	5	6	3	5.5
Is currently employed, was unemployed earlier in the year	15	10	8	6	1	7.9
Total unemployed	24	16	13	12	4	13.4
Was or is working shorter hours	14	10	9	9	(1)	8.1
Total affected	38	26	22	21	4	21.5

[1] Less than 0.5 percent.

His Finest Hour

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an excellent editorial which appeared in the Nashville Banner on Thursday, August 14.

The President of the United States in his address before the General Assembly of the United Nations was at his best. His six-point program to bring peace to the Arab world should receive the close study of the General Assembly and certainly the free world should understand our position and desire for peace everywhere.

The President's speech could, indeed, have been his finest hour.

The editorial follows:

HIS FINEST HOUR

Nothing could be clearer than America's position on peace, security, and progress in the Middle East, as President Eisenhower yesterday defined it. And if U. N. does not move to implement it in full consciousness of duty and opportunity it will be defaulting on an obligation which no member land of conscience can deny.

Only the blind could fail to see the line sharply drawn between this presentation of fact and principle—assertive of security guarantees for the small nations—and the wild mouthings of Gromyko to the effect that this constitutes "aggression." That Mr. Eisenhower in paragraph after paragraph scored a direct hit is evident from the source of the yelps.

As he said, "If it is made an international crime to help a small nation maintain its independence, then indeed the possibilities of conquest are unlimited. We will have nullified the provisions of our (U. N.) charter which recognizes the inherent right of collective self-defense. We will have let loose forces that could generate great disasters. The United Nations has, of course, a primary responsibility to maintain not only international peace, but also security."

To that fact, bearing directly on the call to this assembly, the President's message was addressed. Along with it the corollary principle of self-determination by the peoples—in this case the Arab nations—whose survival as independent, national entities, is at stake.

That is not a revised position of the United States. A common principle has guided this policy; notably, that "aggression, direct or indirect, must be checked before it gathered sufficient momentum to destroy us all—aggressor and defender alike."

In redefining this concept, the Chief Executive minced no words. "I would be less than candid," he said, "if I did not tell you that the United States reserves, within the spirit of the charter, the right to answer the legitimate appeal of any nation—particularly small nations."

That occurred in the case of Lebanon, immediately at hand. Simultaneously, however, the United States appealed to the U. N. to assume the patrol task for which these troops were sent. That was blocked by a Soviet veto.

The Arab countries assuredly know America's concern for the sovereignty for which they are striving—the consideration, that is, for legitimate undertakings to that end, and the respect for aspirations that do them credit. No leader among them, or alliance of leaders, could have read into this message a sinister design. On the contrary, it was a declaration of concern for their freedom, and with that a formula for joint action to help build, under their auspices, an economic structure meeting their primary human needs.

Again it is pertinent to quote the President: "A true Arab renaissance can only develop in a healthy human setting. Material progress should not be an overriding objective in itself; but it is an important condition for achieving higher human, cultural, and spiritual objectives."

That is adequate answer to the Soviet allegation that along the Communist road lies progress from want and misery. It is the assurance of deeds, along with words. For Mr. Eisenhower not only introduced it as a topic; he presented the means to that end.

A peace program indeed; a framework of policy and action by which both clouds and tension could be lifted from an apprehensive world in the knowledge that mankind collectively was striving to banish the conditions that make for war. When development and human progress are the objectives, and strength exists to combat mutually the inroads of conspiratorial assault, it would be a gain for the very purpose for which the U. N. exists.

There are six major elements in the program yesterday laid down: (1) United Nations concern for Lebanon; (2) United Nations measures to preserve peace in Jordan; (3) an end to the fomenting from without of civil strife; (4) a United Nations Peace Force; (5) a regional economic development plan to assist and accelerate improvement in the living standards of the Arab peoples; (6) steps to avoid a new arms race spiral in the area.

They are points belonging together—to be considered as a whole, understanding that as a U. N. responsibility one objective cannot wholly succeed without the other.

It needs to be stated again and again, that this world of individual nations is not going to be controlled by any one power or group of powers. It is not going to be committed to any one ideology. We must be, by the very nature of the case, a world community of sovereign powers, and of open societies.

That solemn note concluded the President's speech: "We must then seek with new vigor, new initiative, the path to a peace based on the effective control of armaments, on economic advancements and on the freedom of all peoples to be ruled by governments of their choice. Only thus can we exercise the full capacity God has given us to enrich the lives of the individual human beings who are our ultimate concern, our responsibility, and our strength."

The President excelled himself in what probably was the greatest speech of his career. The depth of his convictions, the breadth of his appeal to conscience, realism, and courage, the vigor of his presentation—no wonder he stands as the personal symbol of his Nation and the figure of leadership in the free world.

It was his finest hour.

Judge Eugene McGarry, of the Old School, Not Forgotten

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. LIBONATI. Mr. Speaker, Judge Lou Eugene McGarry died the other day, February 24, 1958, at 4:30 p. m., just like a real lawyer would wish it. In a profound sleep, in the place he loved, in his law office.

He started out as a lad around his father's boiler works, in the early nineties, and did well. Then, as a young man, he went off to the Spanish-American War. He came back, got married. Studied law at night school and became a lawyer. He specialized in the criminal practice. Judge McGarry had 10 children and he reared them well. Lou was a real father and proud of his family. One boy, Joe, now a colonel in the Air Corps, served in World War II; with honor, and all the children married. He had 32 grandchildren and 8 great-grandchildren. His lovely mate died 15 years ago.

All in all, he was versatile and clever. He knew every trick and kept the prosecution in trouble all the time. We all learned things from Lou.

Congressmen EMMET BYRNE and BARRATT O'HARA were numbered among his good friends. The camaraderie around the criminal court building was something to talk about in the old days. Great prosecutors and the best of the criminal defense matched wits and maneuvered about on the legal field of battle, as knights of old.

The fellows were around the criminal court one day and talking of days gone by. How men thought of things a little differently than they do now. And then one perked up, it was an old courtroom fan, a curbstone bard, and strictly between the two of us, he mentioned a lawyer whose name was Lou.

Said he:

This fellow was fast on the lip and words flowed like a Texas well. He splintered the air with his vibrant talk and the juries were under his spell. He breezed right through a murder trial and gave the State just 'ell. He knew how to talk to juries, the kind that

had only heard the school bell. (The hifalutin' guys were too busy to serve a spell.)

Those days are over now; people got smarter with the newspapers, radio, and television giving the straight information. Schooling, too, is more to the reading and writing side. People have better training. But in the old days, Lou was the best.

He was a popular person and the people elected him to a judgeship. He was crossed up in a big political fight and the party did not reslate him. He ran as an independent and lost—but nearly 300,000 voters said Lou was a good judge—but the party beat him.

After leaving the bench he was placed by Democratic Party Leader Joseph Gill in the recorder's office as a lawyer in the title section, retiring after 10 years.

He returned to his old love, the criminal court. He was one of the best brief writers of appeals to the Supreme Court, and one of his briefs so impressed the Supreme Court that his contentions as to the archaic nature of its operation resulted in a complete rewriting of the Habitual Criminal Act of the State of Illinois. I know, because I introduced and passed the law, together with Representative Burhans of Peoria, he in the house and I in the State senate, under the advisory guidance of Chief Justices Daley and Schaefer of the Supreme Court of the State of Illinois.

He practiced law for a while—and everybody was glad to help him. He came into my office. He died there the other day, and the legal fraternity gave him a good sendoff to his Maker.

In attendance were members of the criminal court press, George Wright, Chicago Daily Tribune; Art Summerfield, Chicago Daily News; and others; together with the distinguished lawyers of the civil and criminal bar, Crane, McDonald, Bieber, Brodkin, Bellows, Petrone, Stewart, Nicosia, Love, Bulger, Brody, Mallerdino, Busch, Meyers, the Devine brothers, Schultz, Barbaro, Scalise, the Stillo brothers, and Altieri.

Among the outstanding members of the bench attending were O'Connell, Dougherty, Butler, Crowley, Hartigan, Lupe, Sbarbaro, Pope, Cilella, Barth, Geroulies, Cornelius Harrington, Morrissey, Quilici, Green, Dunne, McDermott, Chelos, Drucker, McSweeney, Kula, McCormick, Covelli, Austin, Weiss, Padden, Casey, Normoyle, Wells, Dempsey, Barry, Robson, Holmgren, Roberts, Kluczynski, Ward, Burke, Bicek, Tucker, Leonard, Kiley, Touhy, Lyons, Adesko.

Do not worry about Lou—he did more than his share to make men a happier lot. He fought all the way, and strictly among these lawyers they said that goodhearted Lou was one of the greatest lawyers of his time. So we who knew him say "Ditto". And the Good Lord will see to it that he makes the Gate to the Promised Land. We all are proud that we knew Lou, and his good friends just ask in their prayers that he travels the road to Kingdom Come a little light.

God is good and sees in man His likeness. And Lou was a real servant to the end.

Indian Education Study

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. HALEY. Mr. Speaker, on July 28, 1958, I asked the Commissioner of Indian Affairs what progress had been made during the past 2 years in the implementation of Public Law 702, 84th Congress.

Public Law 702, sponsored by Representatives RHODES and UDALL, of Arizona, and Senator GOLDWATER, authorized and directed the Secretary of Interior to conduct a study and investigation on Indian education in the United States and Alaska. I am disappointed to learn that although preliminary steps have been taken the program has not yet gotten underway. Thirty years have elapsed since the last comprehensive study of Indian education was made and another is sorely needed. I sincerely hope sufficient funds will be made available during the 86th Congress to permit this study to be made. The Bureau of Indian Affairs, under the able direction of Commissioner Emmons, has an outstanding record of performance and service. I believe the Bureau should be given the necessary appropriation to enable it to make this important study.

Commissioner Emmons' letter dated August 8, 1958, follows:

UNITED STATES DEPARTMENT
OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
Washington, D. C., August 8, 1958.

Hon. JAMES A. HALEY,
Chairman, Subcommittee on Indian Affairs, Committee on Interior and Insular Affairs, House of Representatives, Washington, D. C.

DEAR MR. HALEY: We are pleased to comply with your request of July 28, for a progress report and information with respect to the survey of Indian education authorized by Public Law 702, 84th Congress. Although the intent of the Congress to have such a survey made is clear, the act has never been implemented because we have been unable to secure the necessary appropriations to do so. Funds to carry out the survey were included in our 1958 budget request, but since other projects in the judgment of the Congress had a higher priority, moneys were not appropriated for this survey.

The purpose of Public Law 702 was to have a survey made to study Indian education in the United States, including an investigation of the education problems of Indian children from non-English-speaking homes, and the possibility of establishing a more orderly, equitable, and acceptable program for transferring Indian children to public schools. The Bureau developed preliminary materials for the planning and managing of the survey. However, lacking adequate funds, this was the extent of our participation.

The last comprehensive study of Indian education was made in 1928 in connection with the Meriam survey made by the Institute for Government Research. Although there have been several surveys and studies made since that time, there is nothing of a comprehensive nature that can be compared to the Meriam study of 1928. A comprehensive survey such as that authorized by Public Law 702 would be helpful, and with that legislative authority we hope it may be possible, when funds become available, to carry out such a study sometime in the not distant future.

Sincerely yours,

GLENN L. EMMONS,
Commissioner.

Indian Adult Vocational Training Services

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. HALEY. Mr. Speaker, when Public Law 959 was enacted during the closing days of the 84th Congress, I stated that it was perhaps the most important and far-reaching piece of Indian legislation processed by the Committee on Interior and Insular Affairs during the 84th Congress. Introduced in the House by Representatives EDMONDSON, UDALL, and BERRY, and in the other body by Senators YOUNG THYE, CHAVEZ, MUNDT, and GOLDWATER, legislation culminating in Public Law 959 authorizing the Secretary of Interior to undertake by contracts or agreements with any Federal, State, or local governmental agency, vocational training school, corporation or association, a program of vocational training for Indians to help them obtain employment.

I am pleased to insert in the RECORD a letter from Assistant Secretary of the Interior Ernst which presents a progress report on the implementation of Public Law 959. The letter follows:

UNITED STATES DEPARTMENT
OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., August 12, 1958.

Hon. JAMES A. HALEY,
Chairman, Subcommittee on Indian Affairs, Committee on Interior and Insular Affairs, House of Representatives, Washington, D. C.

DEAR MR. HALEY: Your letter of July 28, 1958, requested information about the Bureau of Indian Affairs' adult vocational training services program authorized under Public Law 959. The following is a brief summary of progress made in the program to date.

Full-time institutional vocational training is now available in the 10 area offices of the Bureau of Indian Affairs and in 8 field relocation offices at Chicago, Ill.; Cincinnati and Cleveland, Ohio; Dallas, Tex.; Denver, Colo.; Los Angeles and Oakland, Calif.; and St. Louis, Mo. Applications are being taken for adult vocational training services at agency and other similar Bureau offices.

Since January 1958, there have been 165 various occupational courses approved, involving approximately 65 different schools. As of June 30 of this year, 376 Indians had entered vocational training under the act, either at the field relocation office destination or at the area office location. Of this number, 37 trainees have discontinued training for various reasons. As the program has been underway only a short time, just four have completed the training. Beginning July 1 of this fiscal year, a total of 325 ap-

plications were on file for processing. Of this number, 115 have been primarily selected and 137 have been finally selected. Of this latter number, 118 have already departed for their training destination.

The Bureau has staffed each of the offices where training is available with qualified training officers who are assisting the applicants with the necessary counseling relative to the appropriate training objective they should pursue. Grants of financial assistance covering tuition and related costs, and other necessary items, are being furnished to the participants in the program as their needs require.

To carry out this work, $1,500,000 was appropriated for fiscal year 1958 and, as stated above, at the close of the fiscal year, 376 heads of families and single individuals were enrolled in approved courses of adult vocational training. Most of these persons entered training during the months of April, May, and June 1958. The courses of training being pursued range from 6 to 24 months in length, with an average duration of about 12 months.

For fiscal year 1959, $2,830,000 was appropriated to carry on and expand the program. With these funds, we will be able to continue in training the persons who entered late in fiscal year 1958, and we expect to provide services to 670 additional trainees.

We believe the interest in the program expressed by the number of Indians participating and the inquiries that have been made about it is exceedingly good and indications are that the program is gaining momentum as knowledge of the opportunities afforded by it are known. We are pleased with the reception this program has obtained from the Indians and with the progress that is being made.

Sincerely yours,

ROGER ERNST,
Assistant Secretary of the Interior.

Ike's Good Press

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Richmond (Va.) News Leader of August 7, 1958:

IKE'S GOOD PRESS

Although President Eisenhower might be the first to deny it, he has received what any public relations consultant would call a "good press." To be sure, he has been criticized. All Presidents are criticized. And where Mr. Truman caught his lumps only from the conservative right, Mr. Eisenhower often has caught it from both sides—liberal and conservative, white and black, North and South.

But if there are times when it may seem that Mr. Eisenhower can't win for losing, more frequently it appears that he can't lose for winning.

We have in mind the astonishing fashion in which Mr. Eisenhower's defeat on his defense reorganization bill has wound up as Mr. Eisenhower's victory. Both the administration and the Congress were agreed on about 90 percent of the original bill; so far as these provisions were concerned, there scarcely could have been an "Eisenhower victory" because there was no contest.

On two points, however, there was great controversy. The House insisted upon a provision specifically allowing both the Joint Chiefs of Staff and the individual service secretaries to take their dissenting views on major problems to the Congress. Mr. Eisenhower demanded that the provision be eliminated. It was, he said, "a bad concept, bad practice, bad influence," and an invitation to insubordination. What happened? The Congress coldly kept this provision intact.

Back on April 3, in a special message, Mr. Eisenhower said: "We must remove all doubts as to the full authority of the Secretary of Defense." He called "fundamental" the Secretary's need for greater flexibility in transferring appropriations. Within limits, he declared, such authority should be "complete and unchallengeable." Dozens of Congressmen, however, were unkind enough immediately to challenge that which the President regarded as unchallengeable. He quickly retreated, and the provisions he once described as "fundamental" never were sought at all.

On these two major areas of controversy, representing just about all the controversy there was, Mr. Eisenhower was roundly licked. Yet he smilingly assured reporters last week that "except in relatively minor respects, the bill adequately meets every recommendation I submitted to Congress." And the headlines dutifully read, "Eisenhower Scores Victory in Defense Fight."

If Mr. Eisenhower could just enchant the Russians the way he seems to enchant everyone here at home, the United States would have it made abroad.

Your Dollar

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. POWELL. Mr. Speaker, two significant events have taken place in the 2d session of the 85th Congress. On August 8, 1958, the House of Representatives adopted three civil-rights amendments by a voice vote. This is the first time that the Powell amendment has ever been adopted by a voice vote and on that date the science aid bill passed the House, providing that there would be no discrimination on account of race, religion, national origin, or sex.

The other significant event occurred when the House and Senate approved the Small Business Investment Act of 1958. The brilliant columnist for the New York Post, Sylvia F. Porter, has summarized this important legislation in her column of August 7, which I am including in my remarks:

YOUR DOLLAR

(By Sylvia F. Porter)

The banks of this Nation are not designed or organized to provide risk capital or long-term loans for small business firms. This, the American Bankers Association, organization of the country's bankers, readily admits in black and white.

The capital markets of this Nation also are not set up to provide growth capital at tolerable cost for small firms. This, the Investment Bankers Association, organization of the country's investment banking houses, readily admits in black and white, too.

Nor are the existing business-loan programs of the Federal Government and some of the States geared to doing an adequate job of meeting small-business needs for capital with which to expand and grow. Lending activities of Government agencies are comparatively meager; restrictions on their operations just about prohibit the agencies from making the type of loans small-business men so desperately seek.

For years a dangerous vacuum has existed in the financing system of this country, and because of the vacuum the position of the small-business man in America has steadily deteriorated.

For years, a force toward busness giantism in the United States has been the money squeeze on small firms and because small firms have simply had no place to go for adequate long-term financing, increasing numbers of them have shriveled and died.

Now, though, a move is being made to fill this vacuum—as a result of the long efforts of Senator SPARKMAN, (Democrat, of Alabama) and the devoted work during this congressional session of Senator JOHNSON, (Democrat, of Texas) and Representative PATMAN.

A turningpoint for small business in our land will be reached when "The Small Business Investment Act of 1958" goes on the books—as is anticipated any day.

You should know about this act. For your own welfare, you should help make the program and experiment a roaring success. Here, therefore, are vital details.

Question. What does the act provide?

Answer. It provides that Congress will appropriate $250 million for the Small Business Administration for use in promoting the formation of local sball business investment companies the Nation over. These companies are to help small firms get risk capital and long-term loans.

Question. How will the local investment companies be set up and financed?

Answer. A group of as few as 10 local businessmen can voluntarily form an investment company with the approval of the SBA. To start, the company must have a minimum of $300,000 of capital, but half of this it can get from the SBA. The other half must be raised from private sources and the company can obtain additional capital from private sources as well.

In short, these are to be private investment companies. Although they will be kicked off with Government assistance, the idea is that eventually, they will be owned almost entirely by private capital.

Question. What will the investment companies do for small firms?

Answer. A local investment company may invest risk capital directly in a small firm—actually arrange to buy stock in the firm; or

It may make a long-term loan running up to 20 years at an interest rate determined by the SBA to the firm.

The only key limitation is that the investment company can't lend an individual small business more than 20 percent of its total capital.

Again, the emphasis is on investment decisions by private, local businessmen backing their decisions with money of their own and seeking a profit on worthwhile risk loans. "Washington" won't be doing the job.

Question. Why is this so revolutionary?

Answer. It is revolutionary because the bill is creating a new system of financing small business. It is a most constructive step because it will give the small firm a more equal opportunity to obtain long-term growth capital and thus will help it compete more effectively with big companies. It is a positive antimonopoly move.

Of course, much depends on how vigorously the SBA administers the program and on how enthusiastically local investors cooperate.

But as the law goes on the books, all of us who feel deeply that the survival of small

business is imperative to the survival of our system have high hopes. This will be recorded as one of the great deeds of the 85th Congress.

On Saturday afternoon, September 20, 1958, at 4 p. m. I am calling together a leadership conference of Negro businessmen in my district at my New York headquarters, 132 West 138th Street, to formulate plans for the establishment of a small business investment company in my area, as I am certain that this law will prove beneficial to the small business men in Harlem.

A Letter by Generalissimo Rafael L. Trujillo

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a letter written by Generalissimo Rafael L. Trujillo of the Dominican Republic to the Apostolic Nuncio to the Dominican Republic. The program suggested by Generalissimo Trujillo is affirmative and constructive in its purpose and appeal. It should commend itself to all people who desire to combat communism.

[Translation]
CIUDAD TRUJILLO,
DOMINICAN REPUBLIC,
July 22, 1958.

His Excellency the Most Reverend Monsignor SALVATORE SIINO,
Apostolic Nuncio of His Holiness Pope Pius XII, City.

YOUR EXCELLENCY: As we find ourselves relatively near the 2,000th anniversary of the Christian era and more than four and a half centuries since the discovery of America, an act symbolized by the raising of the Christian cross by Columbus on the first land that he trod; at a time, too, of deadly and persistent expansion by internationtal communism in nearly all parts of the Americas, in anticipation of which I hastened to save this Republic from such an evil influx as early as 1936 when I was the nation's president, it has occurred to me to submit to the high consideration of His Holiness Pope Pius XII, through the distinguished mediation of Your Excellency, an idea which I believe to be of considerable importance, so that, should the Holy Father deem it appropriate, he would consent to sponsor its translation into reality.

The idea is the following: The desirability, both from the historic and religious points of view, that the Holy See should arrange for the dispatch of a high pontifical mission to the capitals of all the countries of the New World, entrusted with the lofty mission of realizing in those countries what we might call a ratification of the Catholic faith and a defense of that civilization which was born with Christianity. Its mission of reaffirmation of the human principles of peace and concord cannot at this time be but one of the gravest concern in the face of the disastrous events which we are witnessing. This would come to be, let us say, an intensive campaign for spiritual strengthening against communism, which, incidentally, does not exist in this country thanks to the foresighted measures I erected as a barrier against it. Undeniable is the ever-alert zeal with which not only the church of this country but also that of the other Catholic American countries carries out its ministry. But inasmuch as the enemies of the freedom and equality upheld by Christianity are increasing their efforts, an action such as I herein suggest would seem desirable, an action to fortify the spirit of the great family of Christian peoples of this hemisphere with the far-reaching impact that a pilgrimage of this magnitude, sponsored by the spiritual father of all the faithful, would have.

His Holiness Pope Pius XII advises from his exalted position as Christ's representative on earth that Christian peoples everywhere make the greatest efforts to halt the advance of communism.

Such concern by the holy father would have at this time, in the advancement of my proposal, a far-reaching significance, should his holiness so deem it, I think that his high decision in this regard would reinforce the very action he has been advising for the attainment of world peace.

If the suggested idea is acceptable to his holiness, the high pontifical mission which would be set up for this purpose, would commence its work in Ciudad Trujillo, the capital of this country in which, as is well known, the first mass was held in America, the first cathedral built, the first university founded, the first government set up, and the work of colonization and civilization of the New World commenced—a few among the many other works which will not have escaped the privileged knowledge and perception of the holy father and of Your Excellency, in connection with the rare historic fact that the Dominican nation is the cornerstone of the Gospel in the New World.

Such a campaign, in which the reaffirmation of the spiritual seed of Christianity in the hearts of all American countries would be sufficient in itself to bring about, indirectly but surely, the required end, would in my opinion, constitute a most forceful onslaught against communism, and one of far greater value than all those violent and bitter diatribes against that doctrine, its founders and its exponents, ever launched by newspapers and anti-Communist groups with the use of invectives, always susceptible of bringing about violent and impetuous reactions.

Apart from the European cardinals and bishops comprising the mission which would attend the initial act in Ciudad Trujillo, all the cardinals and Bishops of America would be invited, and their expenses would be paid by our Government, as was the case with the International Catholic Culture and World Peace Congress held in this city. Generally speaking, the plan to be followed in developing the proposal and in financing this crusade would be agreed upon between our Government and the Vatican, should the idea meet with the approval of his holiness. In the remaining American capitals, the expenses could be covered by the various religious bodies pertaining thereto, together with official aid wherever this were possible.

Your Excellency, being aware of the Christian feelings of the Dominican people, and of their deep-rooted respect for the religious traditions which form an essential part in their double faith in God and in the country, is also well aware with what joy and enthusiasm a mission of such quality and purpose would be welcomed here.

Hoping that this suggestion, inspired as it is by the same high ideals as those of the vicar of Christ, may receive, in these critical hours of the world, the benediction and backing of Your Excellency, and Your Excellency's agreement to my request that it may be made known to his holiness so that he may give it his consideration, I have pleasure in conveying to Your Excellency my profound gatitude together with my best wishes for a safe journey, good health, and comfort on the occasion of your forthcoming visit to the eternal city.

I remain, Your Excellency's sincere and devoted,

RAFAEL L. TRUJILLO.

Moon Dust and a Rocket Around the Moon—Will They Unfold a Mystery of Life?

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. SIEMINSKI. Mr. Speaker, not since Pope Gregory, the Great, has there been so much speculation, it seems, about time, speed, space, and the moon, and their effect on the activities of man.

It is said that the Gregorian calendar under which we live was devised to free man from the comings and goings of the moon and the tricks it played. Man plowed by the moon and soon found himself plowing in the snow. So an adjustment was made for every 100 years and leap year was taken care of. Man now plows by the Gregorian calendar free of snow.

But has the calendar freed man from the tricks, if any, that the moon might still be playing on him during its 27.3 days visibility 13 times a year?

Like the ebb and flow of the tides, is there a repetitive pattern of conduct, of creative thought and feeling, of negative thought and feeling that man experiences in the coming and going of the moon? Is a calendar on thought and feeling in order? And knowing it, can we parry destructive tendencies and enhance creative ones? Lacking such calendar, do we think and feel, in the snow, as it were?

Man has lived through 4,000 years of recorded history. This means through 52,000 moons covering 200 generations. Is there a repetitive pattern of man's conduct in any of the quadrants of the moon through time?

Edison said that his ideas came from space. Are thought waves thrown by the handfuls, as it were, through space, with each of us absorbing as much of them as we can take?

These and other questions come readily to mind when one reads in today's press of moon dust and of our contaminating it with a direct shot at the moon. Some say that we should fire a rocket around the moon to avoid contaminating the moon dust. Moon dust, it is said, holds a mystery of life that could add greater glory to the divine in it all.

Under leave to extend my remarks, I insert in the RECORD an item on moon dust and a rocket around the moon as related in the August issue of the Saturday Review:

(By John Lear, science editor)

The Washington rumor factory once again is circulating the report that an American

rocket will head for the moon this month. If the story is true this time, we hope the rocket will be sent around the moon rather than at it, because the story of life from the moment of its beginning in the cosmos may be written in the dust on the face of the moon just as clearly as the later phases of evolution appear in the fossil-bearing sediments of the crust of the earth.

The moondust scrolls were discussed in the issue of Science which members of the American Association for the Advancement of Science read during the July week that marked the 100th anniversary of the theory of evolution through natural selection.

The moondust is assumed by astronomers to be of great antiquity. Prof. Joshua Lederberg, chairman of the department of medical genetics at the University of Wisconsin, and Dean B. Cowie, a member of the staff of the department of terrestrial magnetism, Carnegie Institution of Washington, D. C., reported. They explained: "This dust is cosmic material captured by the moon's gravitational field and presumably left undisturbed by atmospheric and biological alteration.

"For the biologist, the dust may furnish two striking opportunities," the two scientists declared, making public what they had said at a secret symposium in Washington in May on possible uses of earth satellites in life science experiments. The first possibility is "to assess the prebiotic synthesis of organic compounds"; the second is "to make an empirical test of cosmic dissemination of biospores."

To put the problem in its true perspective, it must be recalled that analysis of light from the stars indicates that the chemical elements existing on earth are here in different proportions of abundance than they are elsewhere in the cosmos. Whereas carbon, nitrogen, and oxygen make up three-fourths of all the matter in the universe apart from hydrogen and helium, there is no nitrogen in earth's crust and very little in the atmosphere, a relatively tiny amount of carbon, and a small amount of oxygen. In brief, "the richness of organic complexity on our own planet was formed out of the mere dregs of cosmic distillation."

If man could get his hands on some of the dust that moves among the stars, he might put it in a test tube and work backward along the chain of life to find his own beginnings. Interplanetary dust is the next best bet, but as soon as it nears earth by way of asteroids and comets it is likely to mix with what we already know is in earth's atmosphere and confuse the record. The dust on the moon can tell us the story if we can sample it without contaminating it. Even a minor degree of pollution could ruin the account.

Angry Voters

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. McCORMACK. Mr. Speaker, as a Member of the National House of Representatives the present Governor of Connecticut, Hon. Abraham Ribicoff, made an outstanding name for himself. As Governor of Connecticut, he has given outstanding service with ability and courage to the people of his State.

As he served the people of his district in the Halls of Congress with credit, so now Governor Ribicoff is serving the people of his State with credit, already establishing a reputation thoughout our country as an outstanding Governor.

As evidence of this fact, I include in my remarks, a highly complimentary editorial appearing in the Washington Star of August 14, 1957:

ANGRY VOTERS

Connecticut's Governor Ribicoff is a highly respected public official wherever his good works are known. And not the least of these, by any means, is his success in drastically reducing the slaughter on his State's highways.

This has been done by cracking down hard on the speeders, the drunks, and the reckless drivers. Some 14,000 motorists have been fined or had their licenses revoked, and some of these are reported to be planning to take it out on the Governor when he comes up for reelection this year. Since he won by only 3,200 votes in 1954, this could be a serious threat should it really materialize.

The Governor's safety campaign has reduced traffic fatalities in Connecticut by about two-thirds—a truly impressive record. There ought to be enough people in the State who appreciate this safety record, and whose votes will offset the malcontents who have been punished for traffic violations. It would also be a great help, of course, if Governor Ribicoff's Republican opponent were to announce that, if elected, he will continue the all-out drive against the bad actors on the highways. Politics being politics, however, this probably is too much to hope for.

Basis of Congressional Quarterly Study

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. BUDGE. Mr. Speaker, it is my understanding that on Monday next it is possible that the House of Representatives will consider labor legislation similar to that which was recently considered in the other body. The magazine Congressional Quarterly, Inc., in its issue for the week ending August 1, 1958, has an interesting summary of the amendments offered in the other body and a tabulation of the rollcalls thereon. Under leave to extend my remarks in the Appendix of the RECORD, I include the summary and tabulation, as follows:

BASIS OF CONGRESSIONAL QUARTERLY STUDY

For its vote study, Congressional Quarterly chose the 12 key amendments to S. 2888 and the 10 key amendments to S. 3974, all opposed by both the Democratic leadership and the AFL–CIO and all defeated. (Congressional Quarterly rollcall Nos. 49–59, 61, 89, 91, 93–96, 102, 103, 105, 106. Weekly report, pp. 555–557; 808–814.)

S. 2888: The following were the 12 amendments to S. 2888:

ALLOTT, Republican, of Colorado: Exempt level of benefits type plans from S. 2888; rejected 28–59 (Democrats, 2–43; Republicans, 26–16).

KNOWLAND, Republican, of California: Require election of union officers once every 4 years by popular ballot; rejected 37–53 (Democrats, 1–43; Republicans, 36–10).

KNOWLAND: Establish conditions for trusteeship over locals; rejected 35–53 (Democrats, 1–42; Republicans, 34–11).

KNOWLAND: Make payments to union representatives by employer agents illegal; rejected, 35–52 (Democrats, 1–41; Republicans, 34–11).

KNOWLAND: Authorize the Secretary of Labor to publish union reports and to notify the Attorney General if he believes false information has been filed; rejected 33–53 (Democrats, 1–40; Republicans, 32–13).

KNOWLAND: Bar as exclusive bargaining agent any union refusing to grant equal rights and privileges to members; rejected 28–58 (Democrats, 0–40; Republicans, 28–13).

SMITH, Republican, of New Jersey: Permit strikers permanently replaced during a strike to vote in representation elections; rejected 33–50 (Democrats, 0–41; Republicans, 33–9).

SMITH, Republican, of New Jersey: Permit the National Labor Relations Board to certify building and construction trades unions without prior certification elections; rejected 34–52 (Democrats, 0–42; Republicans, 34–10).

MUNDT, Republican, of South Dakota: Direct the Secretary of Labor to publish reports on violations of S. 2888 on mishandling of union funds; rejected 22–67 (Democrats, 0–43; Republicans, 22–24).

WATKINS, Republican, of Utah: Permit States to assume jurisdiction in labor disputes the NLRB declines to handle; rejected 35–51 (Democrats, 0–41; Republicans, 35–10).

CURTIS, Republican, of Nebraska: Tighten the Taft-Hartley Act ban on secondary boycotts; rejected 26–60 (Democrats, 0–41; Republicans, 26–19).

KNOWLAND: Permit the NLRB to invalidate a union election in which a member has been deprived of his vote contrary to union rules, provided the vote might have changed the outcome; rejected 35–53 (Democrats, 0–42; Republicans, 35–11).

Some of the amendments to S. 2888 were obviously pro-union in substance; Democrats, arguing they were merely an attempt to crack the antiamendment bloc and open the bill for wide-ranging changes, opposed them.

S. 3974: The following were the 10 amendments offered to S. 3974:

GOLDWATER (Republican, Arizona): Strike from the bill language narrowing the Taft-Hartley Act definition of "supervisor"; rejected 38–47 (Democrats, 11–33; Republicans, 27–14).

HOLLAND (Democrat, Florida): Permit States and Territories to regulate or ban strikes in public utilities; rejected 27–60 (Democrats, 9–37; Republicans, 18–23).

WATKINS (Republican, Utah): Permit States to assume jurisdiction in labor disputes the NLRB declines to handle; rejected 37–53 (Democrats, 7–40; Republicans, 30–13).

SMITH (Republican, New Jersey): Impose fiduciary responsibility on persons handling union money and permit members to sue against misuse; rejected 42–47 (Democrats, 5–42; Republicans, 37–5).

SMITH (Republican, New Jersey): Bar NLRB access to any union not complying with the reporting and disclosure provisions of the bill; rejected 30–53 (Democrats, 2–43; Republicans, 28–10).

KNOWLAND: Require unions, on petition of 20 percent of the members, to hold secret-ballot referenda on recall of officers; rejected 31–52 (Democrats, 6–40; Republicans, 25–12).

CURTIS: Bar "hot cargo" contracts and strengthen existing laws against secondary boycotts; rejected 32–51 (Democrats 8–38; Republicans 24–13).

POTTER (Republican, Michigan): Permit suit for recovery of union members' dues if

they are not being used exclusively for collective bargaining or related activities; rejected 30–51 (Democrats, 5–39; Republicans, 25–12).

MUNDT: Require union elections to be supervised by a membership board of representatives of all candidates; rejected 44–45 (Democrats 9–37; Republicans 35–8).

MCCLELLAN (Democrat, Arkansas): Strike from the bill a provision permitting building trades and construction employers to conclude exclusive bargaining contracts with unions that have not won a certification election; rejected 29–60 (Democrats 18–28; Republicans 11–32)

INDIVIDUAL VOTES ON SENATE LABOR BILL AMENDMENTS

The table below shows how Senators stood on the two labor bills (S. 2888, 3974) of the 1958 session. Numbers under "F" indicate how many times a Senator voted, paired or announced for amendments to make the bills tougher; under "A" the number of times he voted, paired or announced against. The breakdown is based on Congressional Quarterly roll calls 49–59, 61, 89, 91, 93–96, 102, 103, 105, 106. (Weekly Report, pp. 555–557, 806–814). An asterisk (*) indicates candidate for reelection.

Price Fixing Conspiracy Indictment Delayed

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. ROOSEVELT. Mr. Speaker, I have written the below quoted letter to the Attorney General because of my hope that the small-business people of this country will not feel that justice is such a cumbersome and slow matter that it cannot afford them any adequate relief.

The case illustrated below is of importance, and I hope that Members having small gasoline dealers in their districts will take an interest in this matter. Under leave to extend my remarks, I include it in the RECORD, as follows:

AUGUST 15, 1958.

Hon. WILLIAM PIERCE ROGERS,
Attorney General of the United States, Department of Justice, Washington, D. C.

MY DEAR MR. ATTORNEY GENERAL: It surprised me greatly when I recently learned that the price-fixing conspiracy indictment, in the case of *United States* v. *Standard Oil Company, et al.*, was dismissed by the United States District Court for the Northern District of Indiana, South Bend Division, because it was returned by an illegally drawn grand jury. The defendants in this case are 14 major oil companies who were charged with an unlawful combination and conspiracy in unlawful restraint of gasoline traffic in violation of the Sherman Antitrust Act.

It was entirely through the efforts of Subcommittee No. 5 of the House Small Business Committee that facts were uncovered which appeared to present a clear case of price fixing in the South Bend, Ind., area. This came to light during one of the subcommittee's hearings on distribution practices in the petroleum industry last year.

I immediately sent a telegram to the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice advising him of the situation and requesting that immediate action be taken to determine the existence of possible violations of the antitrust laws on the part of the petroleum companies involved. Transcripts of the hearings were promptly forwarded to the Department of Justice for evaluation as soon as they became available. The information contained in these transcripts was deemed by the Antitrust Division to be sufficiently complete to enable action to be undertaken by way of grand jury proceedings which culminated in the indictment of these 14 major oil companies for alleged violations of the Sherman Act.

I deeply regret that this indictment was dismissed, not so much because the subcommittee had announced that it desired to make it a "test case" in regard to the length of time that would elapse in the proceedings, but because of the importance of this case to the small business segment of the petroleum industry.

The price fixing in this case arose in connection with a gasoline price war. The hearings of the subcommittee have shown that price wars often reduce the retail dealers to a desperate financial plight from which they are usually unable to extricate themselves. Price fixing associated with such situations frequently serves to narrow the retailer's normal margin of profit. This particular situation also clearly indicates that any tampering with retail gasoline prices may take the ultimate form of antitrust violations.

In this case it was reported that the Jury Commissioner did not draw the jurors' names in public from a box containing names of at least 300 qualified persons as required by law, but that the names were picked from slips placed on a desk in the office of the Jury Commissioner. The indictment was dismissed because certain officials charged with the administration and enforcement of Federal laws did not perform their respective duties in a proper manner.

The fact that the Jury Commissioner and the clerk of the court were derelict in their obligations to follow the mandatory provisions of the Statute dealing with the method of selecting a grand jury does not, I submit, absolve the Department of Justice of its responsibility. Actually the Attorney General, as the chief law enforcement officer of the United States, is vested with complete control over all criminal prosecutions through the United States attorneys and other subordinates.

The duties of all officers of the Department of Justice and all functions of the agencies and employees of such Department were, with few exceptions, transferred to the Attorney General by the 1950 Reorganization Plan No. 2.

It is strange indeed that the United States attorney for that district was not more careful, especially in this case which appears to be one of national importance. The United States attorney as Federal prosecutor acts also in an administrative capacity and has wide discretion to be exercised for the general public welfare. Since he is the legal advisor of the grand jury and has the duty to present evidence to such body, it is, I think, not unreasonable to require that he make sure that the grand jury is properly selected and legally qualified to act, otherwise all criminal charges presented by it would be vulnerable to attack and all prosecutive efforts go for naught.

The Department of Justice has promised to seek a new and valid indictment this coming autumn. Frankly, I do not understand why this matter must be delayed until

a later date. It is a known fact that the longer any case, particularly one involving charges of criminal violations, is delayed, the more difficult it becomes to obtain a conviction.

Subcommittee No. 5 of the House Small Business Committee has been vitally interested in the welfare of the small-business man in the petroleum industry. During the hearings held by the Subcommittee during 1955, and again in 1957, the records were replete with allegations of coercive practices, price fixing and other undesirable methods of operations, to the detriment of small business.

Here, we have an indictment involving some of the biggest corporations in the country which was thrown out of court, due to what appears to be the obvious incompetence of important officials of the Department of Justice in failing to see that court officials comply fully with the express requirements of statutory law.

I shall follow this matter with a great deal of interest in observing what action is taken in its prosecution and what the ultimate outcome will be, and will appreciate your keeping me fully informed.

Very sincerely yours,

JAMES ROOSEVELT.

Euratom—A Symbol for the Middle East

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. PATTERSON. Mr. Speaker, the Joint Committee on Atomic Energy has given its unanimous approval to legislation providing for cooperation between the United States and the European Atomic Energy Community to advance the peaceful use of atomic power.

I, for one, firmly believe that it is imperative that this legislation be enacted before the adjournment of the 85th Congress. It represents a big step forward in the carrying out of the atoms-for-peace program which President Eisenhower gave to the world almost 5 years ago.

Mr. Speaker, under unanimous consent to extend my remarks, I include an excellent editorial on Euratom which appeared in the New York Herald Tribune of August 15.

The editorial follows:

EURATOM—A SYMBOL FOR THE MIDDLE EAST

It is fitting, and perhaps symbolic, that on the same day President Eisenhower made his dramatic appearance before the General Assembly, the Congressional Joint Atomic Energy Committee unanimously approved the legislation to set Euratom in motion.

For it was on this same rostrum, almost 5 years ago, that President Eisenhower made his "atoms for peace" proposal out of which Euratom grew, and which fired the whole world's imagination and dream of peace, through beneficial uses of the atom.

At first, the Soviet Union tried to block this idea, just as they are opposing the President's plan for the Middle East. But it caught up such worldwide support that in the end they joined it. Out of it came the International Atomic Energy Agency, now functioning in Vienna, and out of it also came Euratom, on which the five nations of the common market, particularly France, place great hopes for a rapid increase in the supply of electrical energy.

One can only hope that the history of "atoms for peace" will be repeated in equal worldwide support for a United Nations peace plan for the Middle East. Actually, the two are by no means unrelated. For once Europe develops fully the electrical energy potentials of the atom, it will no longer be as dependent on Middle East oil for its energy sources.

And by the same token, as the President suggested in his speech yesterday, the development of atomic power may eventually make possible the solution of the Middle East's own paramount dependency—on water. With cheap, and virtually inexhaustible, sources of power, it should eventually be possible to reclaim the vast deserts of Africa and Asia, and make them green again, as once they were.

Thus it becomes increasingly clear that not only peace is indivisible, but so is the progress and orderly development of man. The same irrefutable logic of "atoms for peace" lies in the President's plan for defusing the Middle East time bomb.

The Coal Industry

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. DENT. Mr. Speaker, today I am pleading for a bill that should have been passed many years ago.

I am happy that during my first term here I have been helpful in introducing this bill and having it released from committee.

The hopes of the coal industry, its workers, and the allied trades are riding on this vote. The need for research and chances for the survival of this important segment of our economy are one and the same. Without one, the other is lost.

For a full account of these aspirations and hopes, kindly refer to my address on page A7005 of the CONGRESSIONAL RECORD of August 5, 1958, entitled "The Coal Research Program."

At this point, I wish to put into the RECORD the following article which appeared in a recent issue of the Financial Post, of Toronto, Canada. In this article, the coal producers of Canada are calling for long-range planning and for the survival of their coal industry.

Can we do any less at this late date? I sincerely believe we can make this industry the pillar of American prosperity and economic welfare once again, if given help.

HELP COAL INDUSTRY NOW—NOVA SCOTIA WARNS COMMISSION

Nova Scotia's views on the hardpressed coal industry:

Short-term prospects are not particularly bright. Long-term prospects are for increased use of coal.

Appearing before the Borden Energy Commission recently, Hon. E. A. Manson, Nova Scotia Minister of Mines, viewed the next decade as crucial, warned against the long-range consequences of mine shutdowns.

"Unless the province's coal industry can be maintained in the next 10 years, either by government assistance of legislation, the industry will not be able to take its place in the supply of energy by 1980," he said.

Manson observed that by 1980 Canada likely will have to produce twice as much coal as it does now.

Nova Scotia also suggested some form of assistance to submarine mines to maintain coal in a competitive position with natural gas. Urged sufficient freight subventions to make coal competitive with imported residual oils. This includes residual oils made from imported crudes. Recommended the Dominion Coal Board be maintained, even if a national energy authority is established.

"Absorption of the board into a larger organization with responsibility in the whole energy field would lessen the effectiveness of its work on coal," Manson claimed.

In line with our efforts here in Congress for action on a research law for the United States coal industry, I want to submit the following items from one of our wide-awake daily newspapers in my district.

The publishers of the New Kensington Daily Dispatch are aware of the urgent need for this important legislation:

NATIONAL COAL RESEARCH EFFORT SOUGHT BY DENT

(By Robert E. Hennessee)

WASHINGTON.—Congressman JOHN H. DENT Democrat, of Pennsylvania, is urging Congress to establish a Coal Research Commission and assures his colleagues that coal can have a bright future.

"There is no limit," he told the House this week, "what science and engineering may do for coal, for everyone connected with the industry, and for the millions everywhere who stand to benefit by what coal and its products may bring to them."

The House Committee on Interior and Insular Affairs recently reported out a bill to set up a coal research commission, which DENT said could do for the coal industry what the Agriculture Department has done for American farming, in improving efficiency, production and new uses.

DENT traced the history of American coal from that day back in 1673 when the French-Canadian explorer Louis Joliet recorded on a map a deposit of "carbon de terre" along the banks of the Mississippi River in northern Illinois, up to the present, which, he said, finds is with the most efficient coal industry in the world.

Then the Congressman turned to the future:

"Energy demands will continue to spiral upward at a progressively greater rate as population increases and standards of living improve. The coming decades will require such an enormous amount of energy that coal industry production will of necessity tend ever upward."

DENT concluded:

"What is in store for us in the way of utilization (of coal) is too wondrous for conjecture.

"Besides carrying out its primary functions to provide heat and power, coal has become the source of a wide variety of chemical products including sulfa drugs, nylon, plastics, explosives, perfumes, and fertilizers. Tests (to develop new products) must be encouraged."

Dent said that while the bill reported out of committee was not in the precise form he would have liked, he nevertheless thought it would "go a long way toward reaching the objective we all hope to obtain."

COAL QUANDARY

Congressman JOHN DENT'S efforts to keep the coal industry alive through a proposed National Coal Research Commission is certainly commendable.

Like the railroad industry, the coal industry has virtually been engulfed by the atomic and nuclear age of this decade. But Congressman DENT, as well as many others close to the scene, realize that this industry, which has meant so much to Westmoreland County and the Nation, still can play an important role if given the right direction in Washington.

DENT, who was raised in the aroma of coal dust in the Allegheny-Kiski Valley, last week had an opportunity to express his views before the House and as reported by Dispatch Washington correspondent Robert E. Hennessee, it looks like something might come out of this bill which is now out of committee and could be passed before this session adjourns.

It would behoove interested parties in this area to lend their moral support to Congressman DENT in this much-needed effort to keep the coal pits of the Nation a lasting American tradition.

Those of us from the depleted and economically ill coalfields recognize the opposition of other fuels to this legislation. We also feel that it is the kind of blind opposition that in the end hurts the coal industry and the people of the country in general and at the same time does no good for the oil and gas industries.

These industires fail to recognize the common good as the basic ingredient of American welfare and prosperity.

If this Congress fails to pass this legislation it will only signal a harder fight next session.

Speaking for the group of Congressmen from the coal-producing States, I can assure the Congress that we cannot give up the fight until we have reached our goal.

Increased Judge Power: A Congressional Obligation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. KEATING. Mr. Speaker, the Washington Post of August 14 contains another strong editorial urging congressional action on the Federal judgeship bill The Post along with other newspapers all across the country has for some time been pressing for enactment of this vital measure. In its latest editorial, it presents further convincing arguments of the need for more judge power in the Federal judiciary.

Passage of the judgeship bill is one of the great unfinished tasks before this Congress. I do not believe we should go home—in fact can go home, in good conscience—without acting on this bill.

I hope the leadership will accept its responsibility in this crucial area before it is too late.

Under leave previously granted, I insert the Washington Post editorial at this point in the RECORD:

TWO DOWN, ONE TO GO

Two bills passed by Congress should contribute much to relief of the overburdened Federal courts. One limits the cases that may be filed in the Federal courts by reason of diversity of citizenship to controversies involving $10,000 or more. The previous minimum fixed in 1911 was $3,000. Moreover, a corporation suing persons living in the State where it has its principal place of business can no longer get the case into the Federal courts on the ground that it is incorporated in another State. The result should be a substantial relaxation of pressure on Federal judges.

The second measure which has passed both Houses requires the chief judges of the district and circuit courts, with some exceptions, to relinquish their administrative duties after reaching the age of 70, although they can still function as regular members of their courts. This should bring more vigorous leadership into 7 circuit courts and 19 district courts within the next year.

An acute need still exists, however, for enactment of the bill creating 46 new judgeships which has now been approved by the Judiciary Committees of both Houses. The compulsion behind the bill is to be found in the fact that cases in the Federal courts have increased 62 percent since 1941 and judge power only 26 percent. The result is increasing delay in the disposition of cases. In Brooklyn it takes about 3½ years for a civil suit to come to trial, and in many other areas the delays are almost as serious. This shocking denial of justice has brought cries of alarm from Chief Justice Warren, the judicial conference, bar associations, and many other groups. It is making a mockery of the United States' professed concern for justice to the individual.

If some of the Democratic leaders in Congress are reluctant to create 46 new judgeships for a Republican President to fill, they may well recall that Mr. Eisenhower has indicated a distaste for overloading the bench with lawyers chosen from only one party. Spokesmen for the administration have indicated that when something approaching a balance between the number of judges selected from the two major parties has been achieved, the President would try to maintain that balance by naming judges from both parties. A positive statement of this policy by the President now would give an obvious boost to the judgeship bill.

But Congress has a responsibility to authorize more judgeships in any event. The need to bring the courts abreast of the ever increasing flow of Federal cases is sufficiently great to justify Majority Leader JOHNSON and Speaker RAYBURN in launching special drives to get the judgeship bill enacted before adjournment.

The Housing Act of 1958

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. DONOHUE. Mr. Speaker, as we progress toward the conclusion of this session, I most earnestly hope that the so-called omnibus housing bill of 1958, recently acted upon in the Senate, will not be overlooked in the logjam that so often accompanies the rush toward adjournment. Failure to act on this bill, in my opinion, would be placing an unhappy and unnecessary blemish upon an otherwise commonly admitted constructive record of this 85th Congress.

One basic reason, among many, why action on this measure is vitally important is the admitted effect it would have as a further antirecession bulwark and production and employment stimulus.

The emergency housing bill that was earlier passed has demonstrated that a stimulation of the building industry, with the associated trades affected, is one of the wisest and most economical methods through which any further deterioration of our overall economy can be restrained.

It is universally recognized that our economy has been in a recessionary trend for a year or more and, although current indicators have shown some improvement, most authorities agree that we are far from being on safe ground. The unemployment situation, as revealed by the most recent figures, is still deeply disturbing. These figures unquestionably establish that approximately 5 million Americans are yet out of work and more than 1½ million persons have been reduced to part-time work. The most optimistic interpretation of these statistics demonstrate that more than 7 million families in this country are directly experiencing the hardship results of the economic recession. We have at hand an economical way and instrument to substantially relieve their distress.

This housing bill would undoubtedly assist in the revival of our lagging economy by encouraging investment activity in the construction field, with an accompanying increase in production and employment.

Embodied also in this housing bill is the foundation purpose of promoting better housing throughout the country, giving further impetus to operating programs designed to combat slum areas, and providing needed assistance to the continuation and expansion of the veterans home loan program.

Another primary objective of the measure is to further the advancement of scientific and academic knowledge, by helping our hard-pressed institutions of higher learning to provide the vitally needed dormitories, classrooms, and scientific laboratories which are pitifully inadequate to meet the ever-increasing enrollment. Obviously, one of our essential national goals is to compete with, and surpass, the scientific achievements and progress of Soviet Russia, and we cannot hope to do it unless the fullest facilities are made available to students through our colleges and universities.

In this most blessed country in the world, we have only begun to attack the problems of providing decent housing for our elderly citizens, expanding FHA insurance, encouraging wider recognition of the necessity of urban renewal, and relocating families displaced by wholesome and healthy slum clearance.

The foundation unit of any nation is the family. The best guaranty of wholesome family life is a home of their own in decent surroundings. Reasonable encouragement of better housing for American families and American citizens, is one of the wisest investments we can make toward the future safety and progress of this great country. In order to make this wise investment, I hope that the housing bill will be presented to us for debate and action at the earliest possible date.

SOS for a Dying Industry

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. GRAY. Mr. Speaker, since coming to Congress in January of 1955, I have been fighting to save a vital industry in America. I refer to the fluorspar industry. Due to foreign imports our domestic industry has been strangled. Congress inaugurated a program to stockpile this strategic material and it has been of great help. I am more than disturbed, however, that the President this week vetoed a 1-year extension of that program. I am indeed hopeful that Congress can pass the minerals stabilization bill now awaiting House action, in order that this and other industries can survive. Under leave to extend my remarks I am enclosing a letter to the editor from one of my constituents outlining the true circumstances of this small but vital industry.

The letter follows:

[From the St. Louis Globe Democrat of July 12, 1958]

SOS FOR A DYING INDUSTRY

To the EDITOR:

While we hear "recession-depression" on all sides, I would like to bring to your kind attention a dying American industry problem. I refer to the slow squelching of our fluorspar mining industry because of foreign imports and lack of proper Government protection. Because I believe the future will make unprecedented demands upon the fluorspar industry with new needs, because this future could be a great boost to economy in your area as well as ours, and because I am personally acquainted with the heartache and struggle for survival, I feel that somehow, someway, something must be done in its behalf.

Of the 660,000 tons of fluorspar consumed in the United States in 1957, foreign imports totaled 620,000. Southern Illinois and Kentucky produce most of the United States fluorspar. There is plenty of it. The industry could expand overnight. In 1957, 120,000 tons of foreign imports went into Government stockpile under Department of Agriculture barter contracts, 500,000 tons poured into America's commercial consuming market, despite fluorspar ore reserves and milling capacity substantially capable of supplying all our consumption needs.

Here is a good, rich American resource with a growing demand that cannot move forward and develop fully because of foreign imports. Our Government in this instance is failing to protect an industry of its own blood and country, nor even giving it an even chance. Employment in this area is critical. Man does not want charity and state aid, but the rightful dignity of working for his daily bread.

Fluorspar through its usage in steel, aluminum, uranium, atomic energy, and fluorocarbon chemicals is becoming more and more an integral part of America's future. Reasonable estimates for 1960 suggests a fluorspar consumption of over 1 million tons. Fluorspar is at present the only commercial source of fluorine. New uses for this mineral are developing all the time. The use of fluorine as an oxidizing agent in high energy fuels for missiles and rockets, expansion of fluorocarbon producers (these chemicals being used for propellants in pressurized containers, refrigerants in cooling systems, and fluoroplastics), hydrofluoric acid consumption used in atomic energy program, fluoridation of community drinking water systems directly instead of with a fluorine compound, etc.

With countless other experiments underway for the use of fluorspar, which will create new demands from time to time, here is an industry with a great future. But this future will not belong to the American people unless our Government takes measures to protect them.

Mrs. BILL D. JOHNSON.

HARRISBURG, ILL.

Senator Smith of New Jersey

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mrs. DWYER. Mr. Speaker, in the Senate of the United States last week, our colleagues in that other body suspended their legislative proceedings for several hours in order to pay tribute to the senior Senator from New Jersey who is leaving the Senate at the end of the present term.

The demonstration of the respect and affection which his colleagues feel for Senator SMITH was unusually impressive. The Newark Evening News and the Elizabeth Daily Journal have both commented editorially on this display of deep warmth toward Senator SMITH. The editorials should be of interest to the great many Members of the House who have known and worked with Senator SMITH over the years, and I ask that they be considered as part of my remarks.

My own friendship with Senator SMITH goes back many years. I have cherished every element of that friendship and every occasion on which it has been renewed. As the News and the Journal have pointed out, ALEXANDER SMITH was a man of great talent, broad experience, and deep devotion to his country. But to me, the qualities that most endeared him were his warm, human kindness and understanding, his unfailing generosity and consideration for others. There are altogether too few people like ALEXANDER SMITH in this world, and the Congress of the United States will be the poorer for his absence.

The editorials follow:

[From the Newark Evening News of August 10, 1958]

TO SENATOR SMITH

Beginning in 1944 when he was elected for the unexpired term of W. Warren Barbour, New Jersey has three times sent H. ALEXANDER SMITH to the United States Senate. Now, as Congress nears adjournment, he is preparing to relinquish a legislative career that over the years has enhanced his stature and that of his State and party.

Senator SMITH is not taking leave of the Senate until the expiration of his term next January. But last week his colleagues took occasion to make abundantly clear what they think of him as a friend and as a Senator. Led by CLIFFORD P. CASE, soon to be New Jersey's senior Senator, Member after Member arose to praise Mr. SMITH's service to the Nation and Senate in a tribute that continued for several hours.

It was a warming demonstration of personal esteem that in Senator SMITH's case was the more impressive because it was so richly deserved.

[From the Elizabeth Daily Journal of August 11, 1958]

FAREWELL TO SENATOR SMITH

In the conventional pellmell rush for an illusive adjournment hour, Capitol Hill has little moment for personal sentiments, but the Senate paused for 2 hours in a tribute to New Jersey's H. ALEXANDER SMITH. He is in the final months of his third term, and last spring declared against another election campaign.

The junior Senator from the Garden State, Union County's Mr. CASE, summarized the congressional concept of his colleague with the simple statement that "I wish the world were full of men like ALEX SMITH."

Senator SMITH took to the Senate one of the broadest and most absorbing backgrounds to be found in all the Congress. He has talents far above the run-of-mine legislator and experience and broadness of field rarely encountered, even at the congressional level, where ability is a hallmark.

Both sides of the aisle joined in the tribute to Senator SMITH. For 2 hours partisan labels were laid aside as the men who have worked with him in committee sessions and debated him on the floor spoke their praise.

The prospects are that the Nation will not lose Senator SMITH's skills. Instead of the traditional shelving as an elder statesman of his party, he probably will be commandeered for advisory or diplomatic service in the administration, where he is held in the highest esteem.

From his work on the Senate's Foreign Relations Committee and his prior experience he has attained stature as an expert in United States dealings with other nations. This is the sphere in which the Nation needs its finest and shrewdest. It is a logical locale for Senator SMITH.

Middle East Crisis

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. ENGLE. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD excerpts from a speech on the Middle East crisis that I made recently:

THE MIDDLE EAST CRISIS

(Excerpts from an address by Congressman CLAIR ENGLE, Los Angeles, July 20, 1958)

The decision by the President to send the Marines to Lebanon was a tragic choice between two evils—the evil of the collapse of Lebanon, Jordan, and the Persian Gulf States in the wake of the Iraqi revolution, and the evil of unilateral military intervention unsupported by the United Nations with the risk of world war in the atomic age.

The President has made the choice. The country has been committed. We are now in the midst of a graver international crisis than we faced in Korea. We must see this crisis through.

Therefore, this is not the time to carp and criticize, to seek political capital out of our national peril, however regrettable we may

find it is that this administration's foreign policy has brought us face to face with these awful alternatives.

But the time will come for a full review of our Middle East foreign policy, and when it does, it will be fully explored. I cannot refrain from pointing out that spokesmen for the Democratic Party in the United States Senate have foreseen the gathering storm in the Middle East and issued warning after warning that our policy was inadequate and inept. Those warnings have been ignored.

A fuller discussion of the past is for the future. Today, I wish to deal with some constructive proposals as to how we may extricate ourselves from the prospect of indefinite military involvement in the Middle East. For we are now in the position of the man with the bear by the tail—it only takes one man to get hold, and a dozen to let loose.

What should we do now?

First, I think we should do everything in our power to substitute military forces acting in the name of the United Nations for forces acting in the name of the United States alone. We should pursue this objective with all the vigor at our command, and we should not be deterred by the Soviet veto of our resolution in the Security Council, which was anticipated. I am glad to see that we are calling for an emergency session of the General Assembly. The going will not be easy there, with a two-thirds vote required.

Second, while these deliberations are in progress, every effort should be made through adequate supplies and training to prepare Lebanon—and in the case of Great Britain, to prepare Jordan—to maintain law and order, and to resist subversion from the outside in the event we lose the resolution in the General Assembly. If that happens, we can't stay in Lebanon forever, and there is the possibility that after the upcoming election there, a new government in Lebanon may ask us to get out.

Third, I believe we must seek an arrangement through the United Nations for a U. N. Force to guarantee the peace, and to protect legal governments of Middle East states from subversion from without, coupled with a worldwide embargo on the shipment of arms to that area, while we get at the more basic causes of the unrest and ferment which are sweeping through the whole of the Middle East.

So far, our Middle East foreign policy has not done so. The premise of the Eisenhower doctrine is that the chief cause of the trouble in that area is the threat of armed Soviet intervention. And the Bagdad Pact is based on the assumption that Soviet economic, political, and military influences can by a military alliance be prevented from operating in an area adjacent to the Soviet border.

The Eisenhower doctrine is limited by its terms to resisting aggression from a country controlled by international communism. Can we apply that doctrine to President Nasser, even if it is proved that he had a hand in the current Middle East troubles, which the team of U. N. observers in Lebanon has been unwilling to certify? The fact is that the Eisenhower doctrine doesn't touch top, side, or bottom of the basic issues in the area, and isn't even invoked as the ground for our military intervention in Lebanon. The Bagdad Pact is also essentially negative in character, and futilely seeks a containment of Nasser as well as the Soviet Union. Both the doctrine and the pact ignore the basic realities of what is going on in the Middle East.

In that area—marked by one of the heaviest concentrations in all the world of stagnating poverty, hunger, fear, and disease, corrosive superstition and human subjugation—tens of millions of people are struggling to emerge almost overnight, into the mainstream of international life. And they are struggling to find for themselves the basic decencies of human existence, which they now lack, but which modern technology makes possible.

One manifestation of this vast struggle is nationalism. We, of all peoples, cannot quarrel with that. And we cannot stop it if we would. We must recognize that fact, just as we also recognize the difficulties and dangers inherent in the great surge of nationalism in the Middle East at a moment when the peace of the whole world is in precarious balance.

What we can do, and what we must do, is to distinguish between the constructive and destructive tendencies in Middle East nationalism, and encourage the former and oppose the latter.

A constructive nationalism will seek not war, not conquest, but peaceful solutions to the problems of borders, of refugees, of an orderly liquidation of the last vestiges of colonialism, of wiping out hunger, disease, ignorance, poverty, and fear.

Now specifically, as I mentioned previously, an essential precondition for progress in the Middle East is a U. N. emergency force to be made available to keep the peace and block aggression from any source. At the same time, we should initiate proposals to end the arms race in the Middle East through an embargo on the shipment of arms to that area from any other source than the U. N. itself.

We should take the lead in the United Nations, working toward reestablishment of the principle of free navigation on international waters and unfettered access to the Gulf of Aqaba and the Suez Canal for ships of all nations.

We must make it clear, again acting through the United Nations, that the dream of some Arab leaders of pushing Israel into the sea is nothing but a fantasy and will not be permitted to materialize.

Finally, we should direct our influence toward the establishment of a United Nations organization charged with developing, financing and implementing programs of technical aid to all nations of the Middle East.

Toward this end, we should take the initiative in the United Nations in proposing a Middle East Development Authority as an administering agency for the mutual pooling of capital and technical aid for this entire region. Americans should offer to participate in supplying capital and technical aid.

In this way, nationalism will be put to work in constructive channels, the ground work laid for ending the poverty of these peoples and the solution of their many vexing problems.

We should move to do what we can to alleviate starvation and crippling malnutrition in the Middle East by making available to the peoples of that area at least a portion of the farm surpluses of this Nation which now cost us $1 million a day just to keep in storage.

An area so vital economically to us—and an area which is the key to world peace itself—requires a program with this vigor and imagination. We must prepare to sustain such a program for many years to come.

For we must recognize that we are in for many years of turmoil and difficulty in the Middle East. There are no simple, quick, easy solutions to the many complex problems of that turbulent area.

But we have an interest in the Middle East of such overriding importance that it cannot be ignored. That interest is the creation of a peace in the Middle East which is both stable and vital.

If we do not recognize the urgency of that interest, and our inescapable responsibility for action to achieve that peace, the present crisis will seem mild compared with the others that must surely follow.

Conservation of Water Resources

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. ROGERS of Texas. Mr. Speaker, no more important challenge confronts the people of the 18th Congressional District of Texas which I have the honor to represent, than the conservation of our water resources. Realizing this situation, the members of the Panhandle Underground Water Conservation District No. 3 at White Deer, Tex., instituted a competition and opened it to all high school seniors in the district who submitted essays under title of "The Importance of Water Conservation." First place winner in this contest was Mr. John Davis, of Pantex Village, Panhandle, Tex., who received $150 as first prize. The larger prize was, of course, the recognition of the necessary stewardship of our natural resources. I request unanimous consent to insert herein the text of Mr. Davis's excellent first-place essay.

The essay follows:

WHY THE IMPORTANCE OF UNDERGROUND WATER CONSERVATION?

(By John Davis)

One could write the story of man's growth in terms of his epic concerns with water.

Through the ages people have elected or have been compelled to settle in regions where water was deficient in amount, inferior in quality, or erratic in behavior. Only when supplies failed or were made useless by unbearable silt or pollution or when floods swept everything before them, were centers of habitation abandoned. But often the causes lay as much in the acts or failures of men themselves as in the caprices of nature.

There's a lot to know about water. We see and feel rain, snow, fog, and dew. We use water for drinking and washing, we irrigate our fields and lawns. We talk about the weather, complain that it is too wet or too dry. Most of us are conscious nearly all the time of the importance of water in our lives, but actually our knowledge of it is rather skimpy.

We know the symbol of water, but little about its properties, which can make us comfortable, rich or poor, secure or insecure. We cannot live without water, but we could live better if we knew more about it.

Ordinarily water, which most people take for granted, is on the way to becoming a national problem of great, even dangerous size. Farmers complain that wells and springs, which they have depended on, are going dry as the level of water in the ground gets lower.

The problem of water supply already is critical in many areas. Consumptions and other uses of water are phenomenal yet only a fraction of what they will become. In the Southwest the problem of water shortage is an old one. There are parts of the East and Middle West where the supply of water threatens to run below demand. In some areas ground water is being withdrawn 30 times as fast as it is being replaced.

In 1955 the United States used 200 billion gallons of water a day. It is estimated by 1957 we will use 490 billion gallons of water a day. That is enough to supply 145 cities the size of New York with water.

More and more Texas farmland is being irrigated with underground water every year.

In the Panhandle, High South Plains, the winter garden area, and in other sections of the State, more wells are being drilled, and more water is being pumped from the underground for irrigation, industrial, and municipal supplies.

There are two great formations of water under Texas. These are the Ogallala formation in the Panhandle and South Plains, and the Lissie Sandstone formation along the gulf coast.

When circumstances that govern the water yielding performance of these two Texas ground water sources are reviewed, one conclusion seems inescapable. The demands placed upon these two water bodies exceed their capacity to match the withdrawals on a sustained basis. The fact remains that we have superimposed upon these aquifers, demands of such tremendous quantity that steady water table declines seems inevitable.

In 40 years our Texas population is expected to reach about 17 million people, and most sources are in agreement that in the same period the national population will approach 300 million.

These oncoming millions will place a heavy strain upon our physical capacity to provide enough food and fiber.

In reviewing these facts, we know that expansion, industrial expansion, and the expansion of irrigation all tend to steadily deplete the amount of our ground waters.

The outlook for the future ground-water supplies presents a problem that is important to the economy and well-being of almost every citizen in the United States. It is of particular importance to municipalities using ground water as a sole source of water supply, to many thousands in rural areas who are dependent on ground water for domestic supply, and a large number of the bigger industries.

In some of our larger cities water has been rationed. People were not allowed to water their lawns. In some instances bathing was even limited.

The city without a water problem has been the exception rather than the rule, and it shares this dilemma with farmers, ranchers, industrialists in the rapid expansion and increasing demand for water.

To meet the water demands that will be placed upon us in the future, we must do our best to conserve our underground water.

Water falling on the surface either enters the ground or runs off into streams. A part of the water that enters the ground evaporates or is transpired by plants. Water in excess of these soil requirements percolates downward to zones of saturated rocks and thus reaches ground-water aquifers.

By conservation practices we can decrease the amount of water entering the stream and increase the amount of water entering the soil.

By building dams on our rivers we can increase the amount of ground water. Also, we can supply cities with water and reduce the amount they are taking from the ground.

Sewage water from large cities can be purified, and a large portion of it may be reused for industrial purposes.

Intelligent development of ground water must be based on clear, accurate evaluations and appraisals. Although much has been accomplished in the past 20 years from investigations of our major ground-water reservoirs, there still remains a need for detailed study of the geology and occurrence of ground water.

The intelligent use of water has always been a road to wealth and to a better way of life.

Water Conservation

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. ROGERS of Texas. Mr. Speaker, the second-place winner in the Panhandle Underground Water Conservation District No. 3 was Miss Mary Lou Miller, of Panhandle, Tex., whose prize was $100. Her treatise on the importance of water conservation is outstanding, and I request unanimous consent to insert the essay herein that all the Members may have the benefit of Miss Miller's excellent views. Her fine contribution toward the solution of a major national problem will be long remembered.

The essay follows:

WHY THE IMPORTANCE OF WATER CONSERVATION?

(By Mary Lou Miller)

A series of blows to the Nation's water supply since 1940 has sent experts scurrying out for ways to conserve this diminishing vital resource as well as to open up new water supplies. Unexpected increases in population, shifts in industry, droughts, and pollution of streams and lakes have accelerated the need for water, while decreasing the ready supply.

Next to the air they breathe, water is probably the most important thing in human lives. Water is so easy for most people to get that they seldom think how necessary it is for man, animal, and plants. Without it man and his animals would die. The bodies of living animals and plants contain more water than any other substance.

The pioneers of Daniel Boone's day had to hunt for a never-failing spring or brook before deciding upon a spot for a cabin. Bitter battles have been fought for the possession of some muddy waterhole or tiny stream that would furnish this liquid.

One of the most important uses of water is for human and animal consumption; however man uses water in a variety of ways necessary to his way of life. One of the chief concerns of a farmer's life today is that the season will bring enough rain to supply the necessary water for his thirsty plants. Almost every modern factory uses great quantities of water in its many operations and in the disposal of its wastes. The modern home, with its facilities for bathing, cooking, and washing dishes, uses a great many thousands of gallons of water during a year. Often the least expensive way of moving freight is to carry it in boats on rivers, lakes, or oceans. Running water is used for the generation of waterpower and electricity. Civilization has arrived at the stage when the people demand that many of the stores, hotels, and office buildings be air conditioned. This again calls for water to cool or moisten the air. Water is used in refrigeration and for fire protection. It is a home for fish and aquatic life. Man uses oceans, lakes, rivers, streams, and ponds for recreational purposes. Life would be very drab and uninteresting if there were no brooks, rivers, ponds, lakes, or oceans to break the monotony of the landscape.

Man obtains his water from two main sources, ground supplies and surface supplies. Surface supplies consist of all the water that is above the ground, such as in rivers and lakes. Ground supplies come from springs and wells.

A certain amount of the water that falls on the earth's surface passes underground, the percentage varying with the porosity of the surface materials. This absorption of water is due to the fact that all rocks are somewhat porous and considerably fissured. Sand and gravel deposits are very porous and can store from 15 to 35 percent of their bulk of water.

Even though ground water is unimportant as a direct source for power, navigation, and recreation, it is of considerable importance because the minimum flow of streams is sustained chiefly by ground water and because it yields water suitable for most of the other uses of water.

Water passes underground in various ways. The following are the most prominent: Direct inhibition of rainfall, the sinking of surface flows in passing over zones of porous rock, the spreading of streams laterally into the porous deposits of their valleys, and the percolation of water laterally from the ocean or lakes into materials of the shore. Falling raindrops strike trees, bushes, and grass that cover the soil. The humus acts like a blotter which holds the water for a time, during which the roots of growing plants absorb some of the moisture. The plants use water in their life processes, and then return it to the air. The rest of the water trickles down through the topsoil. Some of it usually penetrates deeper layers of soil and rock where it forms useful stores of ground water.

Ground water has several advantages over surface water. It is usually more accessible; it may be reached within a few hundred feet of the place where it is to be used, whereas surface water may require pipelines and rights-of-way over stretches of several miles. Ground water may be available for use in areas where the supply from streams and lakes is very limited or has already been appropriated by other uses. Yield from wells and springs is generally a more dependable source because it fluctuates less than stream flow in alternating wet and dry climatic cycles. Ground water is more uniform in temperature and soluble mineral load than surface water, and it is generally free of turbidity and bacterial pollution. Thus ground water is also an important source of water and must be conserved as well as the surface water.

The utilization of ground water might be increased significantly above the limits set by natural replenishment if flood waters or other surplus water could be used to increase the replenishment artificially. Thus a coordinated program of flood control and artificial recharge might serve the double purpose of preventing damage from too much water and storing it until it can be used beneficially.

Nature has many ways of conserving water and of controlling it to prevent too-rapid evaporation or runoff from the land. Trees, grasses, and other plant life play an important part in the natural circulation of water and thus in its conservation. Without plant life the water would run off as rapidly as it falls, taking away valuable topsoil, causing erosion and floods, and leaving little water for man or vegetation.

Nature's process allows waters to move in an endless cycle from the atmosphere to the land or oceans and back again. This cycle, however, is interrupted by the storage of the water in plant life, in natural or artificial lakes, in the soil, or stored in the porous rocks or cavities of the earth.

Man often upsets the water balance in his desire to grow more crops. He drains ponds, swamps, and other lands. He plows under the natural sods, cuts timber, and dredges, and straightens streams. These changes lessen the natural storage of water and spread its movement off the land. As a result much of the water falling as rain or snow finds its way to the oceans without having given its full service to growing things. This hurrying away of water results in soil erosion and floods.

When water shortages occur, it is not necessarily the fault of nature; but it is rather the lack of foresight and bad usage of this valuable resource by man. Man often neglects to return water to the earth to replace that which he has used. When man disturbs the balance of nature, he must establish a new balance. If he returns nothing to nature, he finally destroys both nature and himself.

In many places the water supply has been exhausted or lessened by the lack of conservation practices or waste. Towns and cities often get their water supply from lakes and rivers, and they sometimes dump sewage and garbage into them. This makes the water unfit to drink. Water pollution is a serious problem. Even ground wells can become polluted through wastes seeping into the soil around the water supply.

Since man uses so much water in so many different ways, it is indeed an absolute essential to his life. Although water seems to be inexhaustible, there is not enough of it in some places and too much in others. Thus man must conserve water if he is to have it for his many needs when it is necessary.

Conservation simply means using the natural resources of the world wisely. Man must remember that the world's gifts are not his alone. He only borrows them for a lifetime. The conservation of water not only is an essential thing for the present generations but also is a moral obligation to the future generations of man.

America Doesn't Surrender

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. LOSER. Mr. Speaker, I have just read a very timely editorial which appeared in the Nashville Banner on August 14 and I am including it in my extension of remarks as I believe each Member of Congress will be interested in reading what this newspaper has to say about the rumor that the United States is studying "the possibility of surrender in a nuclear war."

The very thought of surrender in any war is repugnant to every American and this rumor should certainly be dispelled once and for all.

The editorial follows:

AMERICA DOESN'T SURRENDER

Of the planting of rumors and the moronic speculation of defeatist theorizers, apparently there is no end. But President Eisenhower has moved swiftly to check and demolish, a-borning, one that could only have hatched in the incubator of idiocy. It is the report that "officials" are studying the "possibility of surrender by the United States in a nuclear war."

Granting that such is purely academic, it would violate every premise of fact and conscience on which principle, courage, and conviction rest. It angers not only the President, but every American who has fought for liberty.

The Chief Executive did not stand before the world yesterday as an exponent of appeasement, or as one thinking in terms of compromise with the forces of murderous destruction. Neither he nor his Nation has subscribed to any surrender theory, and does not now. Nor does defeatism, even as a theory, figure in the contemplation of any task ahead—even if the time should ever come that as the defender of human liberty America stands alone.

It is not surprising that the very mention of such defeatist speculation, however theoretical, incensed the President to the boiling point. The overwhelming majority of 170 million Americans share his anger. Anyone giving credence to this poison of heart and spirit, calculated to beget premonitions and doubt, is a candidate for the booby-hatch and overripe for it.

The Importance of Water Conservation

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. ROGERS of Texas. Mr. Speaker, I request unanimous consent to place in the RECORD the third place essay entitled "The Importance of Water Conservation," sponsored by the Panhandle Underground Water Conservation District No. 3. This fine treatise was submitted by Mr. Cloyd M. Bender, Jr., of Panhandle, Tex., who was awarded $50. His laudable treatment of the subject matter is commendable as is the vision evidenced by Mr. Felix Ryals, manager of the water conservation district, and the members for undertaking this competition.

The essay follows:

WHY THE IMPORTANCE OF WATER CONSERVATION?

(By Cloyd M. Bender, Jr.)

The farmer is endowed with God's most precious gift which is our soil. Productive soil is God's most priceless gift to man. It is the one thing that all living things must depend upon for their livelihood. It is the farmer that has always been responsible for the caretaking of this soil. When God created the earth he also made a balanced cycle which would supply the necessary water to keep the soil fertile. The cycle has been badly hampered due to men's frequent misuse of the soil with his sharpened sticks, axes, plows, and fires; he has unintentionally aided the process of erosion. This erosion, which is connected so closely to water conservation, has furnished the pathway for much of our precious water to flow down. A great deal or perhaps all of this water could have been used to aid in God's cycle of supplying water to our soil, had it only been conserved.

It has only been in recent years that man has learned to conserve this water and put it to good use. This has been accomplished in many ways and on all scales, from the Hoover and Grand Coulee Dams, to the small reservoirs on the individual farms. Regardless of the size of these projects they all have one thing in common; they all have been a step in the right direction in conserving our water.

Because our modern society has brought heavy demands upon the Nation's war resources, the need to conserve them is now generally recognized. This recognition has been a step in the right direction.

But clearly much more is required for the sound development, wise use, and protection of these resources. We require, for one thing, much more technical and common knowledge.

Because we are still lacking in this knowledge, the effective use and conservation of our water has been hampered. We do not yet know enough in exact terms about the water resources available to us, the use currently made of water throughout our Nation, and specifically our farmlands, or the effect on our water supply. One thing that we are sure of is that a tremendous amount of water could be conserved if we only had a Canadian River Dam.

Of all our water resources, least is known about those which are underground. This lack of knowledge has hampered their effective development, as well as use and conservation. In some areas demands for ground water have increased even faster than for surface water; ours, of course, is one of those areas. Because of this tremendous growth in the use of ground water, many startling news reports have appeared in the papers and on the airwaves about the situation in certain cities and other areas. One of those cities is Amarillo and one of those areas is the Panhandle of Texas. In our area the water-level trend in most wells has been steadily downward for several years. There are several areas across the Nation facing the same problem that we are. This problem is that our ground supply is being generally depleted and may be exhausted within the lifetime of the present generation. This is a startling fact, but it is one that we must not overlook.

The serious problems of ground-water shortage are in areas, like ours, where water is pumped out faster than the entire ground-water reservoir is replenished. Under these conditions the reservoir is being emptied of water that may have taken decades or even centuries to accumulate, and there is no possible way of replenishing this supply unless conditions change. All of these problems result in what is known as an overdeveloped area. An overdeveloped area is, of course, an area where too much of the water is taken from the ground such as ours. A few ground-water reservoirs receive very little natural replenishment. Some are in deserts where replenishment occurs only after exceptional rainstorms that may be several years apart; others are almost completely sealed off by clay or other material that impedes entry of water from precipitation or from other sources. The water in these reservoirs can hardly be classed as a renewable resource. Where the quantity stored in them is large, there is a real problem involved in development: should the water be extracted for maximum benefit of our generation, as minerals and other nonrenewable resources are mined, or should the pumping be limited to the places where the supply can be replenished rapidly. These are a few of the many problems before us; there are also a few answers but they are not simple.

Corrective measures, already applied in certain areas include prevention of waste, prorata reduction of pumping from all wells, prohibition of further development, reclaiming of used water, and importation of water from other areas. Some of these practices could never be used in our area but those that are feasible must be utilized. It seems to me that the best answer to water conservation would be this: use what you need, and make sure that you have a need for what you use.

TVA a Costly Burden on Taxpayers

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. MOORE. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD a statement which I made before the House Committee on Public Works on July 30, in opposition to the TVA revenue bond bill S. 1869.

As I indicated on that occasion, this legislation if enacted could prove to be one of the most costly mistakes ever made by the Congress, and would impose further burdens on the taxpayers in addition to the billions of dollars which TVA has already cost this country.

The statement follows:

STATEMENT BY HON. ARCH A. MOORE, JR., FIRST DISTRICT, WEST VIRGINIA, BEFORE COMMITTEE ON PUBLIC WORKS, UNITED STATES HOUSE OF REPRESENTATIVES, JULY 30, 1958

Mr. Chairman, ladies, and gentlemen, I appear in opposition to Senate bill 1869. My opposition to this bill is based primarily on the unfair competitive situation in which others parts of the United States find themselves when competing for the location of new industry with the TVA. My position is so clearly stated by a news story appearing in the Wheeling News-Register of February 20, 1956, that I would like to quote this story in is entirety:

"VALLEY TAXPAYERS GIVE INDUSTRY TO ALABAMA—$75 MILLION PLANT LOST BY WEST VIRGINIA TO TVA REGION

"(By Haze Cochran, News-Register staff writer)

"Ohio Valley residents helped pay to keep a new $75 million aluminum industry from locating in West Virginia.

"They didn't realize it—but even if they had, they couldn't have done anything about it.

"The decision was made in Washington.

"It's the age-old story of government subsidy versus free enterprise and fair competition.

"The News-Register learned today that the Reynolds Metal Co., the second largest aluminum company in the United States decided to locate a huge aluminum plant in TVA territory rather than along the Ohio River, south of Point Pleasant, probably because of the cheaper, Government-subsidized power available at Lister Hill, Ala.

"Philip Sporn, president of the American Gas & Electric Service Corp., told the News-Register his firm was 'working on' locating the new industry in West Virginia.

" 'We were not successful. Reynolds told us that our power rate was too high. I can't say that is the real basis, but it was one given.'

"Sporn said the American Gas & Electric gave Reynolds a 'good rate, the same rate we offered to Kaiser Aluminum and Olin-Mathieson.' But, he added, there was a large tax component in the American Gas & Electric rate.

" 'They (the Reynolds officials) told me the TVA rate was lower.'

"Further evidence of the manner in which the Reynolds plant was lost to West Virginia because of a Government-subsidized power project is found in a letter sent West Virginia Senators Matthew M. Neely and HARLEY M. KILGORE by M. C. Funk, vice president of the Appalachian Electric Power Co., a member firm of American Gas & Electric.

"In his letter, Funk points out that 'I feel sure you will be interested in knowing about the latest instance of the pulling of industries into TVA territory. This one greatly concerns West Virginia.'

"According to Funk, the 'Appalachian Co. had been approached by Reynolds Metals Co., now the second largest aluminum company in the United States, with regard to a proposed aluminum plant in the Ohio Valley.

" 'The required 225,000 kilowatts of electric power was to be furnished by our company. Of course, power is a principal element in aluminum cost.'

"Funk pointed out that the site of the Reynolds aluminum plant was to be at Apple Grove, W. Va., some 10 miles below Point Pleasant.

" 'In the meantime, however,' Funk told the Senators, 'the Reynolds Co. was negotiating with TVA. We knew this and did our utmost to land the business for our system and West Virginia.

" 'In fact,' he stated, 'our quoted price for power exceeded the TVA price by only one-third of the difference between the taxes which we have to pay and the scant tax contribution which TVA makes.

" 'Nevertheless,' Funk's letters to Neely and KILGORE continue, 'the Reynolds Co. has announced that it will locate in Alabama, with power to be supplied by TVA. It is reported that this new Reynolds plant will cost about $75 million.'

"In concluding his letters to the Senators, the power firm official notes that 'as a consequence, TVA will now somehow have to get the money for and to build more steam electric power—which, of course, will enable it to do more of this same sort of thing.'

"And the same sort of thing will mean that tax dollars, from residents of the Ohio Valley, West Virginia, and Ohio as well as the rest of the Nation, will aid the TVA cause.

" 'Competition in which a substantial protion of the tax component is eliminated can be very deadly,' Sporn commented.

"The American Gas & Electric president pointed out that 20 cents of every dollar private electric firms receive for power service goes to the Government.

" 'Excluding the tax component, we can give them (industry) a better rate than TVA or any of the public power installations. The people are being asked to develop the power in TVA.'

" 'When it comes right to the point,' the head of American Gas & Electric stated, 'West Virginia is going to have to fight for industry.'

" 'But the State shouldn't have to fight an agency which has the weapons.'

"He explained that the TVA, through Government subsidy has the weapons to attract industry in the area around such installations.

" 'Why should the Government so equip other States?' he asked.

"Sporn pointed out that West Virginians should naturally be against Government power projects. 'They're in the disinterest of the State.'

"The power official pointed out that West Virginia today is in wonderful shape to attract new industry with its abundant availability of coal and manpower, but it's going to have a tough time meeting Government subsidy.

"There have been other instances of new industry being lost to the Ohio Valley and West Virginia because of Government-subsidized power projects. The Reynolds plant is merely most recent.

"In an address delivered as part of the Cooper Foundation Series at Swarthmore College in 1954—but which is as 'valid today as on the day it was made'—Sporn pointed out that 'a basic difficulty with public power is that it is subsidized power and that cannot be in the public interest.'

" 'The most common form of subsidy of public power is the tax route. Interestingly enough, it is now being claimed that public power operation is more desirable because it can be carried out without paying taxes.'

" 'It is quite clear that tax savings as such do not exist.'

" 'So-called savings, by going to a governmental setup, merely result in the general taxpayers, rather than those benefiting from the project, paying in additional taxes the subsidy granted the tax-free power project. A general application of the tax-free subsidy principle would result in complete disorganization of all government.'

"Sporn labeled the tax differential an irresistible magnet which draws industries requiring particularly heavy quantities of electric energy 'from other locations that but for taxes are equally as well situated and might perhaps otherwise be even more favorably situated'."

Representative William E. McVey

SPEECH
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. SHEEHAN. Mr. Speaker, the very high respect and esteem in which our late colleague from Illinois, Representative WILLIAM E. MCVEY, was held, is probably best evidenced by the editorials in the Chicago Daily Tribune and the Chicago Daily News.

The Chicago Daily News of August 12 featured the following editorial:

REPRESENTATIVE W. E. MCVEY

The sudden death of Representative WILLIAM E. MCVEY has deprived Congress of one of the stanchest advocates of Government economy and sound money.

His career illustrates the fact that a well-educated man is capable of holding conservative economic views and fighting for them effectively.

He was the valedictorian of his class at Ohio University, and a Phi Beta Kappa. He was a master of arts and a doctor of philosophy at the University of Chicago.

He was himself a distinguished educator. As a young man, he was a school superintendent in the Philippines. For many years he was superintendent of the Thornton Township High School and Junior College, and once served as president of the North Central Association of Colleges and Secondary Schools.

For a few years before he entered Congress, he was professor of education at De Paul University. He was the author of several books and magazine articles in the fields of education and economics.

A year ago, Mr. MCVEY announced that he would not seek reelection in 1958, when he would have completed four terms. He was, however, persuaded to change his mind. He was renominated in the primary and would probably have been reelected.

The Republican Party should make a diligent search for a man of equal qualifications and stature to take his place.

The Chicago Daily Tribune of August 13 editorialized as follows:

WILLIAM E. MCVEY

The death of Representative WILLIAM E. MCVEY is as great a loss to honest Republicanism as it is to his constituents. Mr. MCVEY represented the Fourth District of Illinois, comprising part of Chicago and its

southern suburbs. He was a Member of Congress for nearly 8 years.

His constituents had learned to love and respect him during the 28 years he was superintendent of Thornton Township High School and Junior College in Harvey. He was chosen by a caucus to challenge the Democratic incumbent in 1950, and won easily with the support of Democrats as well as Republicans. He wished to retire in 1956 and again this year, but both times he was persuaded to run again.

In Congress, he devoted himself in his own words "to the perpetuation of those freedoms which have made this country great." He fought the socialistic tendencies of the New Dealers and their disciples. As a lifelong educator, he saw the dangers of Federal aid to education; as a former tax assessor, he opposed ever-mounting taxes, which he described as "like icebergs. We see only a small part of them." The country can ill spare men of his courage and sense.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting an editorial which appeared in the St. Louis Globe-Democrat of August 15, 1958, which is a very well reasoned editorial on the subject of Federal Aid to Education. I believe that it should receive wide circulation:

OUR FEDERAL AID TO EDUCATION

America's answer to the Soviet school system is now being given its finishing touches on Capitol Hill. This is the bill to provide about $1,000,000,000 to $1,500,000,000 to improve the teaching of language, science, and math in our high schools, to provide thousands of Federal college scholarships, and to seek out the able high-school students and try to persuade them to set their course for a college degree.

If this proposal is approved, it will be the nearest thing to a general education aid measure to come out of Washington since 1862. That was the year when the Morrill Land Grant College Act made the State colleges possible.

In its final form, it is expected that the bill would provide for 10,000 Federal scholarships a compromise between the Senate figure of 23,000 and the House figure of none. These would be based on need, White House insists.

In the past, proposals for Federal aid to help build public schools failed because Congress refused to open the door to Federal invasion of the field of education. By a wise tradition, the building and support of the public schools have been a State and community responsibility.

The 1958 bill has a better chance of passing because it is aimed at encouraging more high-school students to go to college and to take more science and math courses. This idea has an immense, popular appeal since the United States Office of Education published a report last November that said the Soviet Union is outstripping us in every scientific phase of education and some other phases as well.

One of the most unhappy aspects of this Federal education bill is the easy, but dangerous assumption that all problems in the United States can be solved simply by spending a little more money.

There is no doubt that education in the United States, at the high-school level especially, is badly in need of an overhaul. There are too many snap courses, not enough incentive to take the more difficult subjects and a failure to exploit fully a revolutionary new educational tool—TV. The question is, Will spending $1 billion to $1.5 billion of Federal money bring about reform? Or will it simply postpone the day when economic necessity might otherwise compel educators to make the reforms.

Russia, it should be pointed out, was spending 68.4 billion rubles a year on its educational-cultural activities in 1955, when the Americans were spending $15.5 billion on all forms of education, from grade school to the college or university level, the United States Office of Education report stated.

Since the Russian ruble is worth anywhere from about 6 to 10 cents American, the Russians were spending only about $4.5 billion to $6,840 million a year on education—or about a third of what we were.

It isn't just how much we spend, but how well we spend it that will determine whether or not we can bring about the needed revolution in our classrooms.

In Defense of the VFW

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. DEROUNIAN. Mr. Speaker, my good constituent, Mr. Jack Kluger, Nassau County commander of the Veterans of Foreign Wars, has asked that I insert in the Appendix of the RECORD the following letter which he recently addressed to one of our local newspapers and which appeared in its August 11 issue:

IN DEFENSE OF THE VETERANS OF FOREIGN WARS

ELMONT.—The Veterans of Foreign Wars of Nassau County take sharp issue with your editorial of June 30, entitled "The Privileged Veteran." The reliable American veterans organizations have been the one voice consistently promoting legislation to assist veterans ever since the unfortunate conditions which developed after the First World War.

The VFW has never asked for, nor received, as a point of fact, privileged treatment for veterans. All that ever was asked of a grateful Nation was an opportunity for the returning serviceman to rehabilitate and reestablish himself in civilian life. This was done through hospitalization, subsidized college training, veteran guaranteed mortgages, etc. These measures were part of a planned program to put the ex-GI back, at least in part, on an even plane with his civilian counterpart. This goes for the veteran who spent his time on the front line, as well as those "10 veterans who served far behind the line."

We further recognize that there are those who would abuse the benefits given to veterans. We neither condone this action nor expect to be held responsible for it. It should be remembered that although veterans organizations pioneered the whole program of veterans benefits, membership in a veterans organization is not a prerequisite to participate in all veterans benefits.

Contrast this sharply to the 30 days a worker has to join a union or be barred from all benefits of employment in that industry. We certainly would never want this restriction, however, it should be borne in mind before so many free swings are taken at veterans organizations. Actually, veterans benefits are only one phase of the program of the VFW. The principles and objectives upon which the VFW is founded are both patriotic and fraternal. However, first and foremost, the VFW epitomizes "Love of Country and Devotion thereto," and that is why your editorial was so distasteful. The editorial not only showed a complete lack of understanding of the functions of a veterans organization, but the editorial itself, contained at least a half dozen distortions. This the VFW considers unpardonable by a vehicle representing itself as a responsible segment of the press.

JACK KLUGER,
Nassau County Commander,
Veterans of Foreign Wars.

State Department Blunders Hurt Coal Industry

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. MOORE. Mr. Speaker, with each passing week, I become more and more concerned with the inefficiency, ineptitude and indifference of the State Department in deals which ultimately affect the domestic economy of our Nation. It is quite apparent that many of the persons employed in the State Department either have never taken a course in basic economics, or else they have become so enmeshed in nebulous webs of foreign intrigue that they have no time to concern themselves with the effect which their activities or inactivities may have upon the United States of America.

Several weeks ago, I called attention of the House to the fact that France has been using foreign-aid dollars to purchase coal produced by the Soviet Union. This fact was called to the attention of the State Department which turned a deaf ear to the complaints of thousands of coal workers in West Virginia and throughout the Nation, whose jobs have been usurped as a result of these foreign giveaway policies. I have protested against these policies in the best manner I know how by voting against the foreign-aid authorization and appropriation bills, and I will continue to fight any program which will sacrifice the jobs of American workers and destroy our industries simply for the purpose of pursuing a course which has failed to either win us friends or improve the security of our Nation.

At this time I would like to call attention of my colleagues to a letter sent on August 12, 1958, to the Deputy Under Secretary of State, Douglas Dillon, by that stanch defender of the mining industry in America, Mr. Joseph E. Moody, president of the Southern Coal Producers Association. Mr. Moody, in his inimitable manner excoriates the State Department for its continued inactivity in dealing with the matters of foreign policy

which vitally affect the economy of our country and the coal industry in particular. I wholeheartedly endorse Mr. Moody's letter and urge all Members of the House to read and subscribe to the philosophy espoused therein.

The letter follows:

SOUTHERN COAL PRODUCERS ASSOCIATION,
Washington, D. C., August 12, 1958.

Hon. C. DOUGLAS DILLON,
Deputy Under Secretary of State, United States State Department, Washington, D. C.

DEAR MR. DILLON: I am writing you with reference to certain actions and policies of the Department which have had a most detrimental effect on the maintenance and growth of overseas markets for American coal. No segment of the domestic coal industry depends so greatly on exports for its economic health as do the southern fields, located in West Virginia, Virginia, Kentucky, Tennessee, and Alabama, which supply approximately 85 percent of these shipments. The great majority of producers in these fields are members of this association.

Where coal is concerned, the Department seems to have abandoned its traditional role of fostering United States interests abroad. Last year, for example, it raised no question when some $4 million was advanced to the U. S. S. R.'s Polish satellite for purchase of coal-mining machinery, equipment patently destined to improve productive capacity so that Polish coal could compete even more successfully with our coals in the world market. Obviously, and rightly so, if United States coal producers were to go to the Government for aid in purchasing coal machinery, they would have their requests rejected. Yet the funds for Poland came from the President's special fund, which, with the Department's guidance, Congress made available to him to use to further this country's interests abroad.

In Argentina, the United States recently authorized a $60 million loan for a steel plant, and is considering an additional loan request of $40 million. Nowhere in the loan agreement, negotiated or pending, is there a stipulation that the plant should obtain even a part of the coal for its operating requirements from the United States. Not only that, but Argentina now has a 4-year barter agreement to import 2 million tons of Polish coal and it is not improbable that Argentina, which we supplied with over 1½ million tons in 1956, will now turn entirely to the Communist bloc for its coal.

These examples of how the State Department's policies are curtailing our foreign trade in coal are evident. Not so obvious are those instances where countries which we are aiding fail to reciprocate our friendship and, directly or indirectly, use these funds for coal purchases outside the United States or even in the Communist bloc.

We give substantial aid to Japan and yet I understand that recently 12 cargoes of coal were purchased by the General Services Administration for Japan—financed, of course, by American dollars. Eight of the 12 cargoes were awarded to Australian producers, and only 4 to the United States. This, despite the fact that the coal industry in our country has had a production decrease this year of approximately 25 percent—with resulting idle time for coal miners and a general recession of all business in coal mining areas.

A bill to end, or at least moderate, such activity was proposed during the current session of Congress in the form of the so-called Payne amendment to the Mutual Security Act. This would insure that at least 50 percent of United States aid funds for procurement of commodities, including coal, for foreign use would be spent in the United States. The State Department strongly opposed this measure and the amendment failed of passage.

On June 19 of this year in Brussels, the Department and the Atomic Energy Commission signed jointly the so-called Euratom agreement, which, if implemented, would provide many millions of taxpayers' funds to subsidize a gigantic reactor-construction program for Europe.

Since reactor construction and operating costs are many times those of conventional fuels and electric power station equipment—about 10 times those of coal-burning plants in this country where reactor techniques are probably most advanced—we would not only be casting away part of an annual market for 40 million tons of American coal, but simultaneously levying upon the pockets of every taxpayer in the United States to make up the losses on this astounding investment.

I am taking the liberty of enclosing a copy of a letter which I have just sent to the chairmen of the Senate and House Appropriations Committees detailing the consequences of such an irrational course.

The Department's lax attitude where this country's basic and most plentiful fuel is concerned, does not end here. In the case of residual oil, which is dumped at east coast ports, imports now displace more than 41 million tons of coal annually. These imports are being dumped by a cartel which has been charged by the Justice Department with conspiracy to violate the antitrust laws. The case still is pending after 5 years.

The actions which I have mentioned unfortunately lead to the conclusion that the Department of State—wittingly or unwittingly—pursues a calculated policy of indifference and neglect where the health of the coal industry and the hundreds of thousands of workers and their families dependent upon it are concerned. Partly as a consequence, production is down, exports are down, and thousands in the industry are jobless. This constitutes neglect of these vital national resources when Soviet coal production has for the first time exceeded our own and the U. S. S. R. is embarked on an energetic campaign to increase its coal production 10 percent a year for the next 5 years.

From all indications, the State Department has been extremely solicitous of the welfare of our oil industry. It would be helpful, indeed, if the Department also would review its coal policies in the light of these representations.

Specifically again, it can:

1. Reevalute, in the light of their impact at home, its policies respecting: (a) Unrestricted loans and grants; (b) residual oil imports.

2. Carefully determine where American aid funds are spent, and, whenever possible, encourage a spirit of reciprocity through coal purchases in the United States.

3. Recognizing that Europe is basically a coal economy, reevaluate the need for an extravagant and self-defeating program such as Euratom.

4. Encourage and be alert to opportunities for mutually beneficial barter arrangements involving United States coal.

I am sure members of the industry would be happy to discuss personally, in detail, these recommendations.

This letter is sent to you on the instructions and with the unanimous approval of the board of directors of Southern Coal Producers' Association in regular meeting, August 11, 1958.

Respectfully,

JOSEPH E. MOODY,
President.

The Advantage of Lath and Plaster

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. OSMERS. Mr. Speaker, safer, better homes are a continuing national objective. Many believe that lath and plaster offer advantages in safety, appearance and wear for interior walls and ceilings over so-called dry-wall construction.

Recently I received a letter on this subject from Joe M. Baker, executive director of the National Bureau for Lathing and Plastering, Inc., whose organization is making a sincere effort to educate the American people regarding the need for and desirability of better quality homes through the use of permanent and fireproof materials. Because of the wide interest in the subject, I include his letter in full in the Appendix of the RECORD, where his thoughts will be available to all of the Members:

NATIONAL BUREAU FOR LATHING AND PLASTERING, INC.,
Washington, D. C., June 30, 1958.

Hon. FRANK C. OSMERS, Jr.,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: I personally want to take this opportunity to thank you for your telegram addressed to us at our annual convention in Minneapolis, Minn., congratulating us on our program to educate the public to build better homes—homes for the future, instead of slums for the future.

Not only do we have to educate the public but it is going to be necessary to educate the Congress and all the Federal agencies that handle construction that there is no substitute for any type of building materials, especially for genuine lath and plaster. Our Government agencies have established a minimum specification for interior walls and ceilings consisting of one-fourth inch plywood, three-eights inch and/or one-half inch drywall, whereas if genuine lath and plaster is used it requires three-eights inch gypsum lath plus one-half inch of plaster, resulting in a wall and ceiling thickness of seven-eights inches, which is permanent construction and is fireproof. Compare seven-eights inch of lath and plaster with other materials ranging in thickness from one-fourth inch to one-half inch and from measurements alone, lath and plaster is far out in front.

Our Government agencies gave no consideration whatsoever to fire protection in private homes on which the mortgage is guaranteed by the FHA, the VA, nor on the Capehart housing projects.

The appalling waste in many human lives and general productivity which results from substandard housing is the greatest single strain upon our national economy.

No economy of materials can justify exposure of a child to the terrible hazards of fire. No flexibility of building use can explain the use of inflammable material to a parent suffering the anguish of knowing that a loved youngster has suddenly and agonizingly been forever stilled by searing, spreading flames, that might have been avoided. We call your attention to the fire that occurred in a Navy housing project in San Diego, Calif. Three children lost their lives

in this fire. There was another fire at Columbus, Ohio, where three children died as a result. There was a slight saving in the original building cost by using substitute materials for walls and ceilings. But, how could this saving be compared with the lives of these loved ones?

Plastered walls and ceilings are a tried and tested building material which have earned 1- to 4-hour fire-resistant ratings from the underwriters laboratories, which can be employed with economy to protect the lives and health of all occupants—not only of homes but also of schools.

The last Congress appropriated an extra $3,000 per unit to be used in construction of Capehart housing to make these projects more livable.

In several instances where there have been sufficient funds to accept the alternate of lath and plaster the agencies have failed to do so stating that they could not justify spending the money just because it was appropriated. We contend that the most important consideration to be given in the construction of these projects first should be the protection of those who occupy same; and second, the maintenance costs should be taken into consideration.

We have in our files a letter from the Air Force written to one of the United States Senators in which he states:

"Over a period of years experience indicates less maintenance and repair costs by the use of lath and plaster. Initial hair and similar cracks are expected but these are easily and inexpensively patched up by painters at the time the house is redecorated. It should be noted that although the use of drywall has many advantages it is not completely trouble free. Settlement of exterior walls and partitions, or shrinkage of lumber, may cause popping of nails at ends of panels with resultant cracks at taped joints. Hard usage may also result in panel damage requiring complete replacement. Repairs of these types of damage require expert mechanics whose wages, combined with material costs, are more expensive than the repair of plaster damage."

Sincerely yours,

JOE M. BAKER,
Executive Director.

H. R. 8002

SPEECH
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. DOOLEY. The enactment of H. R. 8002 as revised by the Senate will furnish a needed implement for Federal auditing. There has been a tremendous demand for a more meticulous check on the Federal system of expenditures, motivated in large part by the Citizens Committee for the Hoover Report. The attitude of this group is understandable in the light of the huge reserves of unobligated funds in the pipelines each year.

The other body amended the original piece of proposed legislation in such a way as to bring about these modest revisions: They inserted permissive language so that where Congress sees fit it may authorize the transfer of expenditures from one category to another insofar as it is deemed feasible. It—the amendment of the other body—clarifies the intended wish of the House legislators that contractors be paid promptly for services rendered within a fiscal year even if the payment is not made technically before the close of that fiscal year. Lastly, the other body deleted two lines of the bill which would have permitted in an appropriation bill a recision, or reappropriation, on a transfer.

In effect the bill as returned from the other body is substantially the same as previously approved by the House by a tremendous majority.

Everything considered, this bill is simply permissive legislation and it is entitled to a trial. If it proves too costly or ineffective it can be dispensed with by the Congress. If it works it will improve expenditure limitations so that the House may control not only obligating authority, but continue expenditures as it did before it departed from the contract authority principle. When it did that it left the rate and time of expenditure in the hands of departments and agencies, and gave up its control in any given year to a balanced budget.

With the debt ceiling having to be lifted to a new high of $288 billion, it looks as though a balanced budget is out of the question for some years to come. But it is a goal devoutly to be wished for and eventually attained.

The passage of H. R. 8002 will have a good effect on many citizens who will at least realize that Congress is trying to be judicious in its bookkeeping.

Transportation Act of 1958

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. OSMERS. Mr. Speaker, often when legislation is being considered by the House, dire predictions are made by individual Members as to the impact of the legislation under discussion. Sometimes the House is persuaded by these predictions and sometimes not. A few weeks ago the House had under consideration the Transportation Act of 1958, the so-called railroad assistance bill. Just prior to passage I specifically warned the Members from the New York metropolitan area and a few other commuting localities that the bill would produce disastrous results. Members of the Committee on Interstate and Foreign Commerce, and some others, scoffed at my warnings. The bill passed, however, and was signed into law by the President on August 12.

Only one Member of the House, in addition to myself, saw fit to vote against the bill.

Unfortunately, confirmation of my worst fears was not long in coming. Practically at dawn, on August 13, the day following the President's signing of the bill, the New York Central Railroad posted abandonment notices announcing the termination in 30 days of its West Shore ferry service between Weehawken, N. J., and New York City. These notices had obviously been prepared long in advance.

Unless the ICC should intervene, on September 13, this century-old vital transportation link will be entirely abandoned under the new section 13A of the Transportation Act of 1958. This section grants the railroads the power of abandonment, after posting notice, and at the same time takes away from the public and the community any specific rights to intervene which may have existed prior to the passage of the act. The same situation exists with respect to Erie Railroad ferry service between New York and New Jersey.

There are a few loosely organized commuter groups which are working in conjunction with several municipalities; the Bergen County, N. J., governing body; and the attorney general of New Jersey in an effort to prevent the catastrophe which will befall thousands of innocent people should these facilities be abandoned. With what limited resources are available to them, I am sure that every effort will be made to have the ICC suspend these abandonments while the unfairness and unconstitutionality of these provisions in the Transportation Act can be established in the courts.

In its haste to bail out the railroads, Congress has ridden rough-shod over the future of many of our people. The economic disturbance, possible loss of employment, and the major congestion of highways, bridges, and tunnels that will be caused, is impossible to estimate at this time. In the future, it might be well for Congress to consider, in this connection, individual rights as well as the financial needs of the railroads. I favor helping the railroads, but it should not be done unless those affected are given the right to protect themselves.

The underlying value of every home and business in northern New Jersey is threatened by these abandonments. Every person, community, and county in that area should immediately give full support to those leading the fight for continued rail and ferry service.

If justice cannot be obtained from the ICC or the courts, then Congress must amend the act and fully protect these innocent citizens.

Tenth Anniversary of the Founding of the Republic of Korea

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. BRAY. Mr. Speaker, we note today the 10th anniversary of the founding of the Republic of Korea.

A fateful and eventual 10 years have passed in the life of the Asian republic which has been our close friend, and our

ally in combat. Starting from truly humble beginnings among the destruction left by war and long foreign occupation, this ancient land of honorable people hardly had established their goals and objectives before they were invaded and forced to defend at great cost and sacrifice their homes and their liberties. They were assisted by many free nations, and greatly by the United States, for the sinister force which threatened their independence was the same one that threatens the liberties of freemen everywhere.

After the end of the fighting, the Korean people again turned to the tasks of developing a country which, although without great wealth, does have many resources. Not the least of these resources is the spirit of the people and a determination to find their own way and be accountable only to their own national conscience.

My interest in the progress of Korea is more than casual. I served in military government in Korea from October 1945 to July 1946 when this brave country was attempting to formulate an economic and governmental stability that would represent their needs and would permit them to take their place as a free nation among other free nations of the world. I have returned to Korea several times since then so that I am able to attest to the steady progress that they are making. In this country I am one of the directors of the American-Korean Foundation.

They are making progress. They live still in the shadow of the evil which almost engulfed them. We may find it difficult to fully understand them at times, for our Nation, even in its struggling years, did not know the kind of hazards which have beset Korea in the last decade.

We can take pride in their accomplishments, for they have demonstrated the type of national feeling which turns people to the moral dedication and objectives which free people share. Their ultimate victory will be, in part, our victory for we both seek honorable peace based on the freedom and dignity of man.

Money Grows on Our Hardwood Trees, Too

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. MATTHEWS. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an editorial from a recent issue of the Florida Times-Union, Jacksonville, Fla., which points out the growth of industries relating to our forest resources.

I am particularly delighted that as pointed out in this article we are having a furniture factory move to Live Oak, Fla., which is one of the splendid communities in my Eighth Congressional District. The editorial follows:

MONEY GROWS ON OUR HARDWOOD TREES, TOO

The forthcoming opening of a furniture factory in Live Oak directs our attention to another aspect of our forest resources—hardwoods.

Because of the work of the Georgian, Dr. Charles Herty, and others, regional prosperity has been advanced through utilization of southern pines. The burgeoning paper and pulp industry here in Jacksonville, the State and South attests to the economic activity this development has brought.

But softwoods represent only part of the potential that the South has in its woodlands. More and more there are signs that we are waking up to the value of our neglected hardwoods. The experts have been emphasizing the value of hardwoods for some time, and the sugestion has been made that Florida again investigate the feasibility of growing one of the most valuable hardwoods of all, mahogany.

The migration of the furniture industry to the South has been a spur to hardwood culture. By the reverse token, development of hardwoods will help to expand furniture making in the region.

The national center of furniture manufacturing has long since shifted from Grand Rapids, Mich., to North Carolina, and from there, it is fanning out over the South. It has been a boon to the economy, for in many instances small operations have continued to grow, while spawning satellite industries in surrounding areas.

Location of a furniture plant at Live Oak is welcome on many counts. It helps to pioneer the way in the State for another industry. Furniture making is not done on any sizable scale in the State, but there is no reason why it should be that way.

This sign of diversificatiton of the economy in north Florida bodes well too for the increased job opportunity it represents to the people of our area. Portions of the northern section of our State are deficit areas from the standpoint of population. One of the ways to check this condition is to offer new employment.

Work requiring skilled labor is always desirable, for the future of the State and South does not lie in the direction of cheap exploited labor, but in an intelligent and industrious working force.

The Live Oak venture bears watching and following up, for it symbolizes a new horizon for the area and State.

Conversion of Sea Water to Potable Water

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. DOOLEY. Mr. Speaker, water experts have pointed out repeatedly over the last few years that many areas of our country face a critical, even perilous situation if the water table continues to decline. Already water in certain places in the great State of California is being transported from a source hundreds of miles away, at considerable expense to the consumers. Were it not for the Colorado River, for example, large cities in California would be in a most trying situation.

The development of a mechanism to transform sea water into potable water has long since been successfully achieved. Fighting ships of large size, certain island possessions of the United States, and hotels on such islands as Bermuda are already equipped with devices which are successfully converting sea water into drinking water.

The writer recently witnessed a demonstration in the State of Connecticut where thousands of gallons of drinking water were made from salt water successfully and economically. A Bermuda hotel is now being equipped with a similar installation at a cost not prohibitive to its management.

The major problem today is to devise a method of producing large quantities of potable water from sea water or brackish water—as found in certain parts of the Southwest in natural underground storage—at a cost in keeping with a community's ability to pay for it.

Most processes—and there are a number of them—resort to heat as the motivating factor in conversion, and heat, whether generated electrically or by coal or oil, is expensive. The introduction of atomic energy into the process of conversion may soon come about. Another possibility is that the powerplants of littorally situated cities will be transformed for the dual purpose of supplying not only electric power for the community but even for the transformation of sea water or brackish water into potable water in vast quantities. This, of course, will be an answer to the problem facing many communities.

Whether the sea water or brackish water is converted into drinking water by means of radiation, membrane filter—osmosis—distillation, or any other way, the problem of cost is the paramount one. But success in the effort is necessary if hundreds of thriving communities are not to be changed into tombstone cities. People will have to remove themselves to areas where water is plentiful.

The chances of success have been multiplied many times by the passage by the House of Senate Joint Resolution 135 on August 12—passed Senate June 10. This joint resolution provides for the establishment of no less than five water demonstration plants designed to discover the most feasible and economic means of attaining the aforementioned objective. Once we find a means of supplying unlimited quantities of drinking water from the sea or from underground brackish deposits, man the world over will sleep better content in the knowledge that one of the basic neeessities of life is always within his reach.

The House, as well as the other body, is to be commended for the swift enactment of a most important piece of legislation.

Thoughts as Adjournment Nears

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. BYRNE of Illinois. Mr. Speaker, all of us are feeling the pressure of these crucial days of the 2d session of the 85th Congress. We have suffered many losses,

physically, and a number of our able colleagues are withdrawing to pursue other activities. Adjournment for some can be considered as graduation and for others of us, only a change until a new curriculum begins.

I would like to express my sincere good wishes to all of my colleagues and in particular to my colleagues from Illinois. I hope that between now and the time Congress reconvenes in January 1959, you will each enjoy good health, strength, and success. I extend this wish regardless of party and may each of us who desires to be returned to Congress be successful on November 4.

The purpose of our being here in this great legislative body is to serve the interests and the well-being of our Nation and more specifically, the people whom we represent, to the very best and fullest of our ability. We sought the office and we must assume the responsibility willingly. I consider it a privilege to represent the Third District of Illinois.

Many of us disagree as to what is best for our country and our constituents. We may differ as to what is the best way to accomplish our purpose. The important element is not our differences as men or as parties but our unity in desiring that, as our loyal and able minority leader, JOE MARTIN, says, "America should come first."

As long as the House of Representatives and the Senate lend themselves to the privilege of free speech, only found so abundantly in the Halls of Congress, I believe our Nation may well earn the distinction as being the only nation governed by men able to survive the myriad attacks against her, both from without but more lamentably, the attacks from within. To our children and grandchildren, let us bequeath not a spectral America but a vibrant America.

I am deeply appreciative of the following letter which our minority leader sent me:

OFFICE OF THE MINORITY LEADER,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 11, 1958.

Hon. EMMET F. BYRNE,
House of Representatives,
Washington, D. C.

DEAR EMMET: Congress is about to adjourn, and I cannot let you go home without expressing my appreciation of your personal loyalty as well as your support of a legislative program that is full of outstanding achievements.

Although we Republicans were in a minority of 30, we were the driving force that brought about most of the program of President Eisenhower. We were stalwart supporters of his splendid efforts to maintain peace, and we vigorously supported his measures to stimulate the business recovery which is now apparent. We were able to defeat some fantastic spending schemes. If we had not been successful, the country would now be headed toward disastrous inflation and possible bankruptcy. The country has profited from your judgment and courageous service.

I do hope you will be successful in your fall campaign and with additional recruits return to help solve these momentous problems that are ahead. As a capable, tested legislator you deserve the support of your district regardless of party affiliation. America should come first.

With best wishes, I am

Sincerely yours,

JOSEPH W. MARTIN, Jr.

Slums Are a Luxury We Cannot Afford

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. VANIK. Mr. Speaker, in the greater Cleveland community, Mr. Oscar H. Steiner, one of the most vigorous and enthusiastic builders of private low-cost housing, has made the clearing of Cleveland slums an almost personal crusade. His devotion and his untiring energy in this cause have made him an authority on this subject.

I want to submit to the consideration of my colleagues an article which he submitted in the Reporter magazine for November 14, 1957, entitled "Slums Are a Luxury We Cannot Afford":

CLEVELAND.—Fred and Mildred Hurns were very special sidewalk superintendents when they stood at the corner of East 35th Street and Scovill Avenue here not long ago and watched bricklayers at work on a 283-apartment development. Along with hundreds of other Negro families, the Hurnses were displaced 2 years ago from this same area by a slum-clearance project. But their visit had not been prompted by any nostalgia for their old neighborhood. They had come, with their four children, to check on the new apartment they will soon be moving into. Furthermore, they will take up residence in one of the modern fireproof apartments not as renters but as owners.

Because I am the head of the building firm that is putting up the Longwood development into which the Hurns family will move, what follows may sound presumptuous. But I honestly believe that the project, small as it is, has real significance for all communities that want to do something about their slums.

All too often slums are cleared with public funds and then the former residents are forced into other slum areas by the excessive rents of the new development. It hurts me every time I hear of a huge apartment development with rents of $25 to $40 and more per room going up in a former slum section. Unless something is done to help people like the Hurnses, the troubles that afflict the heart of almost all of our large cities will increase rather than diminish.

The Hurns family has been making monthly deposits during construction toward the downpayment for their new home. When their two-bedroom apartment is ready and they move in, they will have paid $500 down. (Sure, they'll be cramped for space by ideal standards, but they'll be less crowded than they were before or than they would be in another slum.) Their monthly payments covering interest, amortization, taxes, insurance, and all exterior repairs and services, including lawnmowing and snow removal, will be $81.50. Other families are saving toward or have made downpayments of $750 for three-bedroom units in Longwood on which their total monthly payments will be anywhere from $85.50 to $91.50, depending on the size of the rooms. These are bargain-basement prices in Cleveland, where construction costs are high. Two other firms are working in Longwood on more conventional rental projects, and this is progress too. But I think it is interesting that those who are paying for their own apartments will be paying substantially less than those who rent.

We learned from an earlier project that the average family income of a purchaser is $4,100 a year, only about $700 below the national median and a thousand dollars under the median for city dwellers. And yet after years of living in deteriorated, jampacked slums most of the purchasers had almost given up hope of ever renting, let alone owning a decent home of their own. We have experienced practically no turnover; even more, there are no delinquencies.

Two years ago the city of Cleveland, with the help of a Federal grant of more than $2 million, bought for demolition the tattered tenement the Hurnses had lived in on East 35th Street. The houses in the neighborhood were predominantly frame, and most of them hadn't been painted in years. Maintenance consisted of patches on patches. Originally single- and double-occupancy houses, they had practically all been converted to multifamily occupancy—some with families of 6 or 8 persons living in a single room and sharing bath and kitchen facilities. The Hurnses paid $15 a week for 3 rooms. Some families paid more, some slightly less, but the rates were almost uniformly exorbitant, although not at all shocking to anyone who is in any way familiar with the economics of Negro slum property.

HOW TO MAKE SLUMS

Along with a sizable number of the 1,200 families who once lived in the section, the Hurnses were relocated into the Cleveland Hough neighborhood. There they had to double up again in a house in an area that is already caught in a familiar pattern: overcrowding, heavy wear and tear on already neglected buildings, climbing rents, growing crime and delinquency, an increasing tax burden on the entire city—in short, new slums while the old were being cleared. The police call this area the Jungle.

The rapid growth of new slums means that Cleveland and cities like it are getting nowhere fast in a desperate race that will exhaust the earnest dreams of the planners and the bright hopes of the city administration.

Of the $1.5 billion industrial expansion enjoyed by the Cleveland metropolitan area in the postwar years, $1 billion worth has been located in the suburban municipalities. Most of the new houses have also been built outside the city limits.

As the tax base in the center of the city levels off in relation to that in the rising suburbs, Cleveland's housekeeping problems—health, police, and welfare—show no corresponding reduction.

No one can say that we Clevelanders haven't had plenty of warning about how expensive slums can be for a city to go on tolerating. Back in 1934, Father Robert B. Navin, now Monsignor Navin, president of St. John College in Cleveland, completed a study of a 333-acre section of the city that included the present Longwood project site. Father Navin discovered that direct cost of maintaining the section—in city, county, and school services, in private and public health and welfare spending—was $2 million, against a potential real estate tax revenue of $225,000. He observed that the inclusion of a few items of administrative overhead would have made the deficit 10 times the tax return.

The social deficit, which also costs money, was found to be even more disproportionate. A section comprising 2.5 percent of the city's population and 0.73 percent of the land area boasted 21 percent of the murders, 8 percent of the juvenile delinquency, 26 percent of the vice resorts, 10 percent of the illegitimate births, and 12 percent of the tuberculosis deaths.

The years since Father Navin made his survey have increased the costs of municipal services without solving any of the social problems, so that even in a period of relatively full employment and prosperity, slum areas constitute a severe drain on the city's resources. When the city administration

went to Cleveland's voters with a $7-million urban-redevelopment bond issue in 1953, it could argue accurately that the Longwood section represented an annual loss of more than $200,000.

Some simple arithmetic shows how good an investment Longwood will be. It cost $3 million to buy and clear the project area. Resale of the land to builders brought $450,000, leaving a net cost of slightly over $2.5 million to the city and Federal Government. But the new apartments and shopping center will so enhance the tax returns from the section that the city will get its share of the costs back in 9 years. Hard figures like these as well as humanitarian motives convinced the business and industrial leaders of Cleveland that they should support the city's renewal efforts. This they are doing through the nationally recognized Cleveland Development Foundation.

Nearly 100 Cleveland companies subscribed $2 million to provide the foundation with a revolving fund to expedite almost every phase of Cleveland's redevelopment. Part of the money has been or is being used now as loans to the city and private builders to get specific projects underway. The list of officers and trustees of this organization includes many of Cleveland's industrial and commercial leaders. Mayor Anthony J. Celebrezze and Renewal Director James M. Lister have repeatedly paid tribute to the foundation's help in getting programs started.

THE NEGRO PROBLEM

Whenever I begin to feel complacent about what we are accomplishing for the Hurnses and families like them, I have only to climb into my car and drive up and down the broken streets of the neighborhoods adjoining the Longwood building sites. In half an hour, the proper—and bitter—perspective is restored. What we have done, what we are doing, is only a pinprick compared to the major surgery needed.

The majority of inhabitants of Cleveland's slum areas are Negroes. The Cleveland Community Relations Board issued a report a few years ago showing that only 500 of the 140,000 private dwelling units built in the Greater Cleveland area since the war had been available for rent or purchase by Negro families. What this has meant, of course, is that colored families, regardless of economic status, have been for the most part confined to the oldest and most rundown sections of the city. The Negro "problem," which helps create slums in the first place by overcrowding open neighborhoods, makes slum elimination all the more difficult.

Restrictive real-estate practices of builders, brokers, and lenders, echoing the sentiments of white neighbors, have made it almost impossible to obtain tracts of vacant land in the outlying sections of Cleveland or across municipal boundaries into the suburbs on which to build single home or apartment developments with open occupancy. Wider realization of the economic consequences of prejudice—the cost of maintaining slums, for instance—may help hasten the day when integrated housing is more than a church-sponsored social experiment.

Cleveland and other industrial cities should certainly review their extensive landholdings with an eye to making some vacant sites available for open housing. When the city of Cleveland was eager to attract the 1959 Pan-American Games it quickly produced land for a stadium, parking fields, and temporary housing facilities for the athletes. Why couldn't the same areas be made available for housing the slum DP's?

The need everywhere is for low-cost houses. The spectacular boom in the postwar years produced a tremendous amount of housing for families who could afford to pay $15,000 or more—families, in other words, with an annual income of $7,000 or more. It is safer and more profitable for a contractor to build and sell a $35,000 home than one selling for $8,000 or $10,000. But the supply of homes in the upper bracket has come within hailing distance of the demand. In fact, you can say now that the prospective buyer has a very good choice.

But the building boom didn't help the average industrial worker. Accurate figures for the income of Cleveland families show that 60 percent of the families are in the $3,600 to $5,000 per year range—too high for public housing under Ohio's income limitations, and too low for the private units that have been built.

This income group, which includes so many of the slum DP's, cannot afford to pay more than $65 to $95 a month in rent or monthly payments on a mortgage. Some of them, in desperation, are paying more than 1 week's take-home pay in rent, but in the long run they are bound to find they have been led up a blind alley. The old rule of thumb that no more than 20 to 25 percent of income should go for shelter still holds true.

In building apartments to rent or sell in the $65 to $95 range there are all sorts of problems, not the least of which is tight money. If mortgage-interest rates climb 1 percent, as they did between our first and second redevelopment projects, the purchaser's monthly payment jumps nearly $5—more than 8 percent—on an $8,500 mortgage. In addition, costs of material and labor keep increasing, and the average industrial worker's pay shows no sign of catching up.

One place where relief would seem entirely possible—and logical—is in land costs. Instead of charging $14,000 per acre for the Longwood site, why couldn't the city of Cleveland have deeded the land for $1, making sure that the savings would be passed on to the purchasers of the new units? It would have meant an immediate reduction in monthly payments of more than $3. As in the case of interest rates, the amount can be substantial for the family budgets we're talking about.

The increased writeoff on the land would help bridge the wide gap between public housing, which must be almost completely subsidized, and conventional private housing, which only those with incomes of $7,000 or more can afford. It's not as if the city would simply be giving away money it could never hope to see again; the time required for it to recover its capital outlay in tax returns would merely be slightly lengthened.

There's nothing radical about such a proposal. In many parts of the country, communities are providing free factory sites and sometimes even building free factories to promote industrial developments. The same philosophy of enlightened self-interest could well be applied to the housing crisis.

Slums are not only the shame of our cities in aesthetic and moral terms; they are also outrageously expensive.

Ninety-three percent of the shabby dwelling units in the razed slums of the Longwood section were owned by absentee landlords. When the Hurnses and the other families move into the new apartments, a large degree of homeownership will be restored to the neighborhood.

I feel very strongly that resident ownership is the best possible guaranty against community deterioration.

The Townsend Plan for National Insurance

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Congress a speech and statement by Dr. Francis E. Townsend, the founder of the Townsend Club movement and great champion for decent and adequate pensions for our elderly citizens.

Whatever one may think about the so-called Townsend Plan, there may be no doubt that Dr. Francis Townsend has been a constructive force in American economic life. He speaks out day after day for social justice for our elderly citizens. This statement is particularly timely as the Senate considers improvements in our social security system.

I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DR. FRANCIS E. TOWNSEND SPEAKS

I have just read an article in which the author expresses his belief that the findings of science will eventually bring about great revolutionary changes that will transform the world's social structure into a virtual heaven on earth.

I doubt very much that scientists acting alone can ever master the illnesses of the world. They can tell the world how to act, but they still have the apathy to overcome that afflicts the great masses of people who are ignorant and unable to think for themselves. These people, who need help most, cannot be reached with scientific advice. They are afflicted with a malady that is too deep-seated and too longstanding to be reached by scientific facts alone.

There is a worldwide sickness afflicting the human race today which is epidemic in character and which has been cursing the world since the dawn of civilization. Like all other men who have had medical training, I no sooner see a case of sickness that I do not want to make a diagnosis and, if possible, suggest the needed remedy. Having observed this world sickness, and having seen it in every part of the globe that I have visited, I have done a great deal of thinking about how to combat it and check its vicious spread throughout the world. This, I have concluded, can never be done through the discoveries of new medicines. I believe here is a case of such urgency and need that the world dare not wait for the slow and tedious experimentation that scientists require before curative agencies can be depended upon. This world sickness is spreading so rapidly, and its ravages upon humanity have become so terrifying, that nothing but the application of sound commonsense and immediate action will be able to slow it down.

Yes, you have guessed it; the malady I refer to is poverty. It would seem that a sickness so widespread would attract the at-

tention of the world's greatest thinkers, but it seems that familiarity with poverty creates an indifference toward it, and little or nothing has been done.

What a strange and fearful indictment is hurled at our cherished institutions, our schools, our churches, our colleges, and even our national Government itself, for their apathetic attitude toward this greatest curse that has ever afflicted the human race.

This indifferent attitude toward a rapidly-growing, worldwide affliction is carrying with it the threat of a revolution that is so dreadful that those of us who cherish our present social achievements are becoming truly alarmed they may all have to be thrown into the discard. This danger comes home to us when we stop to think of the magnitude of the impending disaster.

Probably two-thirds of the world's population can be classified as desperately poor. Until recently it has been accepted as an act of Providence that poverty was ordained as the lot of most mortals; only since the dawn of a spirit of democracy, growing out of oppression, has it been possible for mankind to break away from tradition and strike out for self-improvement in an independent way.

Here in the new world where men first found freedom to use their brains independently and increase their ability to produce new ways of creating wealth, the greatest revolution in all the world's history has been brought about. The tremendous discovery that there was no limit to our ability to create wealth has brought with it many new problems which clamor for solution. In these United States alone the problem of what to do with our new-found wealth is a problem of worldwide import.

Wealth that has been created but cannot be sold is almost as dangerous and baffling as poverty itself. Man's ingenuity and inventiveness have run ahead of the Nation's ability to buy and consume. At first glance it seems so simple a problem could easily be solved—just give away our excesses of such goods as we cannot use, through our home market. But we find there are markets abroad as well as here at home, and the people who run those markets object to our dumping our surpluses on them; it shuts down on their profits and disrupts their markets, and they say: "Keep your stuff at home; we cannot buy it and we will not have it dumped at our doorstep."

So here we are, we Americans, with a world of wealth-creating ability, doomed to restrict our production of wealth to the minimum and let factories and farms lie idle and unemployment increase and plague us.

Does it not seem strange that our national thinkers have not given consideration to the matter of increasing our home consuming ability by making us all better customers of our fast-growing volume of wealth?

In our national population there are at present some 20 millions of adult citizens who can be classed as paupers or semi-paupers. Their consuming ability is restricted to a bare livelihood because of one thing—lack of ability to buy. Their money supply has dried up.

Who are these people? The old, the sick, the crippled, the blind and all others who have met with afflictions that have incapacitated them for making a living. How foolish of us who are blessed with strength and good health to impose a burden upon ourselves by condemning these afflicted ones to a life of deprivation. It entails a tremendous cost upon the producers of our Nation to maintain 20 millions of human derelicts on a bare subsistence plane of living.

Why in the world do we not devise a way whereby these unproductive ones can be, come, at least, good customers? Customers are just as important to industry as working producers; all we would have to do to convert these burdened and burdensome people into useful citizens would be to see that they were liberally supplied with money; they would put that money to work purchasing great quantities of the wealth of things that are now surpluses.

If these deprived millions were to receive regular monthly annuities in sufficient amounts to permit them to live comfortably, and without anxiety and worry, they would soon establish a dependable flow of money throughout the channels of trade, and no such thing as a depression, or recession could become possible. Thus we could insure our Nation a constantly growing prosperity that would be proof against hard times.

Well, if we had for our Nation proof against hard times and depressions, that would constitute insurance for the free enterprise, capitalistic system of ours, would it not? And that brings us to the important theme of why we so badly need a national insurance system of money circulation that cannot be disrupted under any national or international conditions: If that kind of insurance can be made available to our Nation, it can shortly be made available to all others, when we make it clear to them how we have done it.

How to insure the nonexistence of poverty throughout the world is the most important and pressing problem facing the modern world; it is the biggest, most humane and benevolent undertaking that humanity can be called upon to undertake. It must be accomplished within the next few years or the possibility of its accomplishment will have been lost forever. A great revolution of the underprivileged people of the world is forming, and it is being fanned into flames by the advocates of communism.

Communist leaders are to be found in every country today preaching to the poor and helpless that their deliverance is at hand; that if they embrace communism their days of suffering will be over. The chronically poor are swallowing this doctrine through their ears; they are saying to themselves: "These promises sound good to us, even though they are only half true. Anything—any change, is better than what we have to endure now."

So, here in the United States, let us set up a system of insurance that will cover all American citizens and forever eliminate poverty from our country and demonstrate to other nations that we stand ready to help them do likewise.

A way of establishing and maintaining such an insurance has been before our Nation's lawmaking body for more than 20 years; unfortunately there are none so blind as those who will not see.

But extreme pressure is being put upon our lawmaking body from many directions. Our burden of poverty is growing very rapidly. It is causing a rapid increase of crime; it fosters ignorance and neglects disease; it creates a fertile field for the growth of that odious thing we call communism. All these enemies of progress and prosperity can be mastered here in the United States. We know there is no limit to our ability to create wealth. A just distribution of our wealth has become a must if we are to avert national and international disaster.

Let us not despair. There is great promise that in the very near future our legislative bill for the establishment of national insurance will win. Social forces all over the world are putting pressure upon our lawmakers, and the whole world is looking to the United States for a way out of its difficulties.

Let us remember that God helps those who help themselves. Let us all become individual missionaries for our country and for ourselves, and see that our neighbors are made acquainted with the importance of insuring that poverty shall no longer curse our Nation with its bitter blight.

Commendation of Senator Fulbright of Arkansas by Milwaukee Journal

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. PROXMIRE. Mr. President, I have in my hand an excellent editorial from one of the Nation's great newspapers, the Milwaukee Journal. It is a commendation of the Senator from Arkansas [Mr. FULBRIGHT] for the superb speech he made the other day. I wish to read merely the last paragraph:

Mostly, FULBRIGHT'S was an honest picture of where we are, and a cogent, fervent plea to Americans of both parties to break away from our present "inadequate, outmoded, and misdirected" foreign policy and try to develop "a set of coherent, realistic, well-thought-out objectives and feasible policies to attain them."

Mr. President, approval by the Milwaukee Journal is given only after the greatest consideration. It is a commendation which is something to be proud of. I congratulate the Senator from Arkansas on the commendation of this great newspaper.

I ask unanimous consent that the editorial may be printed in the Apendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS OUR FOREIGN POLICY?

One of the most searching comments on American foreign policy was made in the Senate the other day by FULBRIGHT, of Arkansas. It was grim, but so are the facts.

Senator FULBRIGHT said:

"Only the blindest of optimism would interpret our international position as a secure one. The fact is that we are in trouble, very deep trouble, regardless of what happens next in the Middle East.

"Time and again we have drifted until circumstances reached an intolerable state, and then we have rushed to the brink. This time we have even put one foot over the brink.

"This Nation has wallowed in a kind of fool's paradise in jolly and supercilious complacency while elsewhere others of more serious bent of mind have worked.

"Are we to admit that we are, as men, less capable, less astute than the Russians? If that is the case, we had better will the world to them without further ado—and ourselves along with it. But if we are their equals as men, and if the ideologies for which we bear witness are superior to theirs, then in heaven's name when are we going to stop taking refuge in this excuse that they are responsible for our difficulties?

"We have cast ourselves indiscriminately in the role of defender of the status quo. * * * We have found ourselves alined against those who would strike at tyranny or corruption. We have found ourselves alined with landlords who have exploited tillers of the soil and with militarists who have kept the people in line.

"We have on a grandiose scale provided peoples of the underdeveloped nations with the weapons of destructive warfare, and have been miserly in providing them weapons to wage war on their own poverty, economic ills, and internal weaknesses.

"What, really, is our policy in the Middle East? Can we live with Arab unity, or can we not? Where are we going in the Far East? What is our policy? We cannot forever ignore 600 million people on the mainland of China."

FULBRIGHT is second-ranking Democratic member of the Senate Foreign Affairs Committee. His statement was not overly partisan, although he did charge bitterly that "present leadership of this country, when it is not weak and desultory, tends to be impetuous and arbitrary." He blamed Congress for emphasizing military over economic aid. He traced Chinese policy back to the Truman administration.

Mostly, FULBRIGHT'S was an honest picture of where we are, and a cogent, fervent plea to Americans of both parties to break away from our present "inadequate, outmoded, and misdirected" foreign policy, and try to develop "a set of coherent, realistic, well-thought-out objectives and feasible policies to attain them."

Tribute to Admiral Rickover and Commander Anderson

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter from M. Leitzsey, published in the Washington Post and Times Herald of this morning.

The letter, Mr. President, has to do with Admiral Rickover, in connection with the development of the *Nautilus* and other submarines. The letter points out the great achievement of Comdr. William R. Anderson in taking the *Nautilus* under the polar icecap.

Mr. President, Commander Anderson is a native of Waverly, Tenn. We are very proud of Commander Anderson. A great celebration will be held in his hometown in the latter part of this month in recognition of what he has done. But the people of Tennessee are also very proud of Admiral Rickover. Admiral Rickover first worked on the motor which went into the *Nautilus* at Oak Ridge, Tenn. After that was developed, Commander Anderson was under Admiral Rickover's direction for more than a year.

I agree with the conclusion of the letter that Admiral Rickover certainly should have been included as one of the guests at the White House, and I am glad Commander Anderson, when he saw the slight which had been visited upon Admiral Rickover, immediately went to call upon the admiral to pay his respects.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ADMIRAL RICKOVER

It is altogether fitting and proper to accord every honor possible to the handsome and heroic Comdr. William R. Anderson, of the *Nautilus*, and certainly he deserves all the fanfare he so promptly received. However, it is difficult to comprehend the apparent neglect shown Admiral Rickover, the so-called father of the nuclear Navy, whose brilliant research and development—and pushing his project to completion—made possible Commander Anderson's wonderful achievement.

The commander immediately noticed and regretted the absence of Admiral Rickover and promptly hurried over to his office as soon as the ceremonies were over. The flimsy explanation that "there had not been room enough to crowd everyone in" was more than inadequate; it was ridiculous.

However, the little man who wasn't there was more than conspicuous by his absence, and instead of diminishing his fame, it will probably bring him greater recognition and appreciation by the whole world.

Surely the White House contains a room large enough to include one small, wiry admiral, although his brainpower couldn't be contained in a building larger than the Pentagon. He deserves the very highest accolade our country can bestow, and no doubt the first to agree would be Commander Anderson.

M. LEITZSEY.

WASHINGTON.

The U. N. Radiation Report

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. HUMPHREY. Mr. President, I call the attention of the Senate to an excellent editorial which appeared in the Wednesday, August 13, Minneapolis Tribune, entitled "The U. N. Radiation Report."

The concluding paragraph of the editorial supports the request that I made in the Senate on the date of Tuesday, August 12, when I urged that our Government make a basic policy decision on the question of banning further nuclear tests if proper safeguards and inspection can be agreed upon.

The editorial gets right to the heart of the issue.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE U. N. RADIATION REPORT

There's nothing fundamentally new in the U. N. report on radiation. It concurs in the widely held view that, genetically speaking, any radiation is bad radiation and is scrupulously scientific in noting that while fallout from weapons testing can cause leukemia and bone cancer, we don't yet have firm evidence as to how many cases of these diseases stem from testing and how many from natural causes.

It calls attention once more to the large amount of natural radiation (cosmic rays, etc.) which is harmful but which cannot be reduced and against which we have no present protection. And it notes that good radioactivity—i. e., medical X-rays—also has bad side effects.

The U. N. committee concludes that all steps designated to minimize the irradiation of human populations will act to the benefit of human health. Such steps include the avoidance of unnecessary exposure resulting from medical, industrial, and other procedures for peaceful uses on the one hand and the cessation of contamination of the environment by explosions of nuclear weapons on the other. The reference to nuclear explosions will almost certainly be cited by those who oppose weapons tests as support for their position.

Generally, the U. N. study repeats the findings of the excellent report made by this country's National Academy of Science in 1956. In that document, in the present U. N. report and in future studies, scientists can sum up their factual findings as to the effects of manmade and natural radioactivity. The decision that the manmade has exceeded or is about to exceed justifiable bounds must be a political decision.

That decision will not be made simply by saying that man's use of atomic energy—whether for weapons, medicine, or peaceful atomic power—has some bad effects and therefore must be immediately stopped. For almost every advance in human progress has been paid for with human suffering and even death. The western industrial revolution, for example, exacted such a toll in its time, and the human costs of contemporary industrialization in underdeveloped nations have only been reduced, not eliminated.

The value of reports like those of the U. N. and the National Academy is that they make it possible for the ultimate political decisions—such as to test or not to test—to be made on the most reliable factual information.

Broadcast by Fulton Lewis, Jr., on Middle East

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. SCHOEPPEL. Mr. President, on July 21, this year, there was a broadcast over the Mutual Broadcasting network by Fulton Lewis, Jr., that is so apropos with reference to events of the past few weeks, and, for that matter, the last few days, that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

BROADCAST BY FULTON LEWIS, JR., JULY 21, 1958

The Middle East spotlight is beginning to switch to the United Nations, tonight, as the actual happening of events at the scene of the crisis begins to quiet down. There have been a few minor skirmishes between loyal Lebanese troops and rebels in Beirut, but none involving Marines, and some 92 Americans who were caught in Baghdad by the overthrow of the government of King Faisal 1 week ago this morning were flown out of the country to Ankara, Turkey, in a Pan American Airways DC-6-B which the State Department chartered for that express purpose.

Despite the fact that they were all instructed not to talk with newsmen or anyone else except State Department personnel, several are reported to have done so, and they said that everything is quiet in Baghdad and they didn't know anything had happened till they got aboard the plane.

That coincides, generally, with scattered pickups from other escaping travelers to other points, one of whom said that among the group of individuals massacred by tommy-gun fire along with the King, the Crown Prince, and the Premier in the palace courtyard were three foreign show girls,

who were staying in the palace. How they happened to be there was not explained, but this was a rather expensive weekend in Baghdad. One was Canadian, one was French, and one was Israeli.

Troop movements in the area have pretty much stopped. The United States and Britain both seem to have moved in all the forces they consider necessary to do the job, and the entire picture seems to be poised to await whatever the next events are that may take place, if any.

To the diplomatic analyst, probably the most significant event over the weekend was the release by the East German Government of the nine Army helicopter prisoners, who have been held for weeks in Dresden, after being captured by the Russians, when their plane ran out of gas and had to land in a thunderstorm in East German territory.

It seems to be generally agreed that this release was the dirct result of the American-British move-in of Armed Forces into the Lebanon-Jordan area, and that it betrays a massive apprehension on the part of the Soviets.

For weeks, Moscow has been toying with that issue—the nine helicopter prisoners—amusing itself with a cryptic game of tease, so far as we are concerned, cooperating with the East German Government—if such it could be called—in a pitch to win de facto recognition for that government, as the cost of freedom for the prisoners.

It's an old Russian trick, and it seems to amuse the Kremlin leaders to needle Western powers in such situations, like a cat toying with a mouse.

But came this break in the Middle East, the Moscow bosses decided the picture was too serious to be taking time out to play, and that this might have been one of the things that had been played too far, and had triggered action on the part of the United States and Britain—and decided to forget it and turn the men back. Those who know the Russian ways say unquestionably they intended to do so all along, sooner or later, but were enjoying the pantomime as long as it seemed harmless.

That coupled with a generally bewildered reaction from Moscow so far as diplomatic moves are concerned, suggest that the Soviet leaders never expected the move-in that suddenly took place, and are floundering around trying to figure out what to do about it.

The one thing they have come up with—the demand for an immediate summit conference to discuss the crisis in the Middle East—is not doing very well, thus far. They wanted the conference to begin tomorrow morning, and the White House announced late this afternoon that the President will not even have an answer for the note until tomorrow at the earliest, and perhaps not then.

A tentative draft of it was turned over to the British and the French for study today, but nobody seems to be very thyroidal about getting it decided and delivered and the general picture is that we are letting Mr. Khrushchev cool his heels in the outer office while we take our time.

This is a beautiful picture for study, incidentally, because it is a very dramatic setting of the international chess board.

Mr. Khrushchev, alcoholic that he is, has baited and badgered and ridiculed and challenged like the bully from the gashouse gang, and the longer the decent law-abiding citizens of the neighborhood put up with it, the more he began to believe his own propaganda about how strong and tough he is, and how big his gang is.

But finally, out of a clear sky when he is just in the middle of one of his housebreakings, the lights go on and he is surrounded by the cops—it all catches up with him at once, and when he begins to take stock of his real situation, he begins to realize that that huge gang of his consists of victims he and his top pals have bullied into submission, and then comes the showdown, they not only will not come to his rescue and support; they would like nothing better than to see him clobbered and thrashed within an inch of his life. It was all a lot of fun, the boasting and the bragging and the stealing and the waylaying of smaller boys, as long as he was enjoying the immunity that was extended to him because of the code of the society on which he was preying. They believe in orderly procedures of accepted law and human behavior, and they declined therefore, to resort to the methods that he was using against them.

But now, all that's over. The camel's back is broken, and they're on the same level with him, and the situation is bad, bad, bad. And that is the picture that Mr. Khrushchev finds in the magic mirror of the Kremlin tonight, make no mistake about it.

Put yourself in his shoes. His only reliable allies are two: Mr. Nasser down in Cairo, who hasn't got a thing when it comes to force; as weak as a newborn kitten, and wouldn't last 36 hours, if the British and Americans—even leaving out the Israelis—were to turn on him. And military experts agree that the Israelis could do it by themselves, and would like nothing better, and it wouldn't take them more than 36 hours. That's ally No. 1.

Ally No. 2 is Communist China, with two sabre-toothed tigers just waiting for the opportunity to pounce, from Formosa on the one side and from South Korean on the other. And while Mao Tse Tung has lots of men, and men who hold life very cheaply, they aren't any good in modern warfare, unless they have the materials with which to fight, and if Mr. Khrushchev is threatened from other quarters, he cannot afford to be sending any considerable quantity of his war materials to Mao Tse Tung.

And all this while, on his southwest front, is a snarling, murderous pack of caged wolves, who for 13 bitter years have been suppressed under his dictatorship and who have demonstrated their determination to be free of him, even when they had nothing to fight with. What happens when they are unleased, and supplied with arms and air support and all that goes with it?

They almost succeeded in Hungary, as Mr. Khrushchev well remembers, and likewise in Poland, and we, the stupid Western world, following the milktoast counsels of the diplomats sold them short on those former occasions and gave them not the first iota of help.

That would not be so this next time. Come another outbreak, we would give them supplies and guns and tanks and the protection of our combined air forces, and this would be bad in the extreme.

Mr. Khrushchev just cannot spread it that thin. He is extended, and, through half the distance of his lines, he is operating through enemy country which hates him and everything he stands for, and that is tough operating.

Oh, it has been all very easy to put up this great front about the family of the proletariat nations and the glorious people's republics of East Germany and Poland and Bulgaria and Rumania and Czechoslovakia and the rest. While the tanks were in the background and his Russian soldiers were standing around the periphery of the crowds, he could make those statements and nobody would challenge them, because nobody dared. It was suicide to do so.

But Mr. Khrushchev and his predecessor, Mr. Stalin, weren't fooling anybody with that line—unless it was themselves. Feeding it to the Russians is one thing. They have never known anything but dictatorship and degradation, and they are in their homelands, at least, and the Russian troops that are everywhere present are their troops.

That is not so in Poland and Hungary and the rest of these subjugated countries. In the first place, they are a people who have a culture of their own, in each case; they are a people who have known freedom and are willing to fight for it again when the opportunity arises. They are being occupied by a foreign conqueror, and the talk about the people's republics is so much hogwash. Gomulka? Kadar? Gottwald? These are self-serving pigs, the puppets of a hated foreign government, as much hated and despised as were the huns of old.

This is what Mr. Khrushchev sees in the mirror tonight, and it is an ominous picture, indeed. He dares not move, this way or that, for fear the slightest misstep will trigger his destruction.

He turns now to the United Nations—the very United Nations he has violated and defied and kicked in the teeth and helped to render impotent—and hopes that somehow there will be some solution in that direction.

He wants a summit conference—which he will not get, not on his terms. He wants to discuss the Middle East. There will be no summit conference, I am able to inform you at this moment, unless everything is discussed, as part of the whole evil picture—and it will be held, even then, only as a very last resort.

Unhappy man—and let the world gloat over that fact. He has had it coming a long time.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. PROXMIRE. Mr. President, the Nation has, I think, only one reasonably large daily newspaper which is a personal, crusading newspaper, and it is the Capital Times of my own home city of Madison, Wis. In the great tradition of American journalism, it is a militant campaigner for liberal democracy in every sense of the word. There has recently been published a typical liberal editorial, which I ask unanimous consent be printed in the Appendix of the RECORD, entitled, "If Federal Aid is O. K. for Business, Why not Business?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF FEDERAL AID IS O. K. FOR BUSINESS, WHY NOT EDUCATION?

The Wisconsin Statee Chamber of Commerce continues to drone away on the dreary theme that Federal aid to education will mean Federal control of education.

Actually, as Philleo Nash, candidate for the Democratic nomination for lieutenant governor, recently reminded us "Federal aid to education is older than the Constitution of the United States."

Nash pointed out that 2 years before the adoption of the Constitution the Continental Congress, at the instigation of Thomas Jefferson, wrote an ordinance for the government of the Northwest Territory providing for free public education and setting aside from the public domain sufficient land to provide free schools.

Federal aid is an old and honorable principle, which has been continued in various forms through the years. Many of our colleges have made permanent improvements

from the funds received under the GI bill of rights.

It has always seemed strange to us, as it must to many overburdened property taxpayers who are shouldering the increasing costs of education, that such groups as the chamber of commerce continue to discriminate against education and agriculture. They have no compunctions about accepting Federal aid to highways. Indeed, they are among the most passionate lobbyists for more Federal highway funds.

Is the cement that goes into a highway any more tainted than that which goes into a school?

Nor do we hear them object to Federal aid to the shipping lines, the airlines, the newspapers and all the other private businesses that are subsidized with Federal money. Why aren't they concerned about Federal control of these recipients of Federal aid?

Why is it that only Federal aid to education and Federal aid to agriculture alarm these business groups?

Centennial of the Conflict of 1861–65

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, August 16, 1958

Mr. YARBOROUGH. Mr. President, the approach of the centennial of the War Between the States quickens interest in the type of observance which is planned. An editorial published in one of the great newspapers of the South and Southwest very ably discusses the trend of the planning to this date. There is great interest in my home State of Texas in the type of observance to be held in the years of the commemoration of the event.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Nation Will Conduct Centennial Observance of 1861–65 Conflict," published in the Houston Post of July 28, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATION WILL CONDUCT CENTENNIAL OBSERVANCE OF 1861–65 CONFLICT

America is preparing to conduct its most lavish historical observance. The years 1961–65 will mark the 100th anniversary of the great Civil War by which this country was torn asunder and then welded back together more strongly than ever before.

The national observance will be headed by a distinguished American, Maj. Gen. Ulysses S. Grant III, grandson of the man who took Richmond. And it is worthy of note that when it came time to select the chairman of the Civil War Centennial Commission, an agency created by Congress, a Virginian nominated General Grant and there was unanimous approval, both North and South.

General Grant has called on all States, regardless of their status during those fateful years, to form State commissions to cooperate in the planning and coordination of the forthcoming centennial observance. General Grant said the objective of the commission is to make it the greatest pageant in our history. He added that the participation of all States, whether at the time they were States, Territories, or embraced in the borders of another State, is wanted.

On most of the major battlefields of the Civil War, such as Gettysburg in Pennsylvania and Vicksburg in Mississippi, there are markers and monuments erected by the people of both North and South in honor of their sons who fought there. The Lincoln Memorial in Washington, probably our most beautiful national monument, is encircled by the names of all of the States. In short, the war is over and very few scars remain. The war's centennial observance is something in which all States can take part with pride.

A major objective of the observance is the collection and safe storage of letters, diaries, journals, and other documents of historic value concerning the war. People will be asked to go through old trunks and storage closets to search for such material.

Texas, a member State of the Confederacy, contributed much to the South's cause. On the battlefield of Gettysburg, for instance, there are markers which tell the story of the heroism of Hood's Texas Brigade. Visitors to Gettysburg find it difficult to understand how they had the courage to race down a steep hill to the bottom of a ravine and up on the other side, constantly under Yankee fire, to drive the Union force out of a natural fort, called, appropriately enough, Devil's Dam. But they did.

Texans fought valiantly in other battles and the war came to the State in the battles of Galveston and Sabine Pass. Indeed, there is abundant reason for Texas participation in the observance.

American Foreign Policy in the African Area

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, August 16, 1958

Mr. HUMPHREY. Mr. President, recently the Governor of Michigan, the Honorable G. Mennen Williams, traveled into parts of Africa, particularly Liberia and Ghana. He has conveyed some of his impressions to the Secretary of State, a copy of which letter he has shared with me.

He also has prepared a statement on United States policy in Africa which was issued upon his return.

I ask unanimous consent that these two documents be printed in the Appendix of the RECORD. They represent an important contribution to the development of American foreign policy in the African area.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

AUGUST 5, 1958.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: Permit me to express my appreciation for the many courtesies extended to me by yourself and by the members of your department at home and abroad in connection with my recent trip to Liberia and Ghana. In everything and on every occasion, the department served me and my purposes well.

Specifically, let me say that in Liberia I met Richard Jones and his wife. He is a most genial person and is working hard to fulfill his duties. While I had a very full schedule prepared by the Liberians, Mr. Jones had a reception for me and performed other incidental services for me. He also met me and saw me off and paid other kind attentions and courtesies which I much appreciated.

In Ghana I was met by Ambassador Flake, who impressed me very favorably as an experienced career official who was doing an effective job. He was particularly ably assisted by Peter Rutter, who with his wife not only performed services for us beyond the call of duty, but who, I had the feeling, had a good grasp of African affairs. The Ambassador in his summing up for me made some very interesting points, some of which I found difficult to believe, but which on independent review I found to be absolutely correct. In connection with esome passport and travel, the Embassy moved mountains and I commend them most highly on their efficacy.

Mr. Secretary, I do not pretend to be a foreign affairs expert, certainly not an expert on Africa, but as you may know, I have an interest in the field and have studied and traveled somewhat.

My own official business in the oncoming campaign make it impossible for me to spend much time in putting together the kind of report I would like to prepare for you. Therefore, not to wait until the time when I could do it properly, I would like to substitute as an addendum hereto a press release I issued on my return to the United States.

In addition to this I would like to say that I did hear several businessmen and government officials say that the Soviet operations are perhaps more vigorous than my press release indicated. This leaves me to believe that action on our part is imperative at this time.

It was impossible for me to accurately gage the importance or prestige of the Pan African racist extremists. However, I strongly suspect there is more of this than some of our good friends let on. The very convincing and esudite Ghana Minister of Education, Mr. C. T. Nylander, made an independence day speech which showed influences, which may have been only political license or which may have had deeper significance. While it sounds strange for me to say this to you, in describing the push for African independence, he stated that the African lamb was fiercer than its opposition and that the African elephant never forgets. There were other occasions when this kind of language came out. Again, I can't say that I could give you a sound judgment in this area except to say that I think much and careful consideration should be given to this kind of thing.

Finally, it seems to me that real thought should be given, if it is not being given, to the idea of where America should stand with respect to Pan Africanism. It may well be to our interest to prevent the volcanization of Africa, where the Soviet Union might sow confusion and discord.

Again, Mr. Secretary, I wish to thank you for your many kindnesses and apologize for the incomplete kind of report this is, but I trust you will understand the circumstances.

With every good wish.

Sincerely,

G. MENNEN WILLIAMS,
Governor.

STATEMENT ON UNITED STATES POLICY IN AFRICA, BY GOV. G. MENNEN WILLIAMS, OF MICHIGAN

Governor Williams, arriving at Idlewild Airport, N. Y., made the following statement based on a 10-day trip to Liberia and Ghana, independent countries of Africa. Primary purpose of the governor's trip was to attend ceremonies marking the 111th anniversary of Liberian independence, at which he was guest of honor.

Governor Williams said he found both countries very friendly to the United States and making democratic progress.

"But," he continued, "you don't have to be an African expert, which I am not, to see that things are getting ready to pop in Africa and that the United States has neither a workable comprehensive all-African policy nor a particularly effective policy for Liberia and Ghana.

"The proposed action for Ghana resulting from Nkrumah's visit is a step in the right direction, but this is only a very feeble beginning. Now is the time to act, when the iron is hot and malleable and before it either melts and spills over who knows where or becomes cold and rigid. Now is the time to act, when our friendly relations are at their best, and when our action will be most helpful and appreciated.

"With regard to Liberia, it is to the self-interest of the United States to vigorously support and help develop this friendly country. Africa is more than restless with the desire for self-rule. But this legitimate ambition can be distorted into ugly results by overexuberance, or by rampant Nasserism and/or latent Communist subversion. President Tubman, of Liberia, in this maelstrom has consistently supported the free West, and as senior statesman of the independent African states, particularly those south of the Sahara, he has provided progressive and sensible leadership in the direction of free self-determination and world cooperation.

"Furthermore, whether the United States likes it or not, it is a fact that Liberia is regarded as a showcase of American democracy in Africa, and we're not showing at our best. The Communists are pointing to the lag in Liberia with its close association with the United States in comparison with some of its neighbors who were or are European colonies in an effort to discredit both the United States and our free way of life. This certainly is an added reason why the United States should support the development and growth of Liberia."

By way of explaining the last statement, the Governor pointed out that all Africa knows that the United States sent our freed slaves to Liberia, beginning in 1820, encouraged her independence in 1847, kept other nations from exploiting her, used her as a staging base for American planes in World War II, and now has important business interests there. Liberia adopted a constitution and system of government based on our own, and is generally regarded as following the American line.

While colonial powers were developing Africa for their own profit and collaterally providing some education and economic advantages for a number of African people, the United States more or less left Liberia to shift for itself. Without capital and other resources, the Liberians skillfully maintained and developed their liberties, but were unable until comparatively recently to exploit their economic resources or to bring education to the native peoples. The result of this was that in some ways Liberia lags behind the economic and educational development of some of her neighbors.

The Governor then continued: "Liberia with some support from the United States Government and with the help of American business enterprise is hard at work trying to pull itself up by its own bootstraps. It has made commendable strides in establishing a system of education not only for its civilized population but also for the indigenous people, some of whom are almost ready to live in a modern society but some are not. Liberia has built some roads, experimented with improved agriculture, encouraged business enterprise, and has built up a cultured and intelligent leadership that is able but too few.

"Incidentally, there are many attractive opportunities for American businessmen in Liberia. Liberia welcomes free enterprise, pursues an open-door policy, gives new business tax concessions, and permits the free export of profits from the country. The country is rapidly developing not only its tree crops but such minerals as iron, gold, and diamonds.

"President Tubman has said time and again that Liberia seeks no gifts, and Liberia has sought to pay its loans. Liberia urgently needs loans for internal development such as roads, power, and communications. Presently, the United States has a $23 million loan under consideration. I recommend that it be authorized in full.

"Liberia also needs technical assistance. The United States is doing some good work in this area but it requires considerable expansion. For example, the Booker T. Washington Institute is doing a magnificent job in practical vocational education. But there should be three such institutions at least.

"In some places American assistance is not appreciated. That certainly will not be the case in Liberia. Liberia regards the United States, some will be surprised to know, as her mother country. President Tubman has unabashedly taken our side time and again in international matters. It is important that this be generously recognized, because it has been suggested to him that Liberia would do better by sitting on the fence between the East and West. It certainly would not be in the best interests of the United States to create the illusion that we are more concerned with buying the allegiance of waverers than in helping our friends and allies."

The Cherry Growers' Amendment

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. NEUBERGER. Mr. President, an editorial from the Oregonian of August 13, 1958, has taken a stand in favor of the position which I assumed in the Senate in opposition to the so-called cherry growers' amendment, that would have weakened the Trade Agreements Act.

The editorial, entitled "Victory for Broad View," shares my belief that the Senate-House conferees acted wisely in dropping this amendment, which was neither necessary for the welfare of the cherry growers nor beneficial to a successful trade program with our allies overseas.

I ask unanimous consent that the editorial from the Oregonian of Portland be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY FOR BROAD VIEW

The reciprocal trade bill, which was passed by the Senate Monday and which now goes to the President for his signature, does not contain the so-called cherry growers' amendment which Senator WAYNE L. MORSE, of Oregon, put into the Senate bill as originally passed. The amendment was dropped from the final bill last week by the Senate-House conferees.

Deletion of the amendment was a victory both for the Eisenhower Administration and Senator RICHARD L. NEUBERGER, of Oregon. Senator NEUBERGER not only opposed his fellow Democratic Senator from this State, but all other Pacific Northwest Senators, in his stand against the amendment. He expressed the view that he could not, in good conscience, oppose similar demands to weaken the act from other States if he succumbed to local pressure from his own State.

The amendment was designed to include cherry growers among those who may appeal to the Tariff Commission against imports of glace and candied cherries. But the amendment had to be wider than that. So the domestic industry producing like or directly competitive products which may appeal to the Commission was redefined to include any group of producers of raw or processed agricultural or horticultural products from which any import-affected products or articles are produced.

A memorandum from the Department of Commerce said the amendment would substantially widen the area of domestic operations which might be considered threatened with serious injury by any imported article. Cotton growers could claim injury if imports of men's shirts increased, or, to take an extreme case, cattle raisers might claim to be affected by imports of gloves.

Commerce Department spokesmen also pointed out that growers' cooperatives produce a large part of the United States output of brined cherries and thus they already are entitled to bring action under the escape clause in regard to imports of such cherries. To the extent that cooperatives produce glace cherries, the growers also have the right of appeal on imports of that nature.

Therefore, there was no need for the amendment in order to give Pacific Northwest cherry growers standing as applicants for escape action. On the other hand, adoption of the amendment would have opened a wide area for action to weaken the vital reciprocal trade agreements between the United States and other countries. In standing with the administration against the amendment, Senator NEUBERGER took the broad view of foreign trade which is essential to its success.

Haven't They Heard of Hoffa?

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from this afternoon's Washington Daily News.

I agree completely that the revelations of the McClellan committee over the past months, and particularly within recent weeks, are more than sufficient argument for affirmative action by the House on the labor reform bill passed by this body recently. That bill, I understand, will come up for a vote in the other body next Monday and I know that the Members of the House will have in the forefront of their minds the effect which enactment of this bill will have on a cleanup of labor rackets.

If this law were on the books today, it would be impossible for the Hoffa-dominated teamsters union to have criminals as officers. It would be impossible for the funds of the union to be drawn off for the personal profit of a few officers without the knowledge of the union members.

These and many other aberrations in a few unions would be cleared up promptly by enactment of S. 3974 by the Congress this year, and I can see no reasonable justification for not supporting this measure under present circumstances.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAVEN'T THEY HEARD OF HOFFA?

Congress has been acting like it never heard of Jimmy Hoffa—even though the Senate's McClellan committee for 18 months has been spreading on the record a massive volume of evidence showing Hoffa is a consort of criminals.

All the other evidence poured into the McClellan committee records—misuse of Teamster Union funds, sellouts to employers, hooliganism—has failed to arouse indignation in Congress.

Only now, at the tag end of the session, have House leaders been able to bring up the Kennedy-Ives bill, a gingerly approach toward a law to curb the likes of Hoffa. An effort will be made Monday to get this measure a House vote. But a stronger bill, although backed by the Eisenhower administration, has no chance at all.

Even a bill to clean up union pension and welfare funds—which ought to be sacred in anybody's book—has been diluted to the point of futility.

You would think laws to combat the abuses, arrogance, and outright thievery of union-raiding racketeers would be the easiest thing in the world to get through Congress—out of pure decency if no other reason. The laws which have been proposed, however feebly written, are aimed at protecting the rights and dues of the workers who made up the unions.

When Hoffa was hauled up before the McClellan committee last year he promised to do something about the hoodlums in the Teamster Union. When he was hauled back the other day he testified he had asked all the boys and they all said they were pure. So:

"What more could I do?"

That one line ought to be enough to goad every Member of Congress into a furious effort to get the stiffest kind of law to protect the victims of these racketeers posing as union leaders. What are they afraid of?

Impartial and Nonpunitive Legislation Is Always in the Best National Interest

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. DONOHUE. Mr. Speaker, I have been privileged to sit in this, and other legislative assemblies, long enough to know that there will never be any such thing as a perfect bill composed by human minds, without divine assistance. May I further say that within my experience I have never seen a measure of purely punitive intent accomplish any real or lasting good.

In the enactment of legislation under our democratic processes we have come to expect the efforts of special groups to interject their passions, prejudices and particular interests. As conscientious legislators it is our duty to closely examine these pressures and concentrate our attention upon the enactment of a reasonable compromise designed primarily to inspire observance of the law with good will because of its essentially impartial nature.

In this respect there is pending before us a so-called labor-management reform bill which was approved in the Senate by an overwhelming bipartisan vote of 88 to 1. No one with good sense claims that this measure is perfect but, even according to a great many members of the Industrial Relations Research Association, it unquestionably, if adopted, would contribute to union reform and sound industrial relations. However many contentious provisions the measure may be said to contain, it undoubtedly occupies a middle and compromise ground between the extreme demands of employer and union groups. Its enactment would tend to restrain a great many of the worst abuses plaguing some of the country's largest unions and it would provide more control by union members over the affairs of their organizations. Certainly it would discourage the unbridled ambitions of those few unscrupulous individuals whose main objective appears to be personal use of big union trust funds for their own interest.

There are also provisions in this bill placing additional restrictions upon unwarranted management practices; provisions designed to prevent scheming employers from entering into collusive arrangement with any tempted union official for the purpose of perverting real collective bargaining.

The revelations of the McClellan committee have demonstrated the need for reasonable legislation to encourage labor-management, internal activity reform. The general public expects a responsive impartial reaction of the Congress to that need. The great majority of labor unions have taken the first and biggest step in the best method of correction, from within, by their adoption of strict ethical codes of practice. With a temperate measure of impartial and reasonable, which is always the wisest, legislative encouragement we can entertain good hope for increasing good will and cooperation between labor and management for the national benefit. In pursuit of that wholesome objective, I most earnestly hope that this labor-management reform bill will be presented to the House before adjournment, so that it may be discussed, debated, and acted upon in accord with our democratic legislative traditions.

George Todt's Opinion on Senator William F. Knowland

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD articles entitled, "George Todt's Opinion," published by the Valley Times of North Hollywood, Calif., on various dates.

These are particularly good articles and very complimentary to our distinguished minority leader, Senator WILLIAM KNOWLAND.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION—KNOWLAND'S SOUND PHILOSOPHIES

("Ideas must work through the brains and the arms of good and brave men, or they are no better than dreams"—EMERSON.)

It is always hard to write a column when Senator WILLIAM F. KNOWLAND speaks to the American people nowadays. For the simple reason that he says so many good things that one must be perplexed as to what to emphasize and what to leave out. The trouble is that it is all so solid and worthwhile. Certainly his hard-hitting and dynamic address at the Hollywood Palladium last Monday night, when he was the principal speaker for the United Republican Finance Committee dinner, was no exception. Here are some highlights:

"We must, as a nation and a political party, build on principles rather than personalities. Individuals come and go, but fundamental principles endure. What are some of these basic principles our party should stand for? I suggest the following:

"1. Constitutional government with the division of power between the legislative, executive, and judicial branches of the Federal Government and the reservation of all power not granted to the Federal Government, under the Constitution, to the States and to the people. The longer I have been in politics, the stronger I have leaned as an advocate of States rights.

"2. Maintenance of our free enterprise system under which we have grown from a small colony of 3 million people to a great world power of 170 million with the most productive economic system the world has ever known.

"3. Protection by the Federal Government and the States of the people from the concentrated and arbitrary use of power by business or labor organizations against individuals and small-business enterprises. The right to earn a living is a civil right of the first magnitude.

"4. Maintenance of a sound and growing economy based on free enterprise and full employment. No business or labor organization should have the power to strangle the economic life of 170 million Americans, and by so doing endanger freemen everywhere.

"5. Support a sound fiscal structure for our Federal, State, and local governments. This requires all of them to live within their means and to stop trespassing on the tax resources of the others. Without a sound dollar and a solvent government our whole structure of local, State, and national governments, of public and private educational facilities, of wage earners, of public social security and private pensions and retirement systems will be jeopardized. Without a sound dollar every employee, every housewife, and our people living on retirement income or social security payments will be penalized. Inflation and debt repudiation is another form of confiscatory taxation in the Marxist Socialist pattern.

"It is time for us to rededicate ourselves to a renewed faith in our free way of life."

Those who may glorify the social welfare state philosophy of government might feel that Senator KNOWLAND is desirous of taking us back to 1890 with his principles thus enunciated. The rest of us who prefer commonsense instead of the more lofty reaches of the stratosphere will welcome his timely suggestions for the future—and this includes both the sensible segment of the Republican

Party as well as their counterparts who are to be found among moderate Democrats.

GEORGE TODT'S OPINION—KNOWLAND'S LABOR BILL OF RIGHTS

("If principle is good for anything, it is worth living up to."—Benjamin Franklin.)

It now becomes increasingly clear that what Senator WILLIAM F. KNOWLAND, the Republican party's man of principle, is actually doing with reference to organized labor is simply this: he is ignoring the haughty, entrenched union bosses and going over their heads to the rank and file union membership with what might well be called a labor Bill of Rights.

He will not be applauded by the Hoffas, Becks, Reuthers, Dios, and other dictatorial bosses of that ilk—on National, State or local levels. But he will become increasingly the champion of Union Joe Doakes as he learns what the Senator is talking about. What Mr. KNOWLAND is seeking to end, no less, is the brutal victimization of Union Joe by certain labor tyrants who have ridden roughshod over him in the past.

I listened to the Senator in his tremendous address before the California Republican assembly in Long Beach last Saturday—and he dealt in specifics. He was never more serious or in greater earnestness than when he demanded seven items in behalf of dues-paying members:

1. The right of the membership to select their officers by secret ballot.

2. The right to recall incompetent or dishonest officials by secret ballot.

3. The right to vote by secret ballot on the question of taking the membership out on strikes.

4. The right of the membership to be protected in the administration of their welfare funds in the same manner as are insurance policyholders or bank depositors.

5. The right of union members to have their dues and initiation fees handled with integrity and strict accountability.

6. The right of the union membership to correct arbitrary and unlawful action of union officials.

7. The right of union members to be protected from reprisals and job discrimination in cases where they challenge union leadership.

Here, then, is the labor bill of rights which Senator KNOWLAND has proposed for Union Joe Doakes.

More items may be added later at the suggestion of union members themselves.

Who can say that anything Mr. KNOWLAND has proposed is against the best interests of organized labor? Labor, it says here—not the selfish overlords of the rank and file of union membership whose personal greed sometimes seems to beggar description.

The greatest wonder of all this—from the moral point of view—is why it hasn't been enacted in terms of appropriate legislation before.

Are labor-union members second-class citizens?

Aren't they entitled to the same protection as other investors in tangible and intangible matters of monetary consideration and value?

Who has the effrontery to negate the basic and fundamental rights any American citizen may be expected to possess—whether that organization be a labor union or any other relationship based on trust?

Senator KNOWLAND with his customary integrity and forthrightness is not only asking such needed questions in behalf of the American people—but he is also proposing a positive remedy.

GEORGE TODT'S OPINION

("See! There is Jackson standing like a stone wall."—Bernard Bee—Battle of Manassas.)

It must seem well-nigh incredible to any thoughtful American that practically all unions in the State of California have either raised their dues substantially or levied special assessments or right-to-work funds from their members in order to battle against a man who has stood up to be counted for working men and women today as has Senator WILLIAM F. KNOWLAND.

Let me tell you what they are fighting against—the reason why they are taking the workers' money to do battle with the champion of Joe Doakes. The authoritarian labor bosses, entrenched in wealth and spoils obtained through compulsion in all too many cases, hate the libertarian labor stand of BILL KNOWLAND. They are forcing their wards to contribute money to destroy his his stand. What is it?

Here is Senator KNOWLAND'S labor policy in full. This is what union men and women are being compelled to contribute money for—the defeat of the very stand which they want and desire themselves.

"I stand for free and democratic unions," state Senator KNOWLAND. "I believe in and unqualifiedly support the right of every American worker to join a union. Any attempt to restrict the opportunity of an employee to participate voluntarily in a union, or to prevent a duly elected union organization from representing such employees in collective bargaining, will be vigorously opposed by me.

"I believe in the right of every union member to have a free voice in the administration and activities of his or her union, and if the union does not act in their best interests I believe in the right to withdraw from the union without losing employment.

"I have introduced legislation in the Senate, and support similar legislation in California, which will guarantee democratic control by union members over the officers and activities of their respective unions. This legislation does the following:

"1. Guarantees the election of union officials by secret ballot.

"2. Provides for the recall of union officials who misuse their positions of trust and responsibility.

"3. Prevents conspiracies between management and union officials that work against the welfare of union members.

"4. Protects union members' welfare and pension programs.

"5. Requires that where unions are permitted, under law, to represent all employees in an industry or plant, all employees must be admitted into the union if they should desire union membership.

"6. Provides that union members shall have a voice in the conditions, terms, and duration of a strike.

"7. Prevents arbitrary control over local unions of trustees appointed by national or international unions.

"8. Provides for regulation by union members of the actions of their unions on questions of excessive union fees, assessments or arbitrary actions.

"I believe that unions, in order to grow, prosper, and function effectively, must induce employees to become members of their organizations voluntarily and not by compulsion.

"No permanent progress has been achieved in our society, or in any other civilized nation, where people are compelled to belong to particular organizations in order to exist. The strength and contribution of our churches, parent-teacher associations, and fraternal, charitable and civic organizations has been due to the free and willing participation of our citizens.

"I believe in the right of an individual to decide, without coercion, his intention to become a member of a union. I also believe that if an individual decides not to support a responsible union which is working for his benefit, that union would continue to advance without his membership.

"In voluntary organizations, there will always be some individuals who will not participate in the activities of institutions working in their behalf. But that is the price we must willingly pay for liberty. Its alternative is compulsion without cooperation.

I therefore support the initiative proposal which will permit the people of California to vote on voluntary versus compulsory unionism.

"I believe it is necessary to raise the issue of undemocratic and compulsory unionism at this time in our Nation's history. This is not a partisan issue.

"If we are to continue to make progress through our free enterprise system, with its benefits flowing to all, responsible management and responsible unions are necessary to achieve this objective. We are all, in a real sense, each one our brother's keeper.

"I have great faith in the ability of the citizens of California to independently see the difference between truth and falsehood. I am convinced that the recommendations and policies that I propose will be supported by the members of organized unions when they are fully and fairly informed.

"Freedom and democracy must prevail in organized labor, for responsible union organizations operate in the best interests of our society."

AFL–CIO Opposition to Equal Rights

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Miss Alma Lutz, which was published in the July 13, 1958, issue of the Boston Sunday Herald, Boston, Mass.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HITS AFL–CIO OPPOSITION TO EQUAL RIGHTS

To the EDITOR OF THE HERALD:

Who sets the standard for American women? National women's organizations, such as the National Federation of Business and Professional Women, the General Federation of Women's Clubs, the American Federation of Soroptomist Clubs, the National Woman's Party, and so on, or the AFL–CIO?

The equal-rights amendment, Senate Joint Resolution 80, now on the Senate Calendar, reads: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex." The AFL–CIO would annul it by means of the so-called Hayden rider which would provide that the amendment should not be construed to impair any rights, benefits, or exemptions now or hereafter conferred upon persons of the female sex."

The equal-rights amendment would give women what men long have enjoyed, equal protection of the laws under the Federal Constitution. Why a progressive organization, such as the AFL–CIO should wish to withhold this basic American heritage from women is hard to understand unless they fear the equal competition of women, as more and more automatic machinery displaces workers, and wish to continue and increase the handicap of special labor legislation for women.

In other words, is opposition to the equal rights amendment and insistence on the

Hayden rider a seemingly altruistic means of shutting off the competition of women?

Obviously women, shackled by protective and health legislation based on sex, which would be upheld and encouraged by a Hayden rider, would find their employment opportunities hampered especially in the better-paid jobs.

Men have always feared the competition of women and in the early days of labor organization refused to admit them to their unions. Only as a last resort did they encourage separate women's unions. Today women are a minority in the AFL–CIO.

The arguments used by the AFL–CIO against the equal rights amendment do not hold up when analyzed. The protective labor legislation for women which they fear it will endanger is out of date, for it was adopted when women were inexperienced in business and industry and were exploited as a source of cheap labor. Women, today, are essential to our economic system, and it is time the AFL–CIO retooled their thinking.

Whatever protective labor legislation is necessary can under the equal rights amendment be extended to men. This has already been the trend in minimum-wage legislation. It should be the trend in safety regulations, hour legislation, and healthful working conditions. Legislation for certain groups, such as mothers, veterans, minors, the blind, and so on, will be possible under the equal rights amendment. Since insurance statistics show that women outlive men and resist disease more readily, we must begin to think in terms of protecting men.

The AFL–CIO protests the equalization of the retirement age under social security benefits which the equal rights amendment would bring. A differential in the retirement age of men and women is mistaken chivalry which may make a few happy, but definitely depreciates the value of women employees and tends to keep them in the low-wage class.

This is the time for women to let their Senators know that they expect them to vote for the equal rights amendment, Senate joint resolution 80, and against the Hayden rider or any other qualifying rider.

ALMA LUTZ.

BOSTON.

Tribute to Robert D. Murphy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 16, 1958

Mr. WILEY. Mr. President, today, I am pleased to pay tribute to Mr. Robert Murphy, Deputy Undersecretary of State and the No. 1 United States troubleshooter, for the splendid work he has done in the Middle East. The Nation, I believe, again owes him a debt of gratitude.

We in Wisconsin are particularly proud of the record of Bob Murphy, an outstanding Badger, of which Wisconsin has contributed many, to serve our country in war and peace.

The Middle East crisis, of course, was no new experience to him. In recent years he has served with distinction in many critical situations, including: The North African campaign in 1942; securing Japanese cooperation during the Korean conflict; conciliating Tito's dispute with Italy over Trieste in 1954; working for solution of the Suez crisis in 1956.

Now, as a master diplomat, Bob Murphy has earned another plaudit of "job well done."

Recently, the Milwaukee Journal and the Washington Daily News carried some fine articles recognizing the merits of the work done by this top-ranking troubleshooter. I request unanimous consent to have the articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal]

BOB MURPHY: ONE-MAN TASK FORCE—CAREER AMBASSADOR FROM MILWAUKEE IS TOP TROUBLESHOOTER, WHOSE WORK IN LEBANON IS BUT ONE OF MANY DELICATE AND DANGEROUS ASSIGNMENTS HE HAS HANDLED

(By Laurence C. Eklund)

WASHINGTON, D. C.—"The Lawrence of North Africa," as Robert Daniel Murphy was called when he was paving the way for the Allied invasion of enemy-held Algeria in 1942, is up to his old tricks again. The big, genial Irishman from Milwaukee is right in the thick of behind the scenes negotiation and camel trading designed to calm the Middle East trouble spots. Last week he was flying about from Lebanon to Jordan to Israel, one jump ahead of new political and diplomatic developments.

His cloak and dagger work as the State Department's No. 1 trouble shooter has won Murphy a number of other titles—not all complimentary. He has been called a "diplomatic Kilroy" because his face always shows up wherever American interests are at stake.

Last week Pravda, the Communist party organ, called him "Mr. Morpheus," who, "with the help of American guns, was trying to put the Lebanese to sleep through his false, 'pacifying' activity."

MOSCOW RADIO CALLS HIM FASCIST

Pravda said a "comedy" was being staged by Murphy for the election of a new president, and Soviet Premier Khrushchev accused him of interfering in the domestic affairs of Lebanon. Moscow radio beamed at Latin America screamed about Murphy's "fascist" background.

A Moscow broadcast in Arabic called Murphy the "hero of a bribery case" in which, said the broadcast, 17 million dollars was given to "leading Japanese statesmen in order to safeguard a pro-American majority in the Japanese parliament."

In the Middle East now, as in north Africa during the war, Murphy was working under personal instructions from a President of the United States. He has had to endure criticism not only from the enemy but from persons in his own Government who did not understand exactly what he was doing.

While Murphy, as the No. 3 man in the State Department, carries the title of Deputy Under Secretary for Political Affairs, he is actually a sort of combination of secret agent, skilled technician, shrewd negotiator, and charming diplomat.

After 40 years in our Foreign Service, Murphy, now 63, knows his way around as no other American diplomat. He speaks French and German fluently and his knowledge of French is being put to good use in his current negotiations.

One of Murphy's associates described him as "the most successful American diplomat since Benjamin Franklin."

BRIEFED BY PRESIDENT

For his present assignment, that of calming things down in Lebanon, Murphy was summoned hastily to the White House while in the midst of testimony before the Senate Foreign Relations Committee. That was the day after the marines had landed in Lebanon.

His entire career in the Foreign Service, of course, prepared him for such a delicate mission.

Dispatches relating to the Middle East as well as the rest of the world flow constantly over his desk at the State Department.

This was a mission, however, that required intensive briefing by State Secretary Dulles, CIA Director Allen Dulles, and experts on the Middle East desk at the Department. He has a quick mind and readily grasps the gist of a situation.

Within hours, Murphy, leaving his wife behind in Washington, was being flown in a Government plane to Westover Field in Massachusetts, where he boarded a jet tanker for the first nonstop jet flight ever made from the United States to Beirut. The tanker hustled him to the world's newest trouble spot in 11 hours.

The lanky, soft talking Murphy's greatest asset is his ability to deal with all kinds of people, and that's what he has been doing in Lebanon—with President Chamoun, General Chehab, rebel leaders and religious dignitaries. He has a fantastic memory and remembers people's names. His conferences start early and run late into the night. He likes people and his warm, infectious, outgoing personality makes people like him.

Murphy, who weighs a lean, hard 160 pounds and stands 6 feet 2, has an uncanny knack of adapting himself to any situation. In north Africa he accompanied French Gen. Maxime Weygand, with whom he was negotiating, to mass every morning, an easy chore for him since he comes from a devout Catholic family which used to live at 605 North 25th Street, Milwaukee.

HIS MISSION: GET MARINES OUT

Murphy is a devoted family man. He met his wife, the former Mildred Taylor of Kansas City, Mo., who was a Red Cross worker, when he was stationed in Switzerland. Their daughter, Mildred, covers New York State politics for the New York Times. Another daughter, Rosemary, an actress, is currently playing on Broadway in "Look Homeward, Angel."

If a situation calls for the kind of poker that is played with cards as well as the diplomatic kind, Murphy is also adept at that, and likes to play for high stakes. He is also a weekend golfer and does rather well at the sport at the Chevy Chase Club here.

In Lebanon Murphy spent much of his time talking to both government and rebel leaders, trying to get them to agree on General Chehab as a compromise candidate for president. With a suitable new president installed in office there may be no further need in Lebanon for our marines, so in a sense it is Murphy's mission to get them out of there.

The last time this ace troubleshooter was sent out of the country to try to put out a fire was in February, when he was ordered to represent the United States in exercising this Government's "good offices" in Tunis and Paris in seeking to settle the hot dispute between Tunisia and France.

The French Government fell, and the immediate reaction was that Murphy's good offices mission had failed. To use the language of the State Department, some of his suggestions were not implemented, but there is reason to believe his missionary work is now bearing fruit as French-Tunisian hostility subsides.

HELPED SETTLE TRIESTE

Murphy himself believes that the fact that France and Tunisia were able to reach agreement on the problem of French troops in Tunisia, largely in accordance with the proposals of the good offices mission, made it a rewarding project.

In July and August of 1956 Murphy met with officials of Great Britain and France in London to discuss matters relating to the Egyptian nationalization of the Suez Canal, and helped untangle the perilous situation that developed.

His troubleshooting has even extended to doing something about the demoralization of the State Department produced by the McCarthy era. In 1954 he was called back to Washington to serve as a member of the Secretary's Committee on Personnel and partly as the result of his work the Department's morale has improved greatly the last 4 years, to a point where promising young people are again seeking careers in the Foreign Service.

In 1954 Murphy successfully mediated Yugoslav President Tito's dispute with Italy over Trieste.

As Ambassador to Japan he moved quickly to insure full cooperation with the United Nations' military commanders and to obtain Japanese understanding of U. N. military requirements. He assisted in winding up the tortuous negotiations for a Korean armistice, making several trips to the battlefronts with Gen. Mark Clark to confer with President Syngman Rhee.

As political adviser to Gen. Dwight D. Eisenhower, Murphy went to London to plan the big invasion of the European Continent in World War II. It was the first time in American military history that a civilian had sat with the General Staff, privy to all its secrets, in planning a campaign.

HELPED ARRANGE BERLIN AIRLIFT

He stayed with Eisenhower's staff until the conquest of Europe was complete, then became political adviser to the United States occupation staff in Germany. Gen. Lucius Clay said his skilled negotiations with officials in the dozen governments contributed largely to the success of the Berlin airlift.

Murphy helped lay the foundation for the healthy growth of West Germany as a democratic nation and partner of the United States.

This was particularly gratifying to the man who had lived across the street from Hitler in Munich in the early 1920's, when Murphy was vice consul there. The Milwaukeean had been screamed at by the budding Nazi leader, who finally had him chased out of Germany. The trouble came to a head in 1925 when Mrs. Murphy talked back angrily to a Munich shopkeeper who had called her a stupid American, and the incident was blown up by the Nazis into an international dispute.

One of Murphy's bad guesses was about Hitler, he recalls with amusement. As vice consul, Murphy wrote a report in which he dismissed the future fuehrer as a fanatic who would never amount to much. Before sending in his report, however, the young diplomat consulted the papal nuncio in Munich, a young Italian named Pacelli. Pacelli agreed with Murphy's estimate of Hitler and sent a similar report to the Vatican.

More than 20 years later, accompanying Allied troops into Rome in 1944, Murphy sought out his old friend Pacelli, who had become Pope Pius XII. Murphy joshed him about papal infallibility as regarded Hitler, and the pontiff smilingly answered that he had not been Pope in Munich days.

Concerning Murphy's earlier work in north Africa, General Eisenhower wrote in Crusade in Europe that "unquestionably his missionary work had much to do with eventual success."

It was in north Africa that Murphy assembled a staff of 20 assistants which has been called the ablest group of intelligence agents ever assembled by Americans.

MACHINEGUN IN BACK

Among the more dramatic incidents in his north African cloak and dagger work was the meeting he arranged near Algiers between Gen. Mark Clark, who came ashore from a submarine in a rubber boat, and certain French officers friendly to the allied cause, some weeks before the American invasion.

Perhaps the closest call during this north African intrigue occurred in November 1942, at the villa of Admiral Darlan, Vichy French supreme commander in Algiers. Expecting the Americans to land almost immediately, Murphy and a handful of his undercover men had arrested Darlan and Gen. Alphonse Juin, commander of the French Army in Algeria. The American landing was delayed and 12 miles off course, however, and Murphy and his men were outnumbered and marched off with machineguns in their backs. Six hours later the Americans came, and Murphy's little army was liberated.

In 1949 Murphy was given one of the State Department's first distinguished service awards for acts of national or international significance.

Murphy 2 years ago was named a career ambassador, the highest career job in the Government, paying $20,000 a year, and on at least two occasions in recent years he has been Acting Secretary of State.

WORKED IN ROUNDHOUSE

Military men traditionally have been suspicious of diplomats—sometimes called "those cooky pushers in striped pants"—and have been inclined to shy away from them. But the generals and admirals have had no trouble getting along with the tough-minded Murphy. He came up the hard way. As a boy attending Gesu parochal school he sold Milwaukee Journals at North Third and West State Streets and he worked in the Milwaukee road roundhouse while going to the old Marquette Academy. Fists were used often in his neighborhood, and he was a boxer in his college days at Marquette.

In his present job Murphy is the liaison between the State Department and the Pentagon. He meets regularly with the Joint Chiefs of Staff and he took part in the discussions that led to the decision to send marines to Lebanon.

[From the Washington Daily News]

BOB MURPHY

The Deputy Under Secretary of State, Robert Murphy, is home again, and he deserves all the plaudits that can be rung up from an appreciative nation.

He was President Eisenhower's special envoy to the Middle East in this great crisis. Maybe Bob Murphy's accomplishments can't be mapped with the exactitude of the *Nautilus'* spectacular feat, but certainly this able diplomat navigated an amazing course under the most challenging ice cap of the cold war.

The fact that the Middle East, with all the immense pressures and counterpressures, isn't at war today may be due in no small part to Mr. Murphy's skill and persuasiveness. In his own terse estimate, his mission turned out very satisfactory. Coming from the modest Mr. Murphy, it speaks a lot.

The Bizarre Conduct of Justice Douglas

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Saturday, August 16, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Chicago Tribune of Saturday, August 2, 1958, entitled "The Bizarre Conduct of Justice Douglas."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BIZARRE CONDUCT OF JUSTICE DOUGLAS

The strange immunity to prosecution enjoyed for many years by Frank Costello, the New York gambler, and his recent efforts to avoid serving a prison sentence for income tax evasion were reviewed in a Senate speech by Senator JOHN WILLIAMS, Republican of Delaware. The Senator rebuked Supreme Court Justice William Douglas for granting a stay of sentence to Costello after the full Court had refused to grant a review of his conviction, and remarked:

"I think the courts of our country should stop pussy-footing around with this racketeer and remember that 170 million law-abiding Americans have some rights as well as do these gangsters."

Senator WILLIAMS' indignation will be shared by many of his fellow citizens who recall previous bizarre behavior by Mr. Justice Douglas. In 1953 Douglas issued a last minute stay of execution to Julius and Ethel Rosenberg, the atomic spies. The full Court was called into special session and the Douglas order was set aside, after which the Rosenbergs were put to death.

Representative WHEELER, Democrat of Georgia, soon afterward introduced a resolution calling for impeachment of Justice Douglas, charging that he was unfit to dispense justice.

Traitors like the Rosenbergs and racketeers like Costello are entitled to, and have received, the protections which the Constitution provides for all persons. There is no reason for a Supreme Court Justice to go to bat for such people after their cases have been thoroughly reviewed. It is ridiculous to give Costello the benefit of the doubt after the trial court and two appellate courts found against him. Surely after all that study of his case, he is no longer entitled to the presumption of innocence.

Death of Representative William E. McVey

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, August 16, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two excellent editorials with reference to the late Representative William E. McVey. The first is entitled "William E. McVey" and was published in the Chicago Daily Tribune of August 13, 1958; the second is entitled "Representative W. E. McVey," and was published in the Chicago Daily News for August 12, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of August 13, 1958]

WILLIAM E. MCVEY

The death of Representative WILLIAM E. MCVEY is as great a loss to honest Republicanism as it is to his constituents. Mr. MCVEY represented the 4th District of Illinois, comprising part of Chicago and its

southern suburbs. He was a member of Congress for nearly 8 years.

His constituents had learned to love and respect him during the 28 years he was superintendent of Thornton Township High School and Junior College in Harvey. He was chosen by a caucus to challenge the Democratic incumbent in 1950, and won easily with the support of Democrats as well as Republicans. He wished to retire in 1956 and again this year, but both times he was persuaded to run again.

In Congress, he devoted himself in his own words "to the perpetuation of those freedoms which have made this country great." He fought the socialistic tendencies of the new dealers and their disciples. As a lifelong educator, he saw the dangers of Federal aid to education; as a former tax assessor, he opposed ever-mounting taxes, which he described as "like iceberg, we see only a small part of them." The country can ill spare men of his courage and sense.

[From the Chicago Daily News of August 13, 1958]

REPRESENTATIVE WILLIAM E. MCVEY

The sudden death of Representative WILLIAM E. MCVEY has deprived Congress of one of the staunchest advocates of government economy and sound money.

His career illustrates the fact that a well-educated man is capable of holding conservative economic views and fighting for them effectively.

He was the valedictorian of his class at Ohio University, and a Phi Beta Kappa. He was a master of arts and a doctor of philosophy at the University of Chicago.

He was himself a distinguished educator. As a young man, he was a school superintendent in the Philippines. For many years he was superintendent of the Thornton Township High School and Junior College, and once served as president of the North Central Association of Colleges and Secondary Schools.

For a few years before he entered Congress, he was professor of education at De Paul University. He was the author of several books and magazine articles in the fields of education and economics.

A year ago, Mr. McVey announced that he would not seek reelection in 1958, when he would have completed 4 terms. He was, however, persuaded to change his mind. He was renominated in the primary and would probably have been reelected.

The Republican party should make a diligent search for a man of equal qualifications and stature to take his place.

Senator Gore's Victory

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Saturday, August 16, 1958

Mr. MCNAMARA. Mr. President, one of the outstanding Members of this body is the junior Senator from Tennessee [Mr. GORE]. We all know of his fine record and of his ability.

It is gratifying that the people of Tennessee are also well aware of his record and ability, as his overwhelming victory in his State's recent primary election so conclusively shows.

An editorial in the August 18 issue of the magazine, New Republic, pays tribute to the Senator from Tennessee [Mr. GORE] for the way he conducted himself during that campaign.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD at the conclusion of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GORE STANDS PAT

There still is a moderate southern opinion to mobilize—at least when a man who has ability and energy and the confidence of his constituents places racial issues in some perspective—at least in Tennessee.

On television screens, through radio loudspeakers, on billboards lining the highways from the Great Smoky Mountains to the Mississippi River, during recent weeks Tennesseans were exposed to a saturation campaign of accusation and invective by 62-year-old former Governor Prentice Cooper as he sought to unseat the 50-year-old incumbent, Senator ALBERT GORE. Cooper charged that GORE by refusing to sign the southern manifesto, by voting for the final version of the civil rights bill, and by advocating reciprocal trade agreements, had betrayed the southern way of life and turned his back on his native State. GORE accepted the challenge and broadened the arena. Cooper appeared at rallies waving a copy of the southern manifesto. "Tennessee is a southern State, my first official act will be to sign this manifesto which my opponent refused to sign." He added that he would introduce a bill to reverse the Supreme Court decision of 1954. He also charged that the record showed that Senator GORE had "said 'aye' to the civil rights bill—after which bayoneted troops were sent to Little Rock to force integration at Central High School."

GORE ignored the manifesto—it never had any real meaning beyond that of a high-flown political gimmick, anyway—and the complete misrepresentation of the civil-rights bill he patiently explained away by the truth, terming the bill right-to-vote legislation. "I believe in the right to vote regardless of economic status, religion, or race." He also stated that he believed a mild bill would forestall passage of a severe bill for some time to come.

Seeking to take advantage of the recession and the admitted injury to a few Tennessee industries—textiles, pottery, zinc, aluminum—from foreign competition—COOPER struck hard at GORE's leadership in extending America's reciprocal-trade agreements. "His record proves him to be a global one world do-gooder, advocating a program that is sapping the life out of this Nation."

In a State whose two major crops are cotton and tobacco, GORE, long a disciple of Cordell Hull, pointed out: "Last year west Tennessee produced $73 million worth of cotton and $47 million of it was sold in foreign markets" and in east Tennessee he read from a telegram sent him by the Tobacco Leaf Exporters Association: "If this trade agreements act is not extended we certainly will lose a major part of tobacco exports totalling $300 million per year." And he reminded all Tennesseans that their State's share of industrial and agricultural exports last year was more than $230 million.

GORE assumed no labels. He gave the voters his record and stood by it, and on August 7 they gave him 6 more years to implement it. The people of Tennessee proved that agitators in Clinton and violence in Nashville were not their only frames of reference in selecting their political leaders. TVA and Oak Ridge are also in Tennessee.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 156, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

On Texan Waters

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. JOHNSON of Texas. Mr. President, an article in the New York Times has brought back many warm memories. It concerns what has happened in the hill country of Texas because the people of that area had the courage and the imagination to battle against great odds to tame the Colorado River.

When I was a small boy in the Texas hill country, the Colorado River was wild, strange, and unpredictable. There were times when its waters would be reduced to the merest trickle. There were times when it would become a turbulent, raging torrent, capable of inflicting millions of dollars in property losses and taking lives.

The taming of the Colorado was not something that happened overnight. It required a long struggle by the people of imagination against the people who were timid and hesitant and who did not wish to take the first tentative step.

There should be a roll of honor for the men who led the struggle that harnessed the waters of the Colorado. High in that roll would be the name of the late Alvin Wirtz, a man of daring vision and bold imagination, who had the foresight to realize the tremendous potentialities of the Lower Colorado River Authority.

High on the list should be the names of Congressman Buchanan, Congressman Mansfield and Congressman Homer Thornberry, Senator Connally, the late Senator Morris Sheppard, our junior Senator [Mr. YARBOROUGH], a former member of the Lower Colorado River Authority Board, and former Gov. James Allred were men without whom many of the dams could not have been built.

Because of their work, the face of the land has been changed—changed in a form which represents progress for our people. The Lower Colorado River Authority is an inspiring demonstration of what happens when men unite for achievement.

The history of the area can well be divided into two periods—what happened before and after the dams of the Lower Colorado River Authority were built.

Today, the highland lake country of Texas is one of the most beautiful stretches of land in America. Death and devastation have been replaced by irrigation and reclamation. Floodwaters which once meant destruction now mean power to help the people with their tasks.

The highland lake country is a paradise for fishermen and hunters. It affords vast expanses of water for boating and for swimming.

There is probably no river in America that has been better developed than the lower Colorado.

The article in the New York Times was written by Hugh Williamson, with whom I went to school at San Marcos. It may appear to some people to be too lyrical. But to those of us who knew the hill country and who knew Austin in the days before the Lower Colorado River Authority, it is, if anything, an understatement of the case.

I ask unanimous consent that the article from the New York Times be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 17, 1958]

ON TEXAN WATERS—TAMING OF COLORADO RIVER HAS CREATED A VAST VACATION LAND NEAR AUSTIN

(By Hugh Williamson)

AUSTIN, TEX.—Time was, within the memory of many Texans now of middle age, when the Colorado River of Texas dwindled to a trickle in dry years and then, when the rains came, surged gulfward in roaring, damage-and-death-dealing fury. When we went up into the hills for hunting and fishing, we traveled terrible roads, choking on dust one day and bogging down in mud the next. But all that is changed now.

The Lower Colorado River Authority built a series of 6 dams to provide flood protection and water for irrigation and electric power, and more spectacularly, thereby created a stairway of lakes that reaches 150 miles northwest from Austin, the State capital.

To tourists in these parts, the city itself, as well as its chain of lakes, is worth a visit. First know as Waterloo, it was a mere cluster of shacks, huddled along the river, when the site was chosen to be the capital and renamed for Stephen F. Austin, the colonizer. Today Austin sprawls over both sides of the river and stretches out into cedar-covered hills. The capitol building and the University of Texas tower dominate the skyline.

The Highland Lakes have made Austin very outdoors conscious. The river valley and its surrounding hills—once wild and inhabited only by a few scattered sheep and goat ranchers—is a vacation center of formidable proportions and fast growing in fame and popularity. All of the standard water sports, plus a few novelties, thrive in, on, and around the lakes' 76,000 acres, enfolded by more shoreline than the Texas gulf coast.

FISHING IN COMFORT

On Lake Buchanan, farthest upstream of the chain, an entrepreneur has constructed an enclosed, air-conditioned fishing dock with all the comforts of home. Another operator, at Marble Falls, has built a cable car that takes fishermen down a steep cliffside to some of the best white bass fishing anywhere. On Lake Austin, within the city limits of the capital, a sternwheeler, capable of carrying 200, sails up and down with tourist parties.

All of these attractions, and many others, are accessible by good paved roads that wind through the hills where, from an occasional peak, there is a view of glistening blue water dotted with fishing craft and sailboats. Through the trees a side road leads to vacation homes that may be a fisherman's modest shack or a millionaire's country showplace. Travel these ways in the starry dawn and chances are you will see swift-running deer. Now and then a sign indicates where to turn off and reach a commercial camp offering supplies, rent boats, bait, and cabins.

Some of these accommodations are plush, some inexpensive, and some rudimentary, ranging down to $1 per day for a camping site. There are 11 public parks throughout the chain of lakes. Streams of traffic, especially on weekends and holidays, indicate that these establishments are well patronized, and the vacation homes, rapidly increasing in number, are in constant use. Of all the diversified activities that the vacationists pursue, fishing is the biggest draw.

FORMIDABLE CATFISH

Take Marble Falls, for example, the site of quarries from which came the stone of the magnificent Texas capitol. This small town today is famous as a center for white-bass fishermen. The sporty black bass abounds there, too, as it does in all the lakes. The crappie is a source of fun and good eating for thousands, and catfish come in sizes up to 80 pounds. Carp fishing is a growing fad, and any youngster can take a string of fat bream.

Fishing is a fine and happy occupation on the lakes generally, though you can hear some picturesque language when a speedboat, hauling a water skier, whizzes too close to an angler's skiff. There is also a hunting season, when hundreds of nimrods invade the rugged hills—among the best deer-hunting areas in the Nation.

Some of the gunners will make it a combination hunting and fishing trip, some will bring their families for an outing and a visit to Longhorn Cavern, third largest in the world. At one time or another, this underground curiosity was a home for Indians and a retreat for Confederate soldiers. Legend says that Sam Bass, a colorful Texas bank robber, once hid there. The cave contians brilliantly encrusted formations, a giant icicle, and other marvels.

All told, it is a lot different along the Colorado, now that the dams and the good roads have been built. An autumn ride here is itself a rewarding experience as the sumac and oak trees flaunt their red and gold leaves in the crisp sunshine. The cedars provide a background of dark green and the lakes reflect the vast, immaculate blue of a Texas sky, adorned with white clouds drifting gently in a breeze fresh from the Gulf of Mexico.

The Housing Challenge of America

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD, somewhat condensed, an address by James H. Scheuer, a recognized authority in the field of housing, in which he outlines the housing predicament which faces our Nation and makes a number of thoughtful suggestions for dealing with it.

Mr. Scheuer is president of the Citizens Housing and Planning Council of New York and serves as chairman of the Housing Advisory Council of the New York State Commission Against Discrimination. He is also a private enterprise sponsor of title I redevelopment projects in Washington, Cleveland, St. Louis, and Sacramento, Calif. He has written and lectured widely on many aspects of housing and planning.

The address was given at a housing and urban renewal conference in Berkeley, Calif., sponsored by the American Council To Improve Our Neighborhoods—Action.

I invite the attention of my colleagues particularly to Mr. Scheuer's comments on middle-income housing. The Senate passed several weeks ago an admirable housing bill which I believe to be one of the best approved by this body in several years, yet the bill does not tackle directly the greatest obstacle which stands between the American people and the high standard of housing which we should and must achieve. As Mr. Scheuer remarks:

> The single greatest unserved market is that for inexpensive middle income rental housing.

I commend Mr. Scheuer's remarks on this problem to the attention of Members of the Senate, because we must, I am convinced, approach this problem of middle-income housing boldly and directly in housing acts which we must write in future Congresses.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE HOUSING CHALLENGE OF AMERICA

Among the domestic problems most in need of our immediate and serious attention is our nationwide housing predicament, which grows more costly and more painful to remedy with every year of apathy and neglect.

We are about to be inundated by demands for shelter and community services for which we are wholly unprepared. One-fifth of our present population lives in shamefully substandard housing. While we pride ourselves on having corrected the situation which existed 25 years ago, when one-third of our people were underfed and ill-clothed, we have utterly failed in that quarter century and are now continuing to fail to provide housing which will adequately meet minimum present, let alone future, needs.

Future needs will be even more pressing than those we have thus far neglected. The national population in the next two decades will leap from the present 165 million to 230 million people.

Virtually the whole of this extraordinary growth will occur in our metropolitan areas, chiefly in our suburbs. * * * The population of our 168 major metropolitan centers will be increased by no less than 50 percent.

* * * * *

We must face the fact that our metropolitan ares, in which more than 90 percent of our population will soon be living, are today in an acutely dangerous financial position. The exodus from our urban centers of the upper middle-income and professional groups have resulted in a loss, for the cities, of taxable income. The urban trek of great numbers of large-sized, low-income families has, at the same time, resulted in the social as well as dollar costs of overcrowding, undermaintenance, and inadequate city services. These long-term population trends pose problems of city and suburban finance with which we have made only the most tentative and halting efforts to come to grips.

Surely the existence of this extraordinary debit balance in an age of abundance and prosperity indicates that our national housing, slum clearance, and urban renewal programs need a complete review. We must now develop an inventory of presently needed municipal facilities of all kinds, and make plans to deal with the almost frightening growth in metropolitan requirements which will occur in the next two decades. We must shape a program of broad scope and continuity, and characterize it as one of fundamental urgency at every level of government.

* * * * *

THE ROLE OF THE FEDERAL GOVERNMENT

Federal officials must take a fresh, long look at the vast current shortages in housing, and in essential municipal facilities and services, which plague our urban centers across the country. They must also make themselves freshly aware of the unbelievable new demands which will be engendered by our future population expansion.

Our top Federal housing officials are experts at the complicated business of community development. I am profoundly convinced that, without exception, they are men with deep convictions making a vigorous fight for a broadly conceived housing and urban renewal program.

But their convictions frequently do not prevail in top administration circles. It seems apparent that theirs is not necessarily the viewpoint of the Bureau of the Budget, of the United States Treasury, of the Federal Reserve Board, of the Council of Economic Advisers, and, indeed, of the White House itself.

There is much evidence to indicate that the highest administration echelons still look upon the entire urban renewal and housing program as a device for stabilizing the economy—as a thermostat to be raised or lowered as economic and fiscal forces run their meteorological course. This point of view, if continued, will surely be recorded as one of the tragic blunders in domestic policy in modern times.

We have heard some talk in months gone by that it would be well to turn back responsibility for the provision of needed housing and community facilities to the cities and States. A few unalterable facts in this connection might be pertinent.

Consider, first, the total volume of needs for community facilities of all kinds. In 1954 the Department of Commerce estimated that our cities and States would be required to spend during the decade ending in 1964 approximately $200 billion to bring municipal facilities and services up to the minimum acceptable level. This would include expenditures for roads, schools, sewer and water facilities, hospital plants, and so forth. Against the target of $20 billion a year for 10 years, city and State governments are now spending approximately $10 billion annually.

But even with this inadequate rate of expenditure, cities and States have been forced to increase their bonded indebtedness threefold since 1946—from about $15 billion to about $50 billion. In order to meet the Commerce Department's estimate of community needs, they would have to treble their present level of bonded indebtedness in the decade to come.

Second, consider the immensity of our housing needs. By 1975 we will have to produce about $300 billion of new housing for 20 million additional new families in our expanding metropolitan areas. The Twentieth Century Fund's comprehensive study, America's Needs and Resources, advises us that we must spend, in addition, almost $100 billion to bring our present housing inventory up to a satisfactory minimum standard, by rehabilitation where feasible, and by demolition and renewal where the bulldozer is the only indicated treatment for the cancer of blight.

Last, the various public improvement programs for slum clearance, highways, schools and other municipal facilities are currently displacing each year several hundred thousand predominantly low income minority families. This is creating a demand for at least one million units of moderate price relocation housing over the next decade which will cost well over $10 billion. As a result, the most conservative and workmanlike estimates of our future housing needs by 1975 range toward $500 billion—one half a trillion dollars.

Which categories of housing are in the shortest supply? The single greatest unserved market is that for inexpensive middle income rental housing. The title I, section 220 slum clearance program fills the need for upper middle income rental accommodations. But it does not fill the vast need for lower midde income housing ranging in price somewhere between public housing and the luxury rentals which the title I program all too often produces.

The annual cost of servicing a 90 percent mortgage is the main determinant of rent levels in a title I project. And the financing charges for title I redevelopment housing are designed to attract private capital by paying the going private rate or long term loans. These relatively high charges make it impossible to produce redevelopment housing in the garden apartment category for less than $25 to $30 per room per month, or high rise housing, even of minimum deisgn standards, for much less than about $45 per room per month. It is a mathematical and physical impossibility to close the gap between these rentals and public-housing rentals by any possible combination of construction savings. The only way rent levels can be produced between public housing and upper income title I redevelopment housing is by making mortgage funds available at lower annual financing charges. Private enterprise can and must build this housing on a mass scale. Private mortgage funds cannot, however, be expected to finance housing at middle income rent level, since the interest and amortization rates paid on such funds must be lower than the going free market rate. These funds can only come from direct government or public-authority loans.

There is ample precedent for such a direct loan program on Federal, State, and city levels. The Federal college housing program, the direct State loan program in Connecticut, New York's Mitchell-Lama legislation, all point the way toward an effective Federal program of direct loans to stimulate privately built housing which would be available at middle income rent levels.

The second most urgent need is for a considerably expanded federally assisted public-housing program to build relocation housing, using vacant or nearly vacant land on the outskirts of our cities. To insure the basic political acceptability of the national highway and slum clearance programs, it is absolutely imperative that we provide adequate relocation housing.

It is clear, I believe, that there are urgent housing and community facility needs to be filled in our cities, and that to fill them even minimally, our expenditures must be vastly increased. Now let us review the comparable resources of our Federal, State, and local governments. Since 1939 the Federal tax take has increased about thirteen-fold, whereas the combined tax revenues of cities and States have increased only three times.

With Federal Government revenues rising four times as rapidly as the combined revenues of cities and States, it is clear that Federal authorities will have to make a substantial contribution to the enormous job of creating the cities and suburbs of tomorrow. By making minor and inconsequential tax concessions, the Federal Government is simply relegating responsibility for financing tremendous community projects to the cities and States.

Something seems terribly wrong when the annual subsidy to potato growers alone is larger than all current Federal contributions to urban renewal. It is high time that top administration policymakers undertake to support State and city urban renewal programs over at least a 10-year period. May I emphasize that in my lexicon, "support" means scope and continuity—a large and continuing effort. It may well cost the Federal Government $5 billion a year for the next 10 years to support a total program for developing and renewing our cities, towns, and surburbs. If so, this will still amount to less than 7 percent of the total budget. It will be no more than the cost of current aids and subsidies to agriculture, which benefit directly about one-tenth of our population.

Five billion dollars annually is a great deal of money. But our cities and suburbs, with their limited tax resources, simply cannot do the staggering job unassisted. The Federal Government, with its vast sources of income, must help, little as we may like to go to Washington for aid in solving local problems.

It should be understood that by far the greater part of the $500 billion of needed housing will—or should—be built privately, and will require little or no subsidy or out-of-pocket cost by the Federal Government once the stage is set.

I hope deeply and profoundly that our free-enterprise system will produce the great mass of our needed housing, and that public housing will play a useful but distinctly minor role in meeting the total housing demand. But in order for the great building industry to do the job, the Federal Government must make the requisite financial tools available both to the builder for rental housing, and to the purchaser for sales housing.

The Federal Government must expend enough "seed money" to assist cities in their basic planning and land acquisition. For these must come first before private interests can be harnessed to a crash program of urban redevelopment housing. In relation to total community needs for redevelopment and renewal, there should be a minimum authorization for Federal capital grant commitments of $500 million a year for a period of 10 years, with machinery for annual review of this amount.

THE ROLE OF THE STATES

State administrations can make a significant contribution to the urban renewal program.

First, they can press county and city authorities to realine and recast their lines of administration and planning. This means either modernization or abandonment of archaic governmental jurisdictions which hamper intelligent efforts at metropolitan and regional planning from coast to coast. We all know that overlapping and competing political subdivisions, and ancient and outdated planning, zoning and building laws can frustrate the most broadly-conceived plans for urban renewal.

Secondly, States can share with the cities the financial burden involved in meeting their required local share of total "seed money costs." At present, the Federal Government pays two-thirds of the net pump priming cost, and the local community is required to pay one-third. Until the Federal Government accepts a higher proportion—perhaps three-quarters of the total cost—the burden of paying one-third will be a difficult one for cities. The assistance of the States in sharing this burden will greatly stimulate the program.

THE ROLE OF THE CITIES

But in the final analysis decisions concerning community development must be community decisions and cannot be imposed upon a reluctant citizenry by any higher authority.

Our elected officials, both mayors and city legislators, must effect the necessary governmental reforms to enable our cities to get on with the job of intelligent planning. We as citizens must have the moral courage to accept the sacrifices and insist upon the hard decisions which are required to build American cities and suburbs of which we will be proud.

Furthermore, articulate support of an urban renewal program by industrial, business, labor, civic, and religious leaders will serve to spark more broadly-gaged Federal and State programs in support of city redevelopment.

Of one thing we can be sure. Ultimately we will have to pay for this immense population growth. The only question is how much do we pay and how do we pay it. We can continue to pay in terms of urban blight and urban sprawl; in terms of unnecessarily high police, fire, health, and delinquency costs produced by slums; in terms of a nationwide traffic snarl which is gradually choking the suburbs as well as the cities. Or we can maturely recognize that coping with our problems now is in the long run the cheapest and least painful way of paying for the future society of which we all dream.

Surely the job is not hopeless. Indeed, many cities have broad and well-advanced plans for urban renewal. Cleveland's urban renewal program is an excellent example of how a partnership between the Federal Government and an alert, responsible, local community can function. On April 3, 1957, sponsors were chosen for one portion of the promgram. Four months later construction was under way. By Thanksgiving, less than 8 months after sponsor selection, the first families moved into the completed project.

How did they do it? Cleveland Mayor Anthony Celebreeze did a remarkable job of organizing and galvanizing into action the city departments concerned.

Mayor Celebreeze was successful in stimulating Cleveland's industrial and financial leaders to band together in total support of Cleveland's urban renewal program. The Cleveland Development Foundation, headed by John Green, chairman of the board of the Ohio Bell Telephone Co., made available on a short term revolving loan basis several million dollars of "seed money" to assist the city and the private sponsors in getting the program into high gear. * * *

Significantly, the Cleveland office of the FHA was determined to prove that the FHA financing formula for title I redevelopment housing would work. The requisite mortgage insurance commitment was issued in the astonishing time of 25 days after an application was submitted.

And perhaps most important of all, the deadening hand of administrative bureaucracy was notably absent at all leveles of officialdom in Cleveland. In fact, as a sponsor of a portion of the Cleveland program I was encouraged and supported in my efforts to make this middle-income worker project an attractive and eminently livable one. I was given great freedom to strive for sparkling building design and landscaping, as well as to provide a comprehensive planning package of tenant facilities including outdoor sitting, recreation, and dining areas for adults and children; a splendid community building; and an intimate and neighborly family store in the center of the project. I emphasize this freedom to inject some style and gaiety into the project because frequently redevelopment sponsors are hedged about with frustrating limitations which doom a project to mediocrity from the very start.

* * * * *

To humanize our projects, a larger variety of physical building types should be used within each project—a pleasing and interesting admixture of high rise elevator apartments of varying heights with several types of row houses and garden apartment units.

Let us fortify this variety of structure with some variety of design. Why not use the marvelous variety of color and texture available in surface materials, fenestration, facade and landscaping to add some glamor and spirit to our projects? Architecture need not be a dismal science. No country in the world more nearly bursts with architectural excitement and creativity than ours. But one would never know it from the gray, drab, institutional pall which hangs, like a deadly smog, over many of our large projects.

We must plan both our central city projects and our new suburban communities for the many different population components which make up our rich American society. Federal statisticians may tell us that the average American family unit is composed of 2 parrents, 1.34 children, and three-quarters of a mongrel pup. Happily, we are not a nation of averages. We are a nation of differences and diversity. This is our strength, our resilience, and our hope.

So far, we have not produced housing to serve this great variety of Americans, for aging couples or single individuals, for couples with large numbers of children, certainly not at a price which the truly middle-income family can afford. We have shamefully negelected to meet the housing needs of 15 million American minority citizens.

Surely, in our efforts to rebuild our cities and create new suburbs we can, above all, make certain that these programs serve the total American community * * *

This is a time of excitement. We cannot permit this excitement to dissipate itself and end in frustration and defeatism. Let us work with pride and purpose today to shape the America we want to live in tomorrow. Never was the advice more timely. "Make no small plans—they have no magic to stir the minds of men."

The Critical Gap in United States Defenses

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from yesterday's Washington Post and Times Herald entitled "The Critical Gap," which contains some interesting and valid comments with respect to the outstanding speech made by the junior Senator from Massachusetts [Mr. KENNEDY] last week.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRITICAL GAP

New American achievements with nuclear-powered submarines are being hailed by

some as this country's answer to the Soviet sputniks. Nothing could be more misleading than such a comparison. It detracts not one bit from the significant and spectacular accomplishments of the Arctic navigators, or from the no less significant and spectacular American efforts in outer space, to say that assumptions that we have thereby offset the military lag represent the height of complacency.

Senator KENNEDY has performed a useful service in pointing to the critical period ahead—1960 to 1964—in which Soviet superiority in missiles may substantially reduce the value of this country's deterrent power. "Let no one think," he warns, "that a Soviet attack, inadvertent or otherwise, is impossible because of the H-bomb damage we would still hope to rain upon them." An even more likely, though probably less starkly dangerous, threat is that of limited war, under the shield of what President Eisenhower called Soviet ballistic blackmail. Mr. KENNEDY cites pertinently the inadequacies of sea and air lift illustrated in the expedition to Lebanon.

But the material shortcomings, unquestionably serious, are no more serious than many of the false assumptions that still seem to prevail. Among these, of course, are the magical protections attached to brinkmanship and boasts of massive retaliation, and the seeming conviction that virtue inevitably will trumph over evil because morality is on our side. Mr. KENNEDY properly insists that more than a military answer is needed, though his prescription for use of remaining American economic, ideological and geographic advantages is more than a little vague. But his comments about the exaggerated emphasis on military economizing, on the deference to the dangerous notion that the country can afford only so much defense, are altogether to the point. Unfortunately, such emphasis remains the rule.

The focus of military and economic effort is virtually important as the magnitude. All the evidence is, however, that the Soviet union is outstripping us not only in preparation for hot war, but also in the cold war—and this may have some bearing on Soviet willingness to discuss realistic arms control. The lamentable fact is that this is possible, not because of any innate Soviet superiority, but because the Soviet Union is devoting a far larger proportion of its resources to these efforts, is working harder than we are, and has a degree of direction and coordination which we and our partners have yet to achieve.

Spirit of the Bluestem Grass

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. CARLSON. Mr. President, last week there was a formal dedication of an historical marker citing the glories of the Kansas bluestem pasture region at Matfield Green.

The Flint Hills of Kansas are known nationally for their bluestem grass and their beauty. It was most fitting that at this dedication Walter A. Jones of Emporia should conclude his remarks by stating:

We here dictate a humble spot, not to the glory of God or man, but to the glory of the great spirit of the bluestem grass.

In view of the millions of people who have witnessed the beauty of the Flint Hill section, I ask unanimous consent that Rolla Clymer's editorial which appeared in the El Dorado Times on August 14 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPIRIT OF THE BLUESTEM GRASS

The formal dedication of the historical marker citing the glories of the Kansas bluestem pasture region, at the Matfield Green service area on the Kansas turnpike Tuesday, was done in excellent taste.

All the elements of the true Flint Hills spirit were present—deep pride in the hills and their utilitarian mission in the world of today, lofty sentiment for the glory that shines all around as a brooding benediction over the lives of the hills' people. All speakers were serious and down to earth, the program was invested with divine blessing, and the crowd of about 150 of the hills' faithful responded cordially to all phases of expression. The ceremonies lasted a brief half-hour, and were capped when Miss Ginger Countryman—true daughter of the hills—unveiled the marker for present and future generations of wayfarers to read.

What was said on this occasion may not be soon forgotten by those who listened. Particularly is this remark true of the words of Walter A. Jones, of Emporia, who with accustomed feeling and brilliance, paid a solemn tribute to bluestem grass. The winged words of his classic utterance are herewith reproduced in order that they may be properly preserved:

"The history of grass is as long as the record of time. Grass has clothed the framework of the ages and is the master work of God's maturity.

"Man that is born is of few days, but the bluestem grass lives on in the heart of the hills, never weary, always alert—for its rooted crown makes an eternal bond between the dead earth and the living mental and physical triumph, man himself.

"Man is born of the genes of the grass, is nourished in the red corpuscle of that which is all grass, and matured in the flower garden of the spirit. The spirit flows in a steady stream through the mammary vessels of incipient man to old age. Receding, but ever faithful even to the dearth of drouth and winter's solstice, it leaves its remnants to nourish until it returns with the robin. When grass ceases to nourish man, man returns to earth.

"Millions of years ago the place where we now stand was the heart of a great sea, where calcium and minerals were ground by the laving waters and mixed with the phosphates of mammals, then bound with grass. The pressure and heat of weight and motion bedded down the limestone breaks and crusted the residue in the mills of the ages.

"There was in the mind of the great spirit a home for man. When he had sealed and bound the book of time, he brought forth from the bowels of the earth the great rocky chain of mountains to the west of us and knocked down a greater chain into the underbelly of our continent to fill its place. He drained the waters of this great sea into the crevices of the earth, leaving to us the hills arrayed in whiteness, but nourished in grass.

"These are our bluestem hills, bounded on the west and north by the short grass, on the east by fields of grain, flowing south into the grass of the Osage Country.

"These bluestem hills turn the increase of nearly a million head of cattle into 100 million pounds of beef in one season, where once only buffalo and antelope roamed. This is the kingdom of the whiteface steer, the greatest industrial miracle of all time. God's cattle on a thousand hills!

"Grass is the peace of the south wind. Grass is the music of the west wind that glides in and out of season with the ease and beauty of the homeward curve of swallows. Grass is the beauty of the blob that is a March creeper, or the soft glint in a mallard's crest, the white blackness of a crow's wing, or the flash of a redbird's coat.

"Although we displace grass to bury our sorrows, it always returns as a certainty of immortality. From grass alone does God create out of the dead earth by the warmth and softness of His breath all that is beauty and peace and music. For there is no thing but which proceedeth out of grass.

"We here dedicate a humble spot, not to the glory of God or man, but to the glory of the great spirit of the bluestem grass."

Excessive Oil Imports Threaten Domestic Economy

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. YARBOROUGH. Mr. President, the world crisis has once again proved the dangers to our own security if we become too dependent on foreign oil. I have continuously urged that we adopt legislation which will limit imports in order that our own oil industry will be able to properly develop and meet our needs during uncertain times.

Recently, Mr. Eugene M. Locke, of Dallas, president of the Texas Independent Producers and Royalty Owners Association, pointed out other problems which confront the Texas oil producers.

Mr. President, I request unanimous consent to have the article which was published in the Houston Post on July 23, 1958, under the heading "End of Oil Imports To Texas Urged by Locke," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

END OF OIL IMPORTS TO TEXAS URGED BY LOCKE

AUSTIN.—An early end to imports of oil from other States into Texas was called for Tuesday by Eugene M. Locke of Dallas, president of the Texas Independent and Royalty Owners Association.

"Texas is and has always been fully capable of meeting all requirements made on it for both crude and products," he said. "and the action of the Texas Railroad Commission in increasing Texas production should remove any contention that out-of-State oil will be needed here."

Locke said several large Texas companies recently have built a pipeline from the Four Corners area which could be used to "pour up to 170,000 barrels of crude daily through west Texas into the Houston area."

Crude oil production at the far end of the new pipeline is unprorated and not subject to a ratable take, he said.

"The companies thus can use their own oil and produce at maximum levels in direct competition with Texas producers who are regulated by ratable takings and market demand requirements," the TIPRO chief continued.

"This pipeline could be used to rip apart the entire fabric of Texas conservation law, as companies owning the pipeline also own

the out-of-State wells supplying the line. It is clear they could favor their own production by cutting off 170,000 barrels daily of Texas production."

Locke estimated a loss of that amount of Texas production would cost the State's economy $100 million annually.

The shipment of Venezuelan oil into Texas and its movement through Texas pipelines to other States also was assailed by the TIPRO president.

He said the organization will seek "effective supervision of such crude movements into Texas either through legal, administrative or legislative remedies."

"It was bad enough that for years Texas had to hold the umbrella over other States which refused to cut back their production to demand," he said, "but now these companies with that unprorated oil are bringing it into Texas, raiding our own diminished market."

Locke said Texas has an unused production capacity of over 2 million barrels daily at this time.

"But not all of this can be moved immediately in an emergency," he said, "because domestic pipeline construction has been allowed to lag as a result of excessive imports."

Tenth Anniversary of SAC Headquarters at Omaha

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. HRUSKA. Mr. President, the Strategic Air Command was created and began operations in 1946. Two years later the headquarters was removed to the city of Omaha, with the new headquarters building some 8 miles distant from the city.

A week ago last Saturday there was celebrated the 10th anniversary of the location of headquarters of SAC, by ceremonies at Offutt Air Force Base, as well as a dinner and program in the evening.

Mr. President, I ask unanimous consent that the article giving the account of the celebration, published in the Omaha World-Herald, as well as an editorial from the Omaha World-Herald, both of August 10, be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

SAC, WORLD'S PEACE FORCE, SALUTED ON 10TH ANNIVERSARY—THREE GENERALS GIVEN PRAISE BY SPEAKER—CITY CALLED AIRPOWER CENTER OF WORLD

Omaha paid tribute to the Strategic Air Command Saturday night.

SAC was saluted by representatives of the entire community—the people, the businesses, the Government.

They gathered in the ballroom of the Sheraton-Fontenelle Hotel with leaders of SAC—past, present, and future—the Air Force and aviation in general.

FRIENDLY NEIGHBOR

The formal dinner marked the 10th anniversary of the establishment of SAC headquarters in Omaha which made the city the world's most important command post.

SAC was hailed by Omaha as a warm and friendly neighbor and as the organization which has employed cold efficiency to contain the threat of Russian aggression.

Arthur C. Storz, Sr., chairman of the observance, put the tribute into words.

PRAISE THREE

Much of his praise was directed to three generals—George C. Kenney, who organized SAC; Curtis E. LeMay, who brought SAC to Omaha and led it into the jet age; and Thomas S. Power, who is guiding SAC's advance into the world of missiles and space travel.

Mr. Storz recalled that when General LeMay and his staff moved to Omaha 10 years ago, headquarters was set up in the Martin bomber plant and that he brought with him a skeleton organization.

HUNDRED MILLION INVESTED

Said Mr. Storz:

"Today we have an establishment in which there is invested $100 million. These figures, of course, do not include the aircraft at the base.

"Step by step, over the last 10 years, a lot of difficulties presented themselves, but our citizens of Omaha, plus General LeMay and his wonderful staff of executive officers, cooperated until one by one we whipped all these troublesome situations into line.

PRAISES SENATORS

"We always had the complete cooperation of our Senators, Wherry, Griswold, Hruska, and Curtis, and they always did a wonderful job in getting things done for us in Washington whenever possible.

"Today we can truly say that here in Omaha at the headquarters of the Strategic Air Command we have the air-power center of the world."

Mr. Storz quoted Gen. Lauris Norstad, Supreme Allied Commander in Europe, as saying he has "unmitigated confidence in our airpower."

FEW CHANGES LIKELY

General Norstad, said Mr. Storz, states "he believes war in Europe is highly improbable as long as NATO keeps its shield up and SAC's sword is on the alert. General Norstad does not foresee any technical changes or weapons system advances by the enemy that would make SAC ineffective in the next 5 to 10 years."

CITY URGED TO MODERNIZE

Lt. Gen. Elwood R. (Pete) Quesada, World War II hero who now is President Eisenhower's assistant for aviation, urged Omaha to modernize its air transport facilities.

"Omaha, if it is to retain its position as the hub of industry and the hub of transportation in the Midwest, must provide modern facilities for commercial aviation," he declared.

"If Omaha is able to foresee the needs of the future, then it will reap the rewards of the future," he told the gathering.

Mayor John Rosenblatt presented General Power and SAC a scroll expressing the appreciation of Omaha and Nebraska to the Strategic Air Command:

"On this, the 10th anniversary of the coming of Strategic Air Command headquarters to our community, the grateful citizenry of Omaha and of Nebraska expresses its profound respect, admiration, and thanks to the officers and men who safeguard our security.

"Omaha and Nebraska pride themselves on being the home of the strength of the free world, the Strategic Air Command, whose indomitable vigilance, resolute diligence and courageous gallantry are making so historic a contribution to the twentieth century."

The scroll was signed by the mayor, Gov. Victor E. Anderson, who also was present, and Mr. Storz.

TEN NEIGHBORLY YEARS

When SAC came to Offutt Air Base in 1948 it was not a new experience for Omahans to have men in uniform living among them in peacetime. Omaha had been a military headquarters city since the days of the Indian uprisings.

But the coming of SAC was different. Many Omahans were surprised to find that their new neighbors were a spit-and-polish outfit, wholly devoted to what they were doing. Such dedication to duty seemed almost unnatural in peacetime. Didn't these SAC people know the war was over? Weren't they overdoing things with their perpetual vigilance?

It didn't take the people of Omaha and the surrounding area long to understand. They learned that the Strategic Air Command is not just a collection of control centers, bombers, tankers, and missiles, impressive as these tools are, SAC is people. Warm and friendly people. Neighbors who take an active part in community life. But they are people who have a special job to do and who, day and night, must live in the belief war may be only a few minutes away.

The rest of us now understand well, and share the pride that SAC people have in their job—which is nothing less than to guarantee the peace of a fretful world. So when we congratulate the men and women of SAC on their 10th anniversary among us we cannot help but bask just a little in the reflected glow. We're proud to be the home of the Strategic Air Command, and proud to be the neighbors of the men and women who make it what it is.

Awareness of Freedom Needed

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Awareness of Freedom Needed," written by Jayne Ellison, and published in Camerica of August 3, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AWARENESS OF FREEDOM NEEDED

(By Jayne Ellison)

There's an unreasonable man working as a technical consultant at Wright Air Development Center.

George Bernard Shaw once said: "The reasonable man adapts himself to the world; the unreasonable one persists in trying to adapt the world to himself. Therefore, all progress depends on unreasonable men."

Dieter H. Schwebs, who became an American citizen in June, says there is no achievement in conformity whether in human relationships, education, or technological advances.

"We are living in a state of total war from the point of view of spirit, economics, and technology," Schwebs reflected.

"I have a nightmare concept of the future, unless the citizenry rouses from its apathy and takes the initiative against communism and its ideas."

Schwebs foresees the United States as an isolated island, doomed by economic blockades. Driving force in the drama would be Russia, which would implement its nonshoot-

ing war by delivering ultimatums to all countries in Europe and elsewhere.

Russia's race for "accumulation of knowledge" will be the catalyst in implementing economic disaster for the free world, the last stronghold for individualism. Readiness in Russia's timing will be marked "not by ability to produce the most weapons, but by superior technological knowledge."

Soviet scientists are spurred by political ideas, working climate and environment conducive to concentrated experimentation and conditioned thinking, according to Schwebs. He met many of them in Barcelona, Spain, while attending international scientific meetings.

What line of counterattack is needed to offset the Russian offensive?

First. The scientist points out, there is a need for prointellectualism, compounded by full awareness of individual freedom as guaranteed in the Constitution.

Second. Establishment of institutes for mathematics, chemistry, and physics to provide young Americans with facilities for specializing and concentrated study.

Third. Accelerate basic research programs in natural sciences to increase understanding and provide a basis for new concepts.

Fourth. Jolt complacency into its proper illumination by examination of history and the fate of societies where high standards of living were believed protection against all forces.

Fifth. Approach education as an adjustment to thinking, rather than an instrument hoping to achieve adjustment to life.

"The future of my two small daughters and all the children coming along in this country depends on the challenge offered to gifted prospects," Schwebs said.

"School need teachers with knowledge, lots of it, and less gimmicks. Creative thinking is stimulated by well-educated teachers and it is stifled by extras, thus wasting talent.

"Complacency and materialism are diabolical partners in the struggle to preserve individual freedoms. History shows ancient Greece and the Roman Empire as outstanding examples of belief that barbarians wouldn't concern themselves with societies having such high standards of living. Smugness and a false sense of security, coupled with complacency, spelled the doom of dictators from the time of Alexander the Great, down the line through Hitler and Peron.

"A German proverb, with a counterpart in other languages of the world, is a key to the demises: Arrogance comes shortly before the downfall."

Survival, despite being bombed out six times in his native Germany, sharpened Schweb's focus on materialism. The final rout was easy, since his total possessions less than filled a suitcase. Paris was to be his destination, before coming to the United States.

Reflective evaluation placed human relationships and intellectual stimulation, along with individual freedom, as the only real reason for living. Secret meetings with friends in Berlin, spiked with conversation and music, carried him through the Nazi era and its threats to individual thinking.

"There must be a new awareness of how priceless individual freedoms are * * * which mark true security * * * instead of materialism and the false hope that money will buy anything," Schwebs said.

"It isn't enough to be against communism or sin, but we must all know what we are for.

"We are obligated to articulate on what we advocate and to present ideas and ideals to the world.

"Selling ideas, rather than possessions, is one of the prime responsibilities of the future."

What brought Schwebs to the United States and his recently acquired citizenship?

He believes his adopted country is the sole bulwark of freedom in the world and that technological developments, no longer stock-in-trade in Europe, must generate from here. His goal: Contributing to prevention of a hot war or the alternative economic isolation.

This Congress Has Made a Formidable Record

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "This Congress Has Made a Formidable Record," written by Robert C. Albright, and published in the Washington Post and Times Herald of August 17, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CONGRESS HAS MADE A FORMIDABLE RECORD

(By Robert C. Albright)

A Congress that faced up to the dazzling new world of tomorrow while grappling with the problems of today is now concluding a really remarkable session.

Not perhaps since the historic 73d Congress and Franklin Roosevelt's first 100 days has a Congress turned in such a formidable record of work done.

More than that, the 85th Congress, 2d session, prodded, probed, and fretted its way into a completely new era of manmade moons, intercontinental missiles, polar-probing submarines. It even set up a new Government agency to cope with the problems of space. On top of all this, it created a new star and a new State—out of the Territory of Alaska.

This hard-working Congress, whatever its shortcomings, ground out legislation like a box factory, most of it keyed to the urgent problems of our day and to the needs of another day just over the horizon.

In a way, it was really three sessions of Congress rolled into one: a sputnik-inspired January session which searched out 17 ways to improve our research and defenses; a midterm pre-Easter drive to halt the recession with an imposing parade of job-producing bills, and now a stemwinding finale charting foreign trade-aid history and underwriting a new social security structure.

DID WELL BY IKE

Overall, it was a bipartisan Congress which gave President Eisenhower most of the things he wanted, however, dismayed the administration may have been at some of the Democratic embroidery.

One of the President's imperatives was a complete Defense Department reorganization to place more power at the top. This ran into such a congressional buzz saw that it seemed unattainable. But in the end the President got a bill he could accept.

In seeking parallels to this productive Congress, old timers could find no session in the last quarter of a century which turned out more legislative grist. Oddly, however, many regarded the Republican 80th Congress, attacked by former President Truman at the time as the "second worst" Congress in history, as a runner-up to this one in significant performance.

Despite Mr. Truman's wrath at some of its legislative failures, it was the Republican 80th which passed the Marshall plan and later laid the groundwork for the North Atlantic Treaty Alliance through the "Vandenberg resolution." It was the Truman-lambasted 80th Congress also which passed the Taft-Hartley Act and overrode a Truman veto to pass a tax cut.

STATESMANLIKE FORMULA

The Democratic Congress now dying, much like the Republican 80th, was faced with the problem of how to work with a President of the other political faith during a period of great domestic and international stress.

At the outset of this session, a basic leadership decision was reached. The decision was not to risk, under any circumstances, a head-on legislative-executive clash. It was decided to mimiumize politics as much as possible and try to pass a substantial program on a bipartisan basis. The formula worked.

Chief architect of 85th Congress strategy was Senate Majority Leader LYNDON B. JOHNSON, Democrat, Texas, a skilled legislative craftsman and an old hand at getting things done with a minimum of controversy. Across the Capitol, Speaker SAM RAYBURN, Democrat JOHNSON's onetime political mentor, gave the program his blessing and helped carry it out.

Throughout most of the session, JOHNSON worked with a bare 49-to-47 Senate Democratic majority, obviously too narrow a party edge to bull through any partisan program. So in many of the big tests JOHNSON led in double-harness with Senate Republican Leader WILLIAM F. KNOWLAND, California, or Senate GOP policy chief STYLES BRIDGES, New Hampshire. His close working relationship with the White House and key Cabinet officials helped round out the bipartisan performance.

A CABINET CATALYST

Speaker RAYBURN and another "old pro," House Majority Leader JOHN W. MCCORMACK, Democrat, Massachusetts, directed the House end of the strategy, working in harness on many a bipartisan vote with House Republican Leader JOSEPH W. MARTIN, Jr. Massachusetts.

A recent addition to the Eisenhower administration, Treasury Secretary Robert B. Anderson, helped bridge the gulf between the two parties on the politically explosive tax issue. Anderson, a former Texan, is an old friend of JOHNSON and RAYBURN. Following a round of informal conferences, RAYBURN and Anderson agreed not to press for tax reductions at this session.

When this 7½-month-old session convened, the possibility of substantial achievement of any sort seemed extremely remote. With the 1958 congressional elections in the offing, both parties were maneuvering for political advantage, each determined to land a haymaker on the other. Russia's Sputnik I had just handed the Democrats a wonderful chance to challenge administration "lack of urgency."

In addition, the first twinges of the business recession were being felt in the land. It looked like Democratic weather, but the Democrats differed on what to do about it.

JOHNSON argued that the best politics in these circumstances was no politics. In his opening speech to the January 7 Senate Democratic caucus, widely described as "the Democratic state of the Union message," he cautioned against "dissension" or "narrow partisanship."

"We must work as though no other Congress would ever have an opportunity to meet this (space) challenege, for, in fact, none will have an opportunity comparable," he said.

At the same time, he said Congress could not afford to ignore the soft spots in the economy or forget pressing farm, school, housing and resource problems.

Six weeks later, at the February 23 Democratic dinner honoring Harry Truman, JOHNSON outlined a 10-point program which was to become sort of work-sheet for the session.

He called for a "mature" outer space policy and American use of United Nations machinery for peace. In addition, he proposed that Congress pass education, farm, housing, small business, aid and trade, union reforms, natural resources, and public works measures to meet problems "crying aloud" for action.

When he had finished, Speaker RAYBURN stepped up to the microphone and told the Democratic celebrants:

"LYNDON JOHNSON has laid down a program here tonight, and we are going to put it through Congress."

Practically all of JOHNSON's points, plus a number of antidepression late starters and a liberalization of social security benefits, passed Congress in one form or another. There were important detours, of course, like the original farm and river and harbors bills, which bumped into Presidential vetoes, and the union reform and housing bills, which ran into House trouble.

This leadership record is cited because the 85th Congress, 2d session, didn't just happen to turn out all that work. It had no more, no less self-propulsion than any other Congress. Fact is, it had to be led.

In this instance the Texas leadership team of JOHNSON and RAYBURN, working with important Republican assists, provided just the right pull.

Another important attribute of the Johnson-Rayburn leadership was its follow-through. Again and again bills and programs that appeared to be dead were suddenly back on their feet after inhaling deep draughts from the oxygen pump. The farm program, for example, underwent one such resuscitation after another.

Senate leaders followed up personally on each of the 17 recommendations made by JOHNSON's Senate Preparedness Subcommittee after its missile-satellite probe. That is why Congress voted some $815 million more than the President requested in defense funds, including extra money for long-range missiles and missile-firing submarines as well as big bombers.

Eventually, the productive 85th got around to passing bills in practically every legislative field. Some bills which had been buffeted around in committees for years came out of the crush and were suddenly in the money.

Unfortunately, this didn't work in every case. Bills with exceptional merit often die like flies when the adjournment bell rings because of influential opposition or a hostile House Rules Committee. This Congress will prove no exception.

But by and large, this session came up with a record the President will find it hard to reject, and one which most incumbent Republicans (and Democrats) can run on. In a word, the record has something in it for everybody.

If the current election trend appears to run heavily with the Democrats, chances are you can lay it to factors far removed from this bipartisan Congress.

The voters still have a way of voting Republican in good times and Democratic in bad, regardless of what bills Congress passed or rejected. Another factor apparently favoring the Democrats is the current Middle East crisis. The Democrats attest, from sad pre-1952 experience, that cold wars have a way of reacting against the party in power.

That may or may not explain why the administration's handling of the Middle East crisis is the most absorbing topic on and off the floor of the dying Congress, and the subject most likely to influence the November turn of the clock.

When the new (86th) Congress comes back in January, it is likely, therefore, to be with considerably enhanced House and Senate Democratic majorities. Senate Democratic estimates of pickups range all the way from 4 to 10. House Democratic expectations run around 30 to 40.

All of this would make for a much more liberal Congress than the one now expiring. So if you are tempted to label this one "New Dealish," hold up a bit. The next could be a throwback to the thirties.

Whatever happens in November, all things being equal, the present congressional leadership isn't likely to change. Speaker RAYBURN and LYNDON JOHNSON, although moderates by instinct, know how to work equally well with a liberal majority or a conservative minority. In any event, neither is likely to be successfully challenged.

One of the holes in the record of the present Congress is the failure to make any change in Senate Rule 22, the Senate's virtually unlimited debate rule, requiring the votes of 64 Senators, two-thirds of the full membership, to force a bill to a vote.

Next January liberal Democrats, teaming up for the second time in 2 years with Vice President RICHARD M. NIXON and his following of Senate Republicans, could change this. They expect to strike at the start of the session on the theory that the Senate, like the House, must adopt its rules at the start of a session—by majority vote.

One possible compromise is a plan jointly put forward last year by leaders JOHNSON and KNOWLAND, permitting two-thirds of the Senators present and voting to cut off debate, with no other strings attached.

A statistical fact to remember: The Senate next year will have 98 Members, instead of 96, as Alaska comes into her own as a State. Unless observers miss their guess, admission of Alaska means two more votes for the almost inevitable change in the Senate debate rules. It's just one more symbol of the slow but steady decline of Old South influence in the Senate.

The Eisenhower Doctrine II—The U. N. and Democracy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. HUMPHREY. Mr. President, the attention of the world is focused upon the special session of the United Nations General Assembly. The President of the United States laid down a program for peace in the Middle East. It is appropriately termed by the New York Times "The Eisenhower Doctrine II."

The President's program is the subject of considerable debate and discussion in the United Nations. Actually, it places before the U. N. a real challenge—a test of the U. N.'s ability to create and establish long-range economic policies and to induce political settlements in troubled areas.

Two excellent editorials of the New York Times of recent date focused attention upon United States Middle East-ern policy and the problems that the policy faces in the United Nations.

I ask unanimous consent that the editorials "The Eisenhower Doctrine II" and "The U. N. and Democracy" be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE EISENHOWER DOCTRINE II

The plan for Middle Eastern peace, security and economic development outlined by President Eisenhower before the United Nations General Assembly has been welcomed throughout the free world. At the same time it is recognized that the practical problems involved are enormous and that one of the first conditions must be the restoration of security and stability in that region.

To make arrangements for such restoration is the primary responsibility of the United Nations and the paramount business of this Assembly session which has been called not to obtain the western troop withdrawals, as Mr. Gromyko insists, but, as Mr. Lloyd emphasizes, to consider the complaints of Lebanon and Jordan of outside interference in their affairs. These complaints and the American and British responses to them raise a problem which, as President Eisenhower emphasized, involves the right of small nations to call for assistance against direct or indirect aggression. The President rightly warned that "if it is made an international crime to help a small nation to maintain its independence, then indeed the possibilities of conquest are unlimited."

The right to call for assistance, as even Mr. Gromyko concedes, is guaranteed in article 51 of the United Nations Charter in case of direct aggression through armed attack. But he rules out such a right in case of indirect aggression, although the United Nations has long been trying to deal with this new tactic.

The very Assembly now considering the matter condemned inflammatory propaganda in 1947. It adopted an "Essentials of Peace" resolution in 1949, condemning any acts, direct or indirect, aimed at subversion or fomenting of civil war. It passed a "Peace Through Deeds" resolution in 1950, outlawing as the gravest crime the fomenting of civil strife in the interest of a foreign power or intervening in the affairs of another state for the purpose of changing its legally established government by the threat or use of force. Finally it adopted the "Uniting for Peace" resolution which empowers the Assembly to act when the Security Council is paralyzed by the usual Soviet veto.

This is legal and practical background against which the Assembly must now act. But President Eisenhower also made a point regarding American policy which applies when the United Nations cannot act and which, in effect, is an expansion of both the original Truman and Eisenhower doctrines. The Truman doctrine pledged aid to Greece and Turkey against direct and indirect aggression, but primarily by economic means. The original Eisenhower doctrine pledged both economic and military aid to nations against overt armed aggression from any nation controlled by international communism. In the United Nations message President Eisenhower now declares that "the United States reserves, within the spirt of the Charter, the right to answer the legitimate appeal of any nation, particularly a small nation," to resist any aggression, direct or indirect, from whatever source it may come.

It is up to the United Nations to provide help to small nations calling for it, as the President proposes. But the expansion of the Eisenhower doctrine marks a milestone

in the development of American foreign policy which further commits us to the cause of peace and freedom.

THE U. N. AND DEMOCRACY

In its latest effort to wrestle with the Middle Eastern problem, the United Nations General Assembly is again confronted with an issue that reaches far beyond the Middle East and involves the basic character and possibly the very existence of the United Nations itself. The issue, always in the background ever since its foundation, is whether the United Nations shall function as an international democracy based on the sovereign equality of all its members, as provided in the Charter, or whether it is to be dominated by a dictatorship of big powers making their own deals in a game of power politics.

The first concept of an international democracy has always been espoused by the West, in particular by the United States, which has made the United Nations the fulcrum of its foreign policy. It is espoused again in the present instance, as eloquently demonstrated by President Eisenhower's address, in which he reaffirmed our faith in the United Nations as the world body primarily responsible for both international peace and security, invoked the United Nations' own resolutions against any kind of aggression and repudiated the very idea of any one power or group of powers dominating the world. In keeping with this concept the United States, while presenting its own proposals, gladly backs the efforts of smaller nations to find solutions for the Middle East through the United Nations and its Secretary General.

In contrast, the second concept of big power dictatorship always has been and is still propagated by the Soviets. It was expressed by Mr. Gromyko as early as the San Francisco Conference of 1945, when he demanded that the smaller nations should trust the big powers and for the rest observe discipline. It has been expressed by the deluge of Soviet vetoes which has paralyzed the Security Council, by the Soviet attempt to take important problems, such as disarmament, out of the United Nations and, most pointedly, by the Soviet drive for a summit meeting to decide world issues by a few big power heads of government whom the Soviet must view as dictators akin to their own, which the western statesmen are not.

In line with that concept Mr. Gromyko again calls for a big power agreement on the Middle East as an essential precondition for a settlement. But the ultimate Soviet goal, as bluntly proclaimed by the Kremlin and backed by ballistic blackmail, is, of course, not dictatorship by several but by only one big power in a final world triumph of communism.

There are those who criticize the American concept of the United Nations as too idealistic and back the Soviet concept of big power rule as closer to the realities. The big powers cannot, of course, abdicate their responsibilities, and the United States has specifically reserved the right of individual and collective self-defense within the spirit of the charter whenever the United Nations is unable to act. But when the United Nations is able to act, as in Korea, or is at least able to take a stand, as on Hungary and Suez, the United States has supported it and will do so again in the Middle East. It is, however, up to the smaller nations, constituting the great majority in the United Nations, to make international democracy work, and do so without penalizing those who bow to United Nations decisions or rewarding those who systematically defy them.

Support in Oregon for Two-Price Plan for Wheat

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. NEUBERGER. Mr. President, the East Oregonian of Pendleton, Oreg., reflects in its editorial interests the paramount importance of wheat in the economy of its area of circulation. Consequently, the editor studies closely the direct or indirect impact of all agricultural bills on the one basic commodity grown in quantity in the Northwest. Umatilla County, of which Pendleton is the county seat, is one of the great wheat counties found in the Columbia River watershed. The States of Oregon, Idaho, and Washington produce the bulk of the soft white wheat grown in this country. So it is understandable that the newspapers of the Northwest wheat belt report to their readers every word or action, coming from Washington, which in any way influences the price of their principal crop.

In a similar vein, the newspapers of the Midwest, where corn is king, follow avidly the measures which concern this basic crop. In the South, in like manner, no word touching on cotton fails to be studied and reported by the region's press.

In preparing the Monday, August 11, 1958, issue of the Pendleton East Oregonian, the editor went to the CONGRESSIONAL RECORD, where his practiced eye discovered references to the domestic parity program—a subject of profound interest to every wheat grower. I ask unanimous consent, Mr. President, to include in the Appendix of the RECORD the editorial thus inspired.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pendleton (Oreg.) East Oregonian of August 11, 1958]

IT'S STILL VERY MUCH ALIVE

Men who understand the problems of agricultural have long recognized that there is no pat solution that can encompass all the basic crops, those crops that are provided Government price support. That has been evident in recent weeks with the introduction to and passage by the Senate of legislation that would determine price supports for corn, rice and feed grains according to market prices of the previous 3 years. Wheat was excluded for the reason that wheat has special problems.

The best special program for wheat, according to our thinking, is the domestic parity plan which would provide Government support for that wheat which was consumed domestically and would permit free marketing without price guaranty of all wheat that went into the export market and all that went into the feeding of livestock and poultry.

Among early exponents of the domestic parity plan were members of the Oregon Wheat Growers League. They have spread the gospel far and wide, have gained much support in wheat producing States, and among Senators and Representatives from those States.

The domestic parity plan has had rough going in the Congress because of opposition by Representatives of corn-producing States. They have not wanted wheat to become a feed for livestock at prices that would be competitive with corn. There are some favorable signs that that opposition is weakening.

A leader in the Senate for the domestic parity plan has been Senator FRANK CARLSON, of Kansas; a State that produces one-fourth of all the winter wheat grown in the United States. Senator CARLSON introduced in 1956 and again in 1957 legislation which would establish the domestic parity plan for marketing of wheat.

In an exchange of remarks on the floor of the Senate late in July with Oregon's Senators NEUBERGER and MORSE, Senator CARLSON revealed that he plans to introduce domestic parity plan legislation again early in 1959.

During the discussion, Senator CARLSON made statements which will, we are sure, be of interest to wheat producers here as well as whose economy and that of the wheatgrowers is inseparable. We quote from the CONGRESSIONAL RECORD of July 25:

"Mr. CARLSON. The Senator from Oregon [Mr. NEUBERGER] comes from a good State so far as dealing with domestic parity is concerned, because, historically, the McNary-Haugen bill was sponsored by a very able Senator from the State of Oregon many years ago. I knew him quite well personally. The Senator from Oregon, therefore, has a very good background for this type of program.

"Frankly, I cannot see any future for the wheatgrowers of the Nation except through a domestic parity program. I believe that has been proved this year. We are operating under a limitation of 55 million acres, in accordance with Federal statute. Yet, as the distinguished Senator from New Mexico [Mr. ANDERSON] stated last night—and he expressed it very well—based on 1938 production figures, we are today, on 55 million acres, producing the equivalent of 82 million acres in 1938. We are doing that because we have improved our methods and increased our soil fertility, and so forth. Therefore, I cannot see any future for the wheatgrower except through a program of this type.

"Mr. CARLSON. If it could be put into effect without the great burdensome surpluses we have at the present time it would be a good program. It would provide 100-percent parity for the portion consumed in this country; the remaining portion would be exported or fed on the farm, without supports and without subsidy.

"We must be frank in a discussion of this situation. We have and we will have next July more than 1,200,000,000 bushels of wheat in surplus. Therefore I would be less than frank if I did not state that we must have some acreage controls until we dispose of some of the surplus.

"Second, we are having difficulty in the foreign markets. We are being criticized by our neighbor to the north, Canada, and by some other countries, for dumping our wheat by subsidizing it as high as 95 cents a bushel. I would like to say that the people who contend that the proposed program is a dumping program had best look at our present program. The argument against the proposed program, that it is a dumping program and would endanger us internationally, is not a sound one, because we are already doing that, although I do not agree it is justified.

"Mr. NEUBERGER. I can understand that. I shall ask the Senator from Kansas about one crucial agricultural problem which is particularly vexing in the Pacific Northwest. Along the seaboard in Oregon and Washington we have a very fine, cool climate, suitable for the raising of poultry, such as turkeys and chickens. The wheat grown in eastern Oregon and in eastern Washington is the logical feed for that poultry.

"However, under the existing situation, the wheat is supported at too high a price for the poultry raisers to buy it as feed for their turkeys and chickens. Is it not true that if the domestic parity or two-price plan were in effect, that particular dilemma might be solved, and the portion of the wheat crop available for feed could then be sold to the poultry raisers at prices which they could afford to pay and still make a profit on their operations?

"Mr. CARLSON. One of the complaints we receive from the corn-growing sections and the feed-producing areas of the Nation is that if quantities of those products are grown substantially in excess of the needs for human consumption, they will disrupt or wreck the feed program.

"I contend that that is a real fallacy, because if the wheat growers of Kansas were allowed to grow wheat on some of their acres, instead of planting milo and sorghum crops, they would grow from 15 to 25 bushels of wheat an acre, while at the same time, on the same ground, substituting sorghum grains, they would grow from 50 to 75 bushels to the acre, which would increase the feed tonnage.

"So I think the corn growers will see the advantage of such a plan. They are beginning to see it now. It will be the greatest thing which could happen to them. If 12 million acres were planted to wheat to be consumed in that way, the producers themselves would have a great advantage as compared to the present situation.

"Mr. CARLSON. The domestic parity plan for wheat, which was authorized in S. 3183 and S. 774 was a plan whereby wheat producers are assured of getting a return for wheat used for domestic food which is in line with other United States prices and costs while allowing all wheat produced to be sold competitively both in domestic and foreign markets.

"As compared with a continuation of the present program, it would maintain or increase wheat producers' incomes while reducing Government expenditures to negligible amounts. It also will permit eventual removal of acreage allotments, eliminate export subsidies, take the Government out of the wheat-export business, and permit all wheat to move through private-trade channels. I know of no other proposal which would accomplish all of these results."

True Status of Political Affairs in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. YARBOROUGH. Mr. President, since the large metropolitan daily papers in Texas which have printed so many untruths about me during the past 6 years have not ceased their attacks with my recent nomination, I call attention to a recent column in the Tulia (Tex.) Herald, by Mr. H. M. Baggarly, one of the outstanding editorial writers of America. Mr. Baggarly's editorials have placed first in State competition in Texas, and first in national competition as the best editorials appearing in weekly papers in Texas and America, for most particular years.

Mr. Baggarly, with his usual perception, has put his pen to the Texas political situation, and has accurately described it in his well known column the Country Editor.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column, the Country Editor, from the Tulia Herald of August 7, 1958 written by Mr. Baggarly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tulia (Tex.) Herald of August 7, 1958]

THE COUNTRY EDITOR

(By H. M. Baggarly)

Although the press was unsuccessful in defeating RALPH YARBOROUGH at the polls, it has not given up its fight. By taking his pronouncements out of context, by misplacing the emphasis on what he has to say, his enemies attempt to make him appear what he isn't.

Recent headlines make it appear that YARBOROUGH plans to go to the State Democratic Convention and raise a rough house, perhaps unbecoming to a United States Senator.

Here is his statement released when he arrived in Austin Saturday morning from Washington:

"I have proposed a free State Democratic Convention of freely selected Democrats. The governor has announced that he is the 'titular head of the Democratic Party in Texas,' and as such is entitled to control the State Democratic Convention. He has denounced me as vicious because I have said that Democrats should control their own convention.

"If it is truly a Democratic State Convention, it should be run by uncontrolled Democrats. If it is a Price Daniel convention, to be run for the benefit of him and his cronies, then he should control it. If it is a Democratic Party Convention, it shouldn't be in the vest pocket of any one man. We've had too much experience in Texas in recent years with conventions held in the palm of one man's hand.

"I do not call people vicious because they do not agree with me. Hundreds of thousands of people have disagreed with me on political questions in the past, but that does not make them vicious and deny them a voice in the Democratic Party. The Democratic Party is truly a national party, broad enough in its doctrine and faith to include people of all religions, all races, all conditions from rich to poor, and all shades of economic thought from liberalism to conservatism.

"It will be a tragic blow to the Democratic Party if its convention in the greatest State in the Union becomes a mere Cronies Club for any politician temporarily in office.

"A person who really believes in democracy won't try to turn its delegates representing 9 million people into mere puppets of his political machine. A lover of democracy would want to see freely elected delegates freely assembled to represent the people's will, not one politician's will.

"I believe in democracy as the best form of government yet instituted among men, and in the Democratic Party as the best voice of democracy in America. Whatever force makes that Democratic Party the tool or property of one man, weakens the forces of democracy in the whole and leaves all of us the poorer for its happening. The welfare of the people will best be served by a free convention and not by a controlled convention.

"I view the Democratic Party as the party of spirit, not the party of spite. To me, the Democratic Party is an organization with the love of humanity in its heart. There is no room in it for personal vengeance. It is too great to be controlled as the mouthpiece of any one man. The people will rise in their majesty to claim their own."

That is the spirit and attitude of Senator RALPH YARBOROUGH. Now compare his spirit with that of Gov. Price Daniel who has been billed by the daily press as one devoted to restoring harmony to the Democratic Party. Yet instead of promoting harmony, he never misses an opportunity to promote discord. For instance, Swisher County is predominantly Loyalist and in sympathy with the principles of the DOT. We Swisherites are not labor racketeers, we do not belong to the NAACP or to the AFL–CIO. We are not Latin American radicals.

Yet the Governor calls us all these names because we do not approve of his brand of democracy which contends that to be a good Democrat one must vote Republican and perhaps cross-file every now and then; because we adhere to the Jeffersonian philosophy that government should be by and for the people instead of the chosen few; because we believe in majority rule at all conventions.

Just yesterday Daniel said, "By the time it (the State convention) is over, they'll be crying, 'me no DOT'." It is easy to grasp the sneering contempt in that expression.

If Price Daniel was either honest or dedicated to party harmony, he would try to find a middle ground on which all of us could meet. He would recognize the fact that at least half the Democrats in Texas are what he calls splinters. When Price Daniel alleges that he wants or is working for harmony, he lies—and that is the only word Webster has that accurately describes his action. He is devoted to 1 cause—kicking everyone that isn't 1 of the original Shivercrats out of places of leadership in the Democratic Party if not out of the party.

If we are to judge RALPH YARBOROUGH and Price Daniel according to their announced purposes and ambitions, which is the moderate? Which seems to want party unity? Which is the big man?

Read their direct quotations in the daily newspapers, not the headlines written by the papers or the slants given by writers who speak in third person—then decide which one is vindictive and spiteful.

We daresay there will be many delegates to the State convention who may even be pledged to Price Daniel but who love harmony, unity and their fellow man sufficiently to demand that the convention be conducted according to the principles advocated by RALPH YARBOROUGH rather than those of Price Daniel and Jake Pickle.

The New Graduate School of Public and International Affairs of the University of Pittsburgh

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. CLARK. Mr. President, one of Pennsylvania's great and progressive institutions of higher learning, the University of Pittsburgh, is opening its newest graduate school this fall, the Grad-

uate School of Public and International Affairs. It is headed by Dean Donald C. Stone, who brings to the position an outstanding background of educational, administrative, and public service.

We of Pennsylvania expect this school to make a notable contribution to higher education in the field of public affairs and particularly to the interchange of ideas and experience between American and foreign administrators and students.

I ask unanimous consent to have printed in the Appendix of the RECORD, an article on the school entitled "A New Window on the World," from the magazine Pitt of the University of Pittsburgh in its 1957–58 winter issue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW WINDOW ON THE WORLD

This year, when the fall semester begins, the university will open another window on the world—a wide and exciting view through its newest graduate school, the Graduate School of Public and International Affairs.

In increasing numbers, visitors, teachers, and exchange students from abroad have brought to the university each year culture and knowledge from many lands. And the exchange of ideas and personal contacts between students and teachers has further enriched the traditional environment already established at the university, as symbolized in its nationality rooms. But in the past, for the most part, many of these activities have been on an individual basis, and restricted to classroom activities. Now, on the graduate level, this new school provides a new structure and permanent dimension directed into specific areas with definite aims.

AIMS AND OBJECTIVES

The objective of this new Graduate School of Public and International Affairs is to focus its research and teaching programs on the pressing worldwide administrative and public-affairs problems which face men and nations, preparing its graduates with the tools of leadership and knowledge to attack and successfully solve them. Only when public and community responsibilities on national and international levels are discharged effectively and democratically can the universal desire of mankind to live in peace be fulfilled.

Accordingly, the school will deal primarily with administrative affairs, whether governmental, community, or international. Programs will be concerned with the administration of change, with providing the leadership capable of improving society and advancing civilization.

This new graduate school will provide a center for professional education, research, and advisory services needed by all levels of government and many voluntary and international agencies in this era of rapid technological and social change. The school will present several unusual features:

It will provide an integrated approach to education in the affairs of local, State, National, and international organizations.

It will serve the leadership requirements of voluntary and community organizations at all levels.

It will engage in a balanced program of research, advisory, and consulting services, and formal and informal professional education in these interrelated fields.

It will provide an intercultural and international setting in which American and foreign administrators and students may share experiences and ideas and gain insight and perspective as they prepare for policy, operational, political, and research responsibilities.

It will stress the functions of leadership in the advancement of social ethics and responsible freedom.

The programs of the school are professional in character and planned at the graduate level. The method of teaching embraces both conceptual and empirical approaches to the problems of administration. A fundamental knowledge of the currently recognized theories and principles of administration plus an awareness of the need for their further testing and refinement are viewed as necessary background for the school's emphasis on administrative problem solving in program development and execution. Such an objective is made possible by a faculty which combines academic achievement with a wide and varied practical experience in both national and international administration.

The main fields of concentration are:

1. General public administration: Foundation work in administrative theory and science with special emphasis on program development and operational management, executive leadership and supervisory techniques of solving administrative problems, and human relations.

2. Municipal metropolitan administration: The social, economic, geographic, and political aspects of urban life and growth, administration of local public services, municipal organization and finance, intergovernmental relations, and personnel management.

3. Planning and urban development: A joint program, with the Carnegie Institute of Technology to provide training for potential city planners and urban development experts.

4. Community affairs administration: It is planned to offer two courses in 1958–59 in this new field which is concerned with the development of administrative leadership for community, civic, and other voluntary self-help organizations.

5. The administration of international affairs: While this curriculum is designed to develop a wide range of skills in handling international, intercultural, and indigenous economic and social development programs, it will also provide a solid grounding in major international problems and issues.

Especial emphasis is being given to cooperative arrangements between the graduate school of public and international affairs and other professional schools of the university, including business administration, education, engineering, law, public health, and social work, as well as the social science disciplines. The new school will have particularly close working relationships with the departments of economics, geography, history, political science, and sociology.

Another unique feature is the benefit the new school will derive from the university's administrative science center, a recently created research agency of behavioral scientists organized to do research in administrative processes as they occur in all types of large organizations. In addition, the Institute of Local Government, established in 1944, will be an integral part of the school.

Seminars, workshops, visiting speakers on international affairs, and the many international resources already available in the university will enrich the curriculum. Arrangements for study, research, and practical experience are flexible so that special programs may be provided to meet particular needs and interests of overseas students.

THE STUDY PROGRAM

For both young men and women and senior officials from abroad, the school offers a unique opportunity. In developing a curriculum, the aim has been to select courses and points of view which experience has shown to be of a maximum utility in dealing with specific situations and conditions found in many countries, especially those most often encountered in the newly independent and the less industrialized parts of the world.

The aim will be to enroll students, on both junior and senior levels, with the kind of personal qualities, leadership capabilities, and moral stamina which will enable them to carry broader responsibilities in important and significant fields of government, business, labor, education, and human relations.

The current academic year is being devoted to planning and development, recruitment of staff, special seminars and conferences, and initial advisory and research projects. A limited number of full-time students will be admitted to the degree programs in September, 1958.

Fellowships: A fellowship program has been established. Awards will be granted on the basis of ability and relative needs. Most students and officials from abroad who attend for short periods for degree purposes, however, will normally be financed under educational exchange programs of their own government, the United States Government, international agencies, or private foundations or associations.

Degrees: The program leading to a master's degree will require 1 to 2 years, depending on the previous education and experience of the candidate. Programs for doctoral work can be carried out jointly with certain other schools and departments of the university.

Especially designed nondegreee programs will often best serve particular interests of some students, however, and, for these, a certificate of study will be granted.

Direction: The school has been established by the board of trustees under the initiative and leadership of Chancellor Edward H. Litchfield, who himself has had a distinguished career in the fields of public and international affairs in government, higher education and business. The school is one of the professional schools under the coordination of Vice Chancellor Elvis J. Stahr.

The pioneering and experimental character of the school is matched by the diversity of experience of its first dean. Dean Donald C. Stone brings to the university varied administrative, research, consulting, and teaching experience dealing with all levels of government, public affairs, private education, and community service. He has served as Executive Director of the Public Administration Service, as Assistant Director of the Bureau of the Budget, Executive Officer of the President, Director of Administration of the Economic Cooperation Administration (now International Cooperation Administration), and, most recently, as president of Springfield College. He has participated in numerous international conferences and helped in the establishment of the United Nations and UNESCO.

The University of Pittsburgh, with its fresh and progressive approach in many fields of education and research, provides a natural setting for this professional school. For many years a need for this kind of training has existed in the Upper Ohio Valley region. With the shifting pattern of world events, trade, economics, and politics, graduates from this new school will find many areas of challenge and service, locally, nationally, and internationally.

In the next quarter of a century man seems destined to conquer space and reach the stars. The trip to the moon already is assured. But in contrast to his fantastic progress in the physical world, advancement in the social, economic, and spiritual worlds appear insignificant and these problems insurmountable. Yet, here is the area of man's greatest challenge. For in the solutions of today's complex cultural, economic, and political problems are the keys to freedom from fear and want, oppression, and war.

Fifty-ninth Annual Reunion, 10th Pennsylvania Volunteer Infantry Last Man Association

REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. MARTIN of Pennsylvania. Mr. President, the 10th Pennsylvania Volunteer Infantry Last Man Association met on August 2, 1958. The recorder-treasurer, Dan A. Dooley, has made a very fine report, which I think will be of great interest to the veterans of the Spanish-American War. I ask unanimous consent that the report be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

TENTH PENNSYLVANIA VOLUNTEER INFANTRY LAST MAN ASSOCIATION
LIGONIER, PA., *August 14, 1958.*

To the 113 Survivors of 10th Pennsylvania Volunteer Infantry:

The 59th annual reunion of the 10th Pennsylvania Volunteer Infantry Last Man Association was held Saturday, August 2, 1958, at Brentwood Post 1810, Veterans of Foreign Wars of the United States, located on Route 51, in the Brentwood section of Pittsburgh, Pa., with President John H. Turley (C), First Vice President William E. DeBolt (D), Second Vice President G. Fred Anderson (C), and Recorder-Treasurer Dan A. Dooley (I) in their respective places.

Of the 113 surviving members of the 10th Regiment, as of the reunion date, 33 members were present. Also in attendance were 42 guests, including the widows of Pvt. Frank P. Trainor, of Company C, and Pvt. James Hudson, of Company I.

Rollcall of deceased members—with members at attention, Recorder Dooley called the roll of the following 21 veterans whose deaths had been reported since our last reunion:

Company A: Sgt. Charles P. Keller, Pvt. George A. Rowe, Pvt. William T. Van Voorhis.

Company B: Corp. William M. Cleckner, Pvt. Theodore G. Bauman, Pvt. Harry Wilmet Miller.

Company C: Pvt. John R. Barnes, Pvt. William E. Little, Pvt. Frank W. Shanaberger.

Company D: No deaths reported.

Company E: Pvt. Walter J. Devlin, and Pvt. Joseph Dempsey Roadman.

Company H: Sgt. Samuel K. Weirich, Jr.; Corp. Eli H. Wherry; Pvt. William E. Reed.

Company I: Pvt. John D. Fenton, Pvt. Burt H. Leonard, Pvt. Alfred F. (Snap) Rugh.

Company K: Pvt. Joseph K. Bush, Pvt. John H. Chambers, Pvt. Charles William Pfinder, Pvt. Charles B. Wood.

Taps was sounded in their honor.

Hon. William Rahauser, judge of the orphans' court of Allegheny County, delivered the address of welcome on behalf of the city of Pittsburgh, which was very much appreciated by members of the 10th Regiment.

Report of the historian: Recorder Dooley reported: That a card signed by Joseph D. Roadman (E), dated August 20, 1947, gave his address as Redondo Beach, Calif., and the date of birth as August 13, 1877; that information received between 1954 and 1958 showed that both Joe Roadman and his wife had died in a sanitarium, and was buried, under the name of Joseph D. Rodman; that the records in the police department at Pasadena, Calif., where Joe worked as a motorcycle officer for more than 20 years before he retired, shows over his fingerprints on the application blank the name of Joseph Dempsey Rodman.

That through correspondence it was learned that M. C. Lilley & Co., manufacturers of the sabre engraved, "To Colonel A. L. Hawkins from citizens of Greensburg, Pa., and members of Co. 'I', 10th Regiment, National Guard Pennsylvania" was absorbed by Bill Kay, Inc., Columbus, Ohio, who does not have the old Lilley records and was unable to contact any of the old employees.

That no information has been received concerning the 10th Regiment bass drum, which disappeared in Washington, Pa., and a letter from Mrs. Charles H. Delaney states that the drum used by her husband, of Company H, is in the museum, in Harrisburg.

That the contents of our July 15, 1958 roster was placed in the Monday, July 28, 1958, issue of the CONGRESSIONAL RECORD by Senator EDWARD MARTIN, of Company K.

That of the 258 rosters mailed to widows or next of kin of our deceased members, 15 have been returned, several of them marked "deceased."

Reports from companies: According to the registration cards, the following members were present: Company A (3), Frank E. Yohe, R. Dale Jolliffe and Joseph Phillips; Company B (2), William A. Ketterer and William E. Smith; Company C (6), Charles O. Collins, John H. Turley, G. Fred Anderson, Homer J. Daugherty, Abraham De Gardeyn, Jr., and Leroy Underwood; Company D (6) George E. Mills, James H. Cope, Richard T. Cunningham, William E. DeBolt, Charles J. Rosenecker and Harry C. Wilson; Company E (4), James McShane, Harry R. Hummer, Harry M. Kinkead and Bert Mason; Company H (3), Harry E. Cope, Edward M. Power, Jr., and Thomas M. Reese; Company I (3), Judge Richard D. Laird, Daniel A. Dooley and Kennett W. Saam, and Company K (6), Samuel L. John, Albert Cathers, Benjamin F. Hamilton, Lowye Keys, Joseph W. McCullough and Donald C. Scott. Total, 33.

Remarks by guests or members: President Turley called on Judge Richard D. Laird, of Company I, who said in his remarks that because of pressing official business he had been unable to attend recent reunions and that in the future he hoped to be a regular at our reunions. Other speakers were R. Dale Jolliffe for Company A, President Turley for Company C, Harry C. Wilson for Company D, Bert Mason for Company E, Harry E. Cope for Company H, and F. G. G. Conley, son of the late Rollo J. Conley, of Company D.

Reading of communications: The following telegram was read: "R. Dale Jolliffe, 316 Bracken Avenue, Pittsburgh. Wish you would extend to my comrades my sincere regrets in not being with them at the 59th reunion. My work here is so piled up I cannot get away. That God may grant you all health and happiness is my prayer. EDWARD MARTIN, United States Senator for Pennsylvania."

The following letter, addressed to the recorder, was also read: "My colleague and good personal friend, Senator EDWARD MARTIN, has informed me that the 10th Pennsylvania Infantry United States Volunteers of the Spanish-American War, is holding its 59th annual reunion on August 2, 1958, in Pittsburgh.

"As one who has long been aware of the services performed by the volunteers in the Spanish-American War, I would like to convey my heartiest congratulations and best wishes to the only unit in the United States that has continually held an annual reunion since the war in which the volunteers served.

"Again, good wishes to the 10th Pennsylvania Volunteer Infantry, and with my best wishes for a very successful reunion, I am cordially yours, KARL E. MUNDT, United States Senator." A thank you letter was mailed to Senator MUNDT.

Unfinished business—Relics Committee: A letter has been received from Miss Julia Bierer, daughter of Maj. Everhart Bierer, stating that the Spanish canon presented years ago by her father to Fayette County (now gathering dust in the basement of the courthouse at Uniontown), and other relics in her possession and in the family of Capt. Dan Bierer, will be turned over to the 10th Regiment when and if the association decides on a place to keep them.

A motion was made at the meeting to place the baseball trophy in the Baseball Hall of Fame, at Cooperstown, N. Y. It was defeated.

Good and welfare: A motion was made by Thomas M. Reese of Company H, that a standing vote of thanks be tendered Senator EDWARD MARTIN and Recorder Dan A. Dooley for the work they have done for the 10th Regiment.

Election of officers: The following officers were elected for the ensuing year: President, Harry R. Hummer, Company E, Latrobe, Pa.; first vice president, Bert Mason, Company E, Mount Pleasant, Pa.; second vice president, Thomas M. Reese, Company H, Cannonsburg, Pa., and recorder-treasurer, Dan A. Dooley, Company I, Ligonier, Pa.

Korean Decade

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. HUMPHREY. Mr. President, the Republic of Korea celebrated its 10th bitrhday this past week. An interesting editorial appeared in the New York Times entitled "Korean Decade."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KOREAN DECADE

It was 10 years ago today that the free and independent Republic of Korea was proclaimed. They have been turbulent years in which disaster was narrowly averted. They have also been fruitful years in which the Korean people have shown their great courage, resilience and imagination.

This free government was instituted by the consent of the governed as expressed in an election that was sponsored and observed by the United Nations. It was necessarily the government of only a part of the peninsula, since the Communists would not permit either a free election or United Nations observation. Freedom could survive in only part of the troubled land. Its survival has seemed almost miraculous.

This part of the country was obliged to fight off a vicious onslaught from the Communist North, to accommodate literally millions of refugees who fled the Red terror and to undertake a gigantic rebuilding under conditions that would have tried the stoutest of hearts.

Fortunately, the United Nations was able to discharge some of the responsibilities that it had assumed. It was able to come to the defense of the free Koreans militarily. It has been able to give assistance, since the invader was halted, in this program of rebuilding. The United States may well be proud of its leading part in these operations.

The total obligation, however, has not yet been met. The United Nations has recognized the government in Seoul as the only lawful government among the Koreans. It is pledged to work for the unification of the peninsula under a free government. The case of Korea is still upon the agenda of the United Nations. It must be still upon the conscience of the world. The free Koreans have shown themselves worthy of our admiration. They deserve more than that. They can honorably claim our continued support.

Solar Radiation—Wisconsin "Sunshine" Satellite No. 4 in Vanguard Series

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. WILEY. Mr. President, I have been pelased, from time to time, to invite attention to the splendid contributions made by our scientists and technologists at the University of Wisconsin to our national science program.

Today, I would like to make special comments on a current project, the development of a "sunshine satellite"—scheduled to be number 4 in the Vanguard series. The satellite is designed to provide important data on the radiation of the sun. For example, we need more answers to such questions as: How much heat comes to the earth from the sun? How much heat is reflected by clouds, snow, and water and radiate into space by the earth? How is sunshine, or lack of it, related to general weather conditions? To help answer these, and other questions, the information radioed back to earth from the orbiting satellite is expected to be extremely valuable.

The project is being developed by a team of scientists, headed by Dr. Verner Suomi, meteorologist. Other members of the team include: Prof. Robert J. Parent, Prof. Wayne Swift, Harry Miller, Peter Schoffer, Charles R. Stearns, E. J. Romare, William Hauser, and Andrew Grondahl.

Yesterday's New York Times carried a fine article on this splendid project.

I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUNSHINE STUDIES BY SATELLITE SET—VANGUARD IS MADE READY TO MEASURE RADIATION IN WEATHER STUDIES

MADISON, WIS., August 16.—Where does all the sunshine go?

The answer could bring much more accurate weather forecasts, and perhaps one day help produce control over weather.

To get the answer, a team of scientists headed by Dr. Verner Suomi, University of Wisconsin meteorologist, is putting finishing touches to a Vanguard satellite that could solve the problem. It probably will be launched late this year.

Sunshine brings tremendous amounts of heat to the earth every day.

Obviously, the earth doesn't keep all this heat. If it did, life would be impossible on this planet. The earth gets rid of as much heat as it collects.

"Over a year or 10 years, the radiation exchange balances out," Dr. Suomi explains. "But we don't know what happens month by month, or whether there are significant effects on the weather if for a week we get more or less heat than the earth surrenders to space.

EFFECT OF CLOUDS A FACTOR

"Clouds and snow reflect a good deal of heat directly back to space. What happens to weather if the United States is covered with lots of cloud for a week or so?

"Suppose the oceans get more sunshine than usual, for lack of clouds. You would think there would be more evaporation and so more rain would have to fall somewhere. Or do the oceans, perhaps, store heat in such a way that short-term changes in incoming radiation don't make any real difference? We'd like to know."

To help resolve such questions, the sunshine satellite will measure the heat coming to the earth from the sun; the heat reflected by clouds, snow, and water and radiated into space by the earth and its air.

These measurements can be correlated with weather events on earth.

Making 90-minute trips around the world, the satellite will report radiation measurements over land and sea, by day and by night. It will provide knowledge not obtainable in any other way.

HEAT FLOWS TO POLES

The tropics collect more heat than they surrender. The polar regions surrender more than they receive from the sun. Heat moves from the equator toward the poles to be dissipated. These heat migrations are the basic mechanism of our weather.

Dr. Suomi and a team of enthusiastic assistants have the sunshine satellite about set to go.

It carries four little sensors—metal balls suspended at the tips of long antennas. The sensors measure temperatures, which in turn depend upon the amount of radiation.

Two of the sensors are about the size of table tennis balls, painted black and white. Two others are much smaller, and protected by metal blinders. The blinders can shade the sensors at times from direct rays of the sun, which cast a sharp shadow, but still allow them to measure radiation coming back from the earth.

The sensors are so designed that they separately can measure the sun's incoming radiation, reflected radiation, and heat surrendered by the earth.

Thermistors, tiny electrical thermometers, record the temperatures in the sensors. This message is transmitted along wires through the antenna and recorded as signals on a 1-pound tape recorder.

The tape recorder gets readings every 30 seconds, which means about every 150 miles of the satellite's journey. When the satellite passes over a recording station, it will be commanded by radio to broadcast its findings. The data from one roundtrip are broadcast to earth in 10 seconds, then the recorder starts storing new data.

If powered by a solar battery, the satellite should be able to talk to earth for about a year, Dr. Suomi said.

TO COUNT LIGHTNING FLASHES

Its findings are expressed in mathematical equations, and it will report 230,000 equations in about 100 days. These will be processed in a computing machine.

The satellite will also record hits by micrometeorites and try to count lightning flashes on earth. It will be tuned to record certain bursts of radio noises created by lightning flashes.

The team building the equipment for this satellite includes Prof. Robert J. Parent, Prof. Wayne Swift, Harry Miller, Peter Schoffer, Charles R. Stearns, E. J. Romare, William Hauser and Andrew Grondahl.

The Wisconsin satellite will be No. 4 in the Vanguard series, and is scheduled to be launched within the International Geophysical Year, which ends December 31.

United States Geographic Center in South Dakota

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. CASE of South Dakota. Mr. President, South Dakota is understandably gratified that the admission of Alaska to the union of States will shift the Nation's geographic center to our State. It is just another example that, sooner, or later, all good things gravitate to South Dakota.

Should Hawaii become the 50th State, the geographic center of the Nation as a whole will shift only 9 miles, and will still remain in South Dakota, according to the Coast and Geodetic Survey.

The new geographic center will be located near Castle Rock, S. Dak., in Butte County, in the westernmost part of the State. Castle Rock consists of one store, and the population is not very large. But all the residents are unanimous in their gratification over this new recognition.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. AIKEN. I do not blame the Senator from South Dakota for being proud that the new center of the United States will be in his State. But I want him to understand that the center of the world is my home town.

Mr. CASE of South Dakota. I would not know about that. I suppose it depends on where one begins his calculation when he wants to locate the center of the earth.

Mr. AIKEN. Any map will prove it.

Mr. CASE of South Dakota. The statement of the United States Coast and Geodetic Survey is the authority for the statement I have made today.

Mr. President, recently the Rapid City, S. Dak., Daily Journal published an article by Mr. Ed Niciejewski describing the whereabouts of the new center and the impact which this news has had upon the small community of Castle Rock.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CASTLE ROCK NOT "UPPITY" OVER BEING CENTER OF UNITED STATES

(By Ed Niciejewski, Journal staff writer)

CASTLE ROCK.—A road and a map are uppermost in the minds of residents in this community nearest the Nation's new geographic center.

A sweep of a mapmaker's divider puts Castle Rock near the Nation's balance point when Alaska is admitted into the Union. All nine permanent residents of Castle Rock hope the distinction will put them on South Dakota's map for all time.

"Here's Mason up the road without even a postoffice and they're always on the map. We've had a post office since 1910 and we're on some maps but not on others," declared Mrs. Francis Jacobsen.

POPULATION

The Francis Jacobsens account for most of Castle Rock's population. Included in the family are Mr. and Mrs. Jacobsen; their 3 children, Patricia, 17; Merle, 13, and Harlan, 11; Jacobsen's mother, Mrs. Mabel Jacobsen, and their ranch hand, Herman Pargas.

Rounding out the census are Mr. and Mrs. Elmer Eichler, who run a combination general store, post office, and filling station. Not counted on the impromptu census are Mr. and Mrs. Wortham Marten, Chattanooga, Okla., and their children Linda, 13 and Janet, 11. The Martens are in Castle Rock only during the summer harvest season.

As attention of the Nation swings to Castle Rock, its residents were amused and detached.

"If they put a monument up here, then maybe they'll build a road to it," declared Mrs. Francis Jacobsen, waving a hand generally at State Highway 79 which constitutes Main Street.

From the Belle Fourche River to the south, State 79 shoots straight across plains to the north, a seemingly endless ribbon of white and dustry gravel.

Impact of tourists and the curious coming to Castle Rock as result of the new designation didn't particularly worry anyone.

"What would they come up for? There's nothing to see here and this is too far away from everything," one resident opined.

Pargas offered an impromptu thought on the cartographer's computations. "It's better to be in the middle of the United States than to be on the outside of it," he said.

UNCONCERNED

Eichler reflected the hamlet's general unconcern. "I haven't thought about this," he said, "but it will be good for Butte County. It will be good for the county and it will be good for South Dakota. I don't know why, but it will be."

Mrs. Mabel Jacobsen admitted surprise at the information but, like others, wasn't particularly concerned. In her 70's, Mrs. Jacobsen came to Castle Rock in 1910 and served as postmaster for 34 years before retiring in 1948. She and her husband were the immediate area's second settlers.

Comment from the mayor was not available—Castle Rock doesn't have one. A query for this official prompted 13-year-old Merle to ask: "Mom, who's the big shot here?" His brother Harlan commented: "We're all mayors here." The boys felt 3 cats and 2 dogs should be included in the census.

If the action in distant Washington should bring civilization to Castle Rock it would be a shame in some ways.

NO PROBLEMS

The village has no juvenile delinquency problems; recession and crime are merely words in newspapers. Its residents are forthright and friendly with true western hospitality. Spend an hour with them and you'll think you have known them all your life.

Because the law requires it, Henry Jacobsen, a nearby rancher, was elected justice of the peace, and Henry Carlson, another rancher, was designated constable.

"They really don't do anything because there is nothing for them to do, but the law says we have to have the offices," explained Mrs. Francis Jacobsen, who is town clerk. Nearly everyone in town holds some office or other.

Two Top Peak, clearly visible from Castle Rock's only east and west street, may be near the Nation's actual new center. Only 11 miles away by air, it may as well be 10 times that distance so far as accessibility is concerned.

To reach Two Top Peak from Castle Rock a tourist would have to start several miles north of town and proceed west. Winding around buttes and through draws, the graded road gradually peters out to twin ruts, separated by an island of grass. A rain turns the ruts into quagmires.

FEW PEOPLE

Scattered on the hillsides are rocks as large as homes and aside from curious cows and wildlife the rough country is nearly devoid of life. Adjacent to the peak are several ranches owned by the Kinghorn brothers.

Last week a pilot from Weber Aviation in Rapid City and I planted a sign near the Nation's geographic center the easy way—by flying there.

Twenty-five minutes after taking off from Rapid City, pilot Jerry McDow brought the airplane in for a neat landing on the prairie near Castle Rock. Another hop of 10 minutes brought the craft to another landing near Two Top Peak.

Feeling very much like explorers, we erected a small rock cairn and planted a sign: "New Geographic Center of the U. S. A. Population 0."

A mile away a herd of cattle, unimpressed with the intrusion, foraged among prickly pear for food. The sun beat down and a brisk wind made anchoring the sign difficult.

French explorer and adventurer Verendrye may have trod this spot over 200 years ago.

Gen. George A. Custer's or General Crook's troops may have engaged hostile Sioux or hunted buffalo in this very same pasture in the 1870's.

But at this particular historic moment when we planted the sign, nobody could have cared less.

America Disturbed by Communist Trend in Latin America

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 18, 1958

Mr. WILEY. Mr. President, on many occasions I have brought to the attention of my colleagues the serious problem of increasing Communist penetration of Latin America.

Looking backward, I recall the grim, alarming days of the unlamented regime of Colonel Arbenz in Guatemala. At that time, Communists completely dominated the government. I believe I was one of the first, if not the very first, Member of the Senate to expose the Communist beachhead in that land.

Fortunately, the Communist regime was ousted in Guatemala, thanks largely to the heroism of the late Col. Castillo Armas. But, following his tragic assassination, there have been disturbing indications of Communist efforts at a comeback there, despite the anti-Communist position of the present government.

Communism looms now as a problem in other lands, as well: in the Caribbean, in Central and in South America.

THREE CONTRIBUTING FACTORS TO COMMUNISM'S GROWTH

Why? For three reasons, I believe:

First. Often, because of conditions which breed communism, which arouse discontent and demand for a change.

Second. Invariably, because communism puts on a false but attractive face. Under the tricky Khrushchev, the Kremlin plays down dictatorial Marxism and plays up so-called socialist democracy, friendship, and aid.

Third. Because whether or not local conditions are good or bad, and whether or not Khrushchev or a Stalinist is in the saddle, the fact is that Communist agents are all over Latin America, working for revolution. These agents are skilled, unscrupulous conspirators, as are the Red agents in the Middle East.

For these and other reasons, we see the paradox of Red signs in many areas of the devout continent.

KHRUSHCHEV MAKING HAY WITH "SOFT-SELL"

Meanwhile, particular success has been achieved by Khrushchev's "soft-sell." His line of soft-pedaling communism, while dangling all sorts of economic offers—trade, loans and assistance—has unfortunately paid off, so far as increasing Soviet ties with Latin America are concerned.

By all reports, the Communists have been making considerable headway recently in Venezuela. In that oil-rich, iron-ore rich land, Reds are infiltrating trade unions, student organizations and other groups and are taking other steps to try to become the balance of power there.

ANTI-COMMUNISTS SPEAK UP AS WELL

Across my desk there come many indications of Communist and fellow-traveller activities there and elsewhere, as well. Fortunately, there come indications, too, of strong anti-Communist voices—inside and outside governments.

I have in my hand, for example, the text of an editorial in the August 5, 1958, issue of the Habana Post entitled "Communism in Latin America," which was prepared, I understand, by Mr. Edward Scott.

I understand that the Habana Post was itself attacked the preceding Saturday, and that hundreds of pamphlets denouncing so-called Yankee imperialism were left there, and on the street after the assault.

The pamphlets asserted that—

Imperialism, with its aggression against the Middle East, seeks to unleash nuclear war against the Soviet Union and all the peoples of the world.

The pamphlets concluded:

Down with aggressive warmongering imperialism. Long live the Soviet Union, defender of peace and liberty.

According to reports, two banners were also left saying, "Yankee troops get out of Yateras"—the waterworks supplying the United States Naval Base at Guantanamo Bay.

I send to the desk the Habana Post editorial, preceded by an Associated Press dispatch of August 3 from Caracas,

written by Larry Allen, entitled "Reds Widen Their Grip in Venezuela."

I have not personally been to either of these countries, so I would not attempt to speak in detail as regards the problem of communism there. But I cite these two newspaper reports as evidences of an all-too-prevalent problem throughout an area which we would like to be the very symbol of good-neighbor relations. We hope that all the lands of the Caribbean and of the rest of Latin America will always be our friends and allies. We of the Senate Foreign Relations Committeee through our subcommittee study and through our regular review intend to give this problem our continuing attention.

I ask unanimous consent that both newspaper items be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

REDS WIDEN THEIR GRIP IN VENEZUELA

(By Larry Allen)

CARACAS, August 3.—With incredible speed the Communists have moved into positions in Venezuela where they often dictate the acts of the junta that overthrew a dictatorship last January.

Their organization is closeknit, speedy, and precise. Unless their tactics are halted soon, Venezuelans may awaken one day and find control of the oil-rich nation in Red hands.

The Communists are respected. They have equality with all other political parties. They are consulted by the Government.

There are Communist Party members in all the key trade unions, in businesses and industries, in civic and student organizations, and in the offices of government.

The Communist Party is small. But its agitators are descending upon cities, towns, and villages in every strategic sector of Venezuela, enlisting party members. They incite and enforce strikes.

Communist membership might reach 100,000 by the end of the year. At the moment, the party rolls show 26,000 to 30,000.

Apparently because the number sounds small, the provisional government, headed by Rear Adm. Wolfgang Larrazabal, waves aside any suggestion the Communists constitute a threat to Venezuela's "new democracy."

Larrazabal said recently Venezuela's Communists were patriotic and nationalistic, and not the byproduct of Moscow's international communism.

As he spoke, two kingpins of the Venezuelan party were in Moscow, presumably getting their orders.

In Larrazabal's view, the Communists helped to overthrow the 10-year-long military dictatorship of Gen. Marcos Perez Jimenez last January 23 and therefore are democratic.

But outside of Larrazabal's governing five-member military-civilian junta, there is rising alarm over the Red riptide, particularly within the army.

That might crystallize into action, long before national elections expected in November. There are deep rumblings of discontent among some top army officers and talk the Communists must be stopped.

This already has exploded into one abortive coup.

Gen. Jesus Maria Castro Leon, defense minister in the junta, led a conspiracy July 23 aimed at toppling the government. One of his chief aims was an immediate crackdown on the Reds.

But the Communists and their sympathizers got wind of the conspiracy.

They immediately mustered more than 100,000 Venezuelans. They chanted for Castro Leon's death and the eradication of all conspirators. Castro Leon was forced out and exiled to a job in Washington.

The average man fears to say anything critical or to suggest any action against the Communists. It means attack from most of Venezuela's newspapers.

Even the Roman Catholic Church, often the spearhead against communism, is highly cautious in Venezuela. Only occasionally is there the mildest reference to Venezuelan Communists in the church's organ, La Religion.

It is a great change from 7 months ago when the Communists were outlawed, hunted and generally ignored by the Venezuelan people.

[From the Habana Post of August 5, 1958]

COMMUNISM IN LATIN AMERICA

An Associated Press dispatch out of Washington, D. C., published in the Courier yesterday stated that officials in Washington were surprised and mystified by the meeting between Soviet Premier Nikita Khrushchev and Mao Tze Tung, chief of the Chinese Communist Party in Peiping on July 31.

We fail to see why there should be any mystification. With the world in a state of crisis, what is more natural than that Khrushchev, master of 193 million people should discuss events with Mao, who holds in his hand the destinies of 602 million Chinese.

Nor can we see any reason for surprise in the notice served on the Western World by Khrushchev and Mao that they intend to intervene in the internal affairs of the countries of Latin America. Their statement said that the two Communist leaders would give their firm support to the national independence movements of the peoples of Asia, Africa, and Latin America.

When questioned with respect to the Communist statement, John Foster Dulles, United States Secretary of State, said that he was struck by the fact that the Russian and Chinese Communists were about to undertake a movement of independence and liberation in Latin America. "I thought that if they wanted to spread independence, they could start nearer home," Mr. Dulles added.

The United States Secretary of State's irony probably did not perturb Khrushchev and Mao. They have murdered literally millions of people for merely thinking of freedom and independence. If the Communists ever were to gain control of a Latin American country by liberating it from whatever the Communists believe it should be liberated from, that country would then assume the status of a Hungary, as vassal of the Soviet Union.

Furthermore, it would be exposed to the same type of repression as was inflicted on the Hungarians, 40,000 of whom were murdered by Khrushchev's assassins because they wanted to be independent of Soviet rule.

There is a tendency to believe that no Latin American country could be subjugated by the Communists in the same way as Hungary has been enslaved by Moscow. The plain reality is that without the armed aid of the United States, no country in Latin America, including Brazil, could withstand a full scale assault by the Communists, an assault which would come after the state in question had been sown with fifth columns and nests of traitors.

That men would be prepared to die to defend their country is beyond question. But it is not enough to die. The simple act of dying would not defeat the Russian invaders.

Another fallacy is that Russia is too far away from Latin America for it to be an effective conqueror. Modern methods of transportation by air and by sea have annihilated distance and now there is no possibility of defense by geography.

All that stands between any individual state upon which Communist Russia might have designs, and Moscow, is the United States of America, without whose military power the target country would be next to defenseless.

Back in 1936, the Republic of Panama insisted on excluding from its amended treaty with the United States the provision whereby the independence of Panama was guaranteed by the United States. Those who sought this revision said that the guaranteeing of Panama's independence by the United States was an offence to Panama's sovereignty.

When Panama seceded from Colombia in 1903, the United States Navy prevented the Colombians from landing troops in Panama to quell the revolt. That is how the United States first "guaranteed" Panama's independence.

Supposing that the Republic of Colombia now were to demand "anschluss" with Panama. Is there any one naive enough to believe that Colombia could not take Panama in a matter of days? And is anyone naive enough to believe that some nationalistic Colombians have not thought many times about such a possibility?

What is it that prevents them from taking action? Certainly it is not any fear of the Panamanian police force. No, it is the United States of America which is the deterrent—in the same way as it is the United States of America which, without boasting about it or making statements, which would offend the dignity of the Latin America peoples, serves as the bulwark against military aggression by Soviet Russia against any country south of the border.

Now the Russians are lining up with the Chinese to "liberate" certain Latin American States. It should be noted that there are hundreds of thousands of Chinese in all Latin American States and undoubtedly Mao will hope to find among them agents for their new policy of penetration. Most of those Chinese have families in Red China through whom pressure could be brought to bear on those unwilling to collaborate.

This statement by Khrushchev and Mao should not be taken lightly. They obviously intend to intervene directly in the internal affairs of Latin American countries and now is the time for consultations to be had for the purpose of determining what common steps should be taken to meet this new menace to the democratic way of life.

Spotlight on Steel Profits

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 18, 1958

Mr. HUMPHREY. Mr. President, there is a running argument about the increase in the price of steel and the reasons given for the increase by industry.

Recently there appeared in the publication of the International Association of Machinists—The Machinist—in the August 21, 1958 issue, an article entitled "Spotlight on Steel Profits." This particular article states that the cost of steel production is up $2.38 per ton while the price went up $4.50 per ton. The article also notes the impact of the increase of steel prices on the cost of living.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPOTLIGHT ON STEEL PROFITS: COST UP $2.38, PRICE UP $4.50

The United States steel industry, which raises prices each year and tries to shift the blame to organized labor, is in the spotlight this week.

In the wake of the industry's average $4.50-a-ton price—pushing the price of steel to an all-time high of $150 a ton:

The United Steelworkers revealed that the $4.50 price boost is nearly twice as much as the actual increase in labor costs.

The Justice Department announced that it may call a grand jury to investigate whether the steel companies violated the law despite their denial of a price-fixing agreement.

The United States Senate Antitrust and Monopoly Subcommittee, headed by Senator ESTES KEFAUVER, of Tennessee, indicated it would conduct further hearings to look into steel industry prices and profits.

David J. McDonald, president of the steelworkers, explained that the wage increases of 14.9 cents an hour received by union members recently were in line with the long-range growth of productivity in the steel industry, and thus could have been absorbed by the companies without price increases.

Labor economists pointed out further that the higher steel prices far outstripped the wage raises even without considering the productivity increases. It takes 15 man-hours to produce a ton of steel, they explained. On that basis, the total wage package amounted to $2.38 per ton. Yet, the steel companies increase prices by nearly twice that much.

The current issue of Steel Labor also reports that even though the industry has been operating at only slightly more than 50 percent of capacity during the first quarter of the year, the industry "as a whole was able to roll up a fairly hefty rate of return on net worth of 5.7 percent."

"This is a remarkable achievement," the newspaper points out, "never before equaled in the history of the basic steel industry."

United States Senator HUBERT HUMPHREY of Minnesota also scoffed at the steel companies' claims that the price increase was required by higher labor costs.

"Between 1953 and 1957," he explained, "total annual salaries and wages in the steel industry rose by 15 percent. But during the same period, U. S. Steel's net profits rose from $222 million to $419 million—an increase of 89 percent."

Senator HUMPHREY said that it is difficult to see how such corporations as United States Steel are being squeezed on profits when United States Steel's net profits per ton of steel have gone up from $8.85 a ton in 1953 to $17.91 per ton in 1957.

WHAT INCREASE MEANS TO MANUFACTURE

The $4.50-a-ton increase in steel prices will increase costs in metalworking industries, but not nearly as much as many people think. The magazine U. S. News & World Report figured out last week just what the increase in steel prices add to the most of materials in various products. Here are the facts:

Product:	*Increase in costs*
House	$10.94
Automobile	8.10
Refrigerator	.54
Electric stove	.55
Steel desk	.56
Steel cabinet	.45
Washing machine	.30
Table-model TV	.07

Prize-Winning Essay on Highway Safety

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. CASE of South Dakota. Mr. President, the National Grange annually sponsors a national highway safety contest. The winning essay in South Dakota was written by a high school senior, Robert Hartshorn, of Buffalo Gap, Custer County—my home county—S. Dak. The subject of the prevention of highway accidents is of interest to everyone these days. Therefore, I ask that Mr. Hartshorn's essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

COMMUNITY ORGANIZATION FOR HIGHWAY SAFETY

(By Bobby Hartshorn, State winner in Grange safety contest)

Let us take a few minutes to consider this title, Community Organization for Highway Safety. Highway accidents have reached an appalling alltime high so far this year in our State. At the time of this writing, South Dakota has had 63 highway fatalities compared with 48 at this time a year ago. It is true, the overall picture throughout the Nation is a trifle better than 1 year ago. For the past 3 months, there has been a slight decrease in traffic deaths in the United States; but since there is still room for a great deal of improvement, we should strive to do something about this shameful, needless loss of life. Now, if you were to tell people these were really not accidents, they would probably disagree with you and say that they certainly were not planned; and so they were accidents. But, let us stop and think for a minute. Better than 90 percent of those accidents could have been prevented, so were they really accidents after all?

Now, we all consider our communities, our home neighborhood, a place we are proud of. Our neighbors and friends live there. We miss it when away, and have a feeling of belonging when we return. We would not for the world intentionally hurt or kill one of these people, but we might if we do no more than talk about highway safety. It is our responsibility, and we must do something about it.

Last year our Grange sponsored a motor vehicle checkup in cooperation with the State motor patrol. All vehicles passing through town that afternoon were checked. This seems like a small thing but it was a beginning and worth while in that a few were required to make necessary repairs.

Another thing we are considering is keeping an accurate record of all miles driven in any type motor vehicle by each member of our Grange, and then totaling up the number of accident-free miles that have been driven. I am sure this could easily be extended to include entire communities, not just Granges.

The South Dakota Automobile Dealers Association is currently sponsoring a worthwhile project. Anyone having 2,000 miles (his latest) of accident-free miles may sign up for a chance of winning free prizes, some more valuable than others, but the basic idea is very good.

I feel that driver training courses should be made compulsory in every high school. Practice makes us better at anything we do; and surely it is highly important that we practice driving the right way, without developing wrong habits even more strongly than they are now. Driver training courses are doing just that; teaching people the right way to drive. If communities will begin making organized requests, driver training courses can be made compulsory.

Communities might sponsor a revision in our existing driver's permit law. Surely it is more important that we know something about driving than that we are able to pay for a permit. Why not make it necessary to pass some sort of test, also?

Liability insurance is now required, but there are still those who do not have it. After an accident occurs, it is too late to get the insurance. Wouldn't it be much better to require proof of liability insurance at the time automobile licenses are purchased? If such changes are to be made in our existing laws, it is up to the people to do it; and surely the best way is through community organization.

Many of the films on highway saftey shown in schools, 4–H camps, and so on could well be shown at many public gatherings. It is good for drivers and passengers of all ages to be reminded as well as taught—once in a while.

I believe that the real problem in community organization for highway safety is up to each one of us. Of course you want your community safer. Then why not get busy with some of the ideas I have mentioned? Once you get started you will think of more, probably better than the ones I have mentioned, too. So get busy on this problem now. I challenge you.

Solid Achievements of Congress

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, August 18, 1958

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Congress of Solid Achievements," published in the Washington Sunday Star of August 17, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CONGRESS OF SOLID ACHIEVEMENTS

Congress was in a waspish mood. It was hot, the big job was over and the tedious, end-of-session haggling over last-minute, controversial legislation was wearing patience thin.

Time and again last week the legislative processes on Capitol Hill were interrupted by shouting and argument.

One of the worst fights broke out Thursday night on the Senate floor. Senator CAPEHART, Republican of Indiana, took exception to a speech Senator KENNEDY, Democrat of Massachusetts, made earlier in the day warning the United States was losing the nuclear arms race with Russia.

Senator CAPEHART peevishly asked why Mr. KENNEDY had to "tell the world * * * (and) our enemies." The bitter argument and unsuccessful effort to clear the gallery while the Senators discussed America's military shortcomings postponed a scheduled vote on a $3.6 billion supplemental appropriations bill.

But the 85th Congress aware of its already established reputation as one of the best legislative bodies ever to occupy Capitol Hill and kept in line by able leadership stayed on the job.

THE WEEK'S SCENE

Important legislation which occupied Congress in its homestretch drive last week or still on the calendar included:

Farm bill: The House, after turning a cold shoulder to Secretary of Agriculture Benson's recommendations, reconsidered and approved a measure which would lower price supports on basic crops while maintaining cotton and rice acreage allotments. The Senate didn't like some of the changes the House had made in its bill and indicated full congressional approval would require further conference compromises.

Tax reduction: Senate approval completed congressional action on two tax revision bills. One measure sent to President Eisenhower reduces excise taxes by $42 million annually, exempting from the 10 percent amusement tax all admissions under $1. It also repeals the 20 percent tax on club dues and initiation fees for membership to community swimming pools and skating rinks. The second bill provides $260 million in annual tax relief for small business.

Social security: The Senate turned down a proposed 10 percent increase in old-age benefits and approved the House version calling for a 7 percent increase.

Depressed areas: The House approved in modified form a Senate bill extending $275 million in aid to economically depressed areas. Prospects for a conference compromise appear good.

Reciprocal trade: The Senate approved a 4-year extension of the Reciprocal Trade Act, regarded as a great personal triumph for President Eisenhower.

New air agency: Acting to insure greater safety in the air, the two Houses agreed to a conference report establishing a new Federal aviation agency. The new agency will combine the functions of the Civil Aeronautics Administration, the Airways Modernization Board and assume some authority of the Civil Aeronautics Board.

National debt limit: The Senate Finance Committee approved and sent to the full Senate a measure increasing the permanent national debt ceiling from $275 billion to $283 billion and providing for a temporary ceiling of $288 billion.

Labor: The Senate has approved a bill which would protect union welfare funds and provide for election of officers by secret ballot. Although a similar bill was killed in the House Education and Labor Committee, there is still a chance it will be brought before the House this week under suspension of the rules. Passage would require a two-third vote.

Housing: An omnibus $2.4 billion housing and urban renewal bill is expected to be brought before the House this week, also under suspension of the rules. The measure has been approved by the Senate.

Education: The two Houses last week were at odds on an aid-to-education bill designed to provide the Nation with more scientists. The Senate approved a broad $1.37 billion measure which would provide 23,000 scholarships with maximum annual grants of $250 per student. The House measure, which carried a $900 million appropriation, entirely eliminated the scholarship provision.

Foreign aid: The Senate will vote this week on the House-approved $3.5 billion foreign aid bill.

When it finishes its work—probably Thursday or Friday—the 85th Congress will have completed a session which proved once and for all that the American Government can function quite well as a 2-party coalition.

Its most notable achievements—Alaskan statehood, civil rights legislation, defense reorganization and extension of reciprocal trade—have refuted President Eisenhower's 1956 warning that with Republicans in the White House and Democrats in control of Congress the Nation could expect a cold war of partisan politics that would bring chaos.

There were times, of course, when the bipartisan approach to building a sound legislative program was threatened by party-line politics. The fright generated by a recession and Russia's sputnik invited finger-pointing and blame-placing. But the developing legislative program was snatched back to safety by two remarkable rescuers, Senate Majority Leader LYNDON JOHNSON and House Speaker SAM RAYBURN.

Rafer Johnson Will Return to United States as National Hero

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1958

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks I am including herewith in the Appendix of the CONGRESSIONAL RECORD a further installment report on the current successes of Rafer Johnson in the field of the decathlon in competition in Europe. His achievements are of great significance to the United States because of their quality, the fact that he is an American citizen and the product of American schools, and the further fact that he is a member of a so-called minority group in the United States. The installment I refer to is an article which appeared in the August 10, 1958, issue of the Fresno Bee over the byline of Bruce Farris. I wish to further indulge in a little local pride by stating that Mr. Johnson's predecessor in the field of breaking records in the decathlon was Bob Mathias, an outstanding athlete from Tulare, Calif., a city in my congressional district. Mathias and Johnson were reared only a very few miles apart in California.

The article follows:

RAFER JOHNSON WILL RETURN TO UNITED STATES AS NATIONAL HERO

(By Bruce Farris)

KINGSBURG.—Rafer Lewis Johnson will return to the United States Tuesday to be hailed as a conquering hero following his world record decathlon performances in Russia, but to this small community he is much more than the finest all around athlete in the world.

He is a living example of what can be accomplished in this country through hard work, clean living, determination, and faith.

This town is less than 20 miles from Tulare where in 1948 and 1952 another teenage marvel, Bob Mathias, first rocketed the San Joaquin Valley into the world decathlon Olympic games victories.

The 3,000 residents of Kingsburg have witnessed many of Rafer's mightiest triumphs and many know it is the site of a near tragedy which could have ended this fantastic athletic story before it began.

Here live his parents, Mr. and Mrs. Lewis Johnson, who brought Rafer here when he was 11 years old and who have lived, worked, and been an integral part of the community ever since.

Mrs. Johnson, nicknamed Dimples because of her happy disposition, will fly to Los Angeles Wednesday or Thursday where the 6-foot 3-inch, 200-pound, 22-year-old UCLA predentistry student will be honored at a reception. Another welcoming committee will meet him at the Fresno air terminal and the grand climax will come in a hometown reception in Kingsburg's new city park.

These and other triumphs in the East are only part of the 1958 Rafer Johnson story in which the press in all corners of the globe have hailed him as the greatest athlete in the world."

But turn the time machine back to the summer of 1948 when a grim-faced Kingsburg doctor told Rafer's frantic parents he might have to amputate the boy's right foot.

Mrs. Johnson gave this account of the incident the other day:

"Rafer and 2 or 3 of his friends were playing on a conveyor belt at the cannery. They would ride the belt to a point where it turns a corner and then they would jump off. Rafer did not jump in time. His foot was caught in the iron siding on the machine.

"I heard him yell and ran to help. I suppose I would have caught my hands in the belt if a workman had not pulled me back, but all I could think of was freeing my boy.

"They turned off the machine and had to dismantle part of it to get him loose. The sole of his foot was sliced nearly to the end of his heel. One large tendon was all that held it together. They rushed him to the hospital and for a while we thought they would amputate. The doctor finally sewed him up and Rafer was on crutches for nearly a year.

"You know," she reflected, "I still don't know how he pulled through it to compete in athletics."

"Rafer always was active from the time he was a baby," said Rafer's father with a twinkle in his eye. "We named him Rafer because it was the name I always wanted to have and I vowed to name my first born son Rafer Lewis. He always was a good boy and was a fine example for his brothers and sisters to follow. He did and still does everything well.

"You know, I hope to have 2 boys in the 1960 Olympics. Rafer's youngest brother, James, will enroll at UCLA next year and I am confident he can make the United States team in the broad jump or hurdles. I doubt very much if he will try the decathlon. I do think he will be a fine football and basketball player. Rafer also plans to play basketball again this year."

FUTURE IN DENTISTRY

How about the future—after 1960, what then?

"I am certain he will be a dentist," said the elder Johnson. "He has pointed toward that goal since he was a senior in high school. I know he mentioned professional baseball but I don't know how serious he is about it. He has not played baseball since his first year in high school. I remember he used to break a lot of bats when he was in grammar school but he was a pretty good hitter."

Johnson works in the Fishel products plant here run by John Fishel. Rafer inherits his height from his father who is 6 feet, 5½ inches tall.

Rafer was born in Dallas, Tex., and will be 23 years old August 18. He has 2 brothers and 2 sisters.

His father brought the family to California in 1943. They settled in Oakland where Johnson worked at Treasure Island and later bounced from Madera to Chowchilla to Fresno (where he stayed for about 2 months) before settling here.

GOOD STUDENT

"Rafer always has been a good mixer and an excellent student," said Kingsburg Vice Principal Ejnar Peterson. "I don't think studies came easy to him but he is a very hard worker. He made the scholarship society 7 of his 8 high-school semester and earned a lifetime membership.

"He spent a lot of time in athletics during high school (he earned 11 varsity letters)

but he always found time to get all of his school work in on time. He participated in the school plays and other activities and never once during the 4 years was he a disciplinary problem.

"The thing I noticed most about him in athletics was his ability to relax between action. When the play started again he was always alert and ready. Few of us doubted he would be anything but outstanding in anything he tried."

Rafer worked most of his summers for Wilbur Shannon, automobile dealer, or at the California Packing Corp. cannery run by Harold Strand.

ONE OF THE FAMILY

"He is just like one of the family to us," said Shannon. "He worked for me many years and has been a great inspiration to my boy Gary. He always liked jobs with a challenge and he has the ability to do many things. He does most of the work on his own car. He plans to put a new motor in it when he returns next week."

Some of his closest friends are high-school classmates Dale Bengston, Eddie Mascarin, Calvin Johnson, and Guy Troisi. Rafer, Monte Clark, Clarence Treat, and Calvin Johnson formed a singing quartet and specialize in spiritual songs. Rafer is a baritone and his friends say a good one.

Rafer was president of his senior class at Kingsburg High School, and this fall will assume his duties as student-body president at UCLA, a school of more than 17,000 students.

ACTIVE IN CHURCH

He always has been active in the Mission Covenant Church here and is a leader in the campus Crusade for Christ organization in Los Angeles.

Rafer can lay claim—although you would never hear it from him—to one of the largest and most spectacular trophy collections in the world. He has nearly 100 large trophies, some more than 3 feet high, and 3 large cardboard boxes packed 3 or 4 deep with small boxes containing medals won in elementary, high school, and college. He has been honored in nearly every continent in the world and has made two overseas goodwill trips for the United States State Department.

Several San Joaquin Valley athletes had parts in shaping his career which led to his participation in the decathlon.

Troisi, another stellar all-around athlete at Kingsburg, competed against Rafer in track events from elementary school age on.

"Guy was much bigger and stronger in those days," said Kingsburg Coach Murl Dodson, "and Rafer had to work on form and technique in an attempt to beat him in the weight events."

Leamon King, Delano High School sprint star, forced Rafer to take up hurdling.

"We knew Rafer couldn't beat King in the sprints, so I switched him to the hurdles," continued Dodson. "He was a natural in that event from the start and it always has been one of his strongest races."

Ducky Drake, his track coach at UCLA, told this reporter during the last invitational decathlon in Kingsburg:

"I think Rafer's biggest asset in athletics is his ability to adjust to the conditions and situations. If I notice he is doing something wrong, I have to tell him only once and he corrects it. It has been this way all the time I have known him. I don't think there is any limit to what he can do."

Kingsburg residents are divided in which path they think he should follow.

URGES FOOTBALL

"I think he should quit track and try football," said one. "He can't eat medals."

Others thought he would be an excellent boxer, a movie actor (which is what Mathias is doing), and others simply say they think he can do anything he puts his mind to.

Rafer is a good bowler, he enjoys fishing, and would like to take up golf if he had more time. Time is one thing which has been scarce for him the past 3 years.

His track career may reach its peak in Rome, Italy, in 1960, where he hopes for a second and most certainly the last time to represent his country in the Olympic games.

Rafer still is a young man, but he already has taken his place alongside such as Jesse Owens, Jackie Robinson, and Kenny Washington, who many feel accomplished more in world diplomacy through their efforts on and off the field of athletics than many statesmen have around conference tables.

THE JOHNSON STANDARD

Rafer Johnson, in compiling his world record total of 8,302 points in Russia recently, bettered the marks of the immortal Jim Thorpe in 8 of 10 events and the marks of Bob Mathias and Vasily Kuznetsov in 6 of the 10 events.

Johnson bettered Thorpe's marks in 8 of the 10 events. He also was ahead of Mathias in 6 of the 10 events when the Tulare Wonder Boy established his high mark of 7,887 in 1952.

The big Kingsburg athlete also bested Vasily Kuznetsov, of Russia, in 6 of 10 events when the Russian set his top mark of 8,014 points this year.

Here is the event-by-event comparison:

Event	Johnson, 1958	Kuznetsov, 1958	Mathias, 1952	Thorpe, 1912
100-meter dash	10.6	10.8	10.9	11.2
Broad jump	23'6¼"	24'6⅜"	22'10⅜"	22'2¼"
Shotput	48'2½"	45'7½"	50'2¼"	42'5½"
High jump	5'10¾"	6'¾"	6'2¾"	6'1⅝"
400-meter run	48.2	49.6	50.2	52.2
110-meter hurdles	14.9	15.1	14.7	15.6
Discus	160'11⅞"	154'9½"	153'10"	121'3⅞"
Pole vault	12'11⅞"	13'1½"	13'1½"	10'7½"
Javelin	238'1⅞"	214'6½"	194'3⅛"	149'11⅝"
1,500-meter run	5:05.0	5:04.0	4:50.8	4:40.1

Export Market for Coal

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mrs. KEE. Mr. Speaker, one of the most heartening developments for the United States coal industry has been the development in recent years of a strong export market. During 1957 about 55 million tons of coal were shipped to overseas markets, thus providing jobs for a large number of miners.

Recent developments overseas have raised some serious threats to this important export market and unless the trend is checked it could result in a complete loss of these overseas shipments. As a matter of fact, during this year of 1958 we are facing a loss of 12 million tons in exports.

Where does this threat to United States coal come from? It stems from the economic war which the Russians have declared upon the United States and the West in general. Russia and its satellites are going all out to displace United States coal in markets which were built up through hard work and smart, aggressive merchandising.

The saddest part of the story is that many so-called friendly countries are using United States dollars, made available as a part of the foreign economic aid program, in exchange for coal from Russia and Poland.

Other countries which in the past have used United States coal are now making barter agreements under which they exchange their products for Communist coal. In the long run these countries will find that they are paying through the nose for this Communist coal. In barter exchanges, the Russians always charge artificially high prices for their coal or else accept products in exchange at a price far below the prevailing world market.

The United States coal industry has called this serious matter to the attention of the State Department. All sorts of vague promises have been made that proper action would be taken.

Unfortunately, the practice has not stopped. In fact, it has become more prevalent in recent months. Just recently, Argentina concluded a trade agreement with Poland under which Polish coal will be imported to replace about 2 million tons of United States coal each year. Japan's deal with Communist China to use coal from that Communist country instead of United States coal is another example of the type of competition United States coal is facing.

It is my firm belief that the United States Government, in its dealing with countries which are turning to Communist countries for coal, is not exercising its full powers in behalf of this great American industry. We should recognize this is a part of the Russian trade offensive and take appropriate action to counter it.

The coal industry is beset by serious problems at home. The Government encourages the import of residual fuel oils from "friendly" nations despite the fact that this "liquid coal" is competing directly and unfairly with domestic coal.

The Government is encouraging Federal installations to convert from coal to other fuels for heating purposes despite the fact that in many instances coal is a more dependable and cheaper fuel source.

Now, the Government is standing by while the coal industry fights a losing battle with Communist coal in foreign countries. The Government should step in and use all of its influence to help the United States coal industry in the fight it is waging for important export markets against long odds.

The American's Creed

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. REED. Mr. Speaker, Constitution Week begins September 17. Every day should be Constitution Day in the minds of all true Americans, because every day we individually, and as a people, profit by the rights and liberties which the Constitution assures us.

We should be thankful that one day is set aside and designated as Constitution Day. It gives each of us as patriotic citizens an opportunity to demonstrate our reverence to this great charter whose provisions protect our liberties. It is day to day tribute to the founders of our Republic, and to all who have made the supreme sacrifice to preserve, protect and defend our precious heritage. It is a day of days to ponder the words of Justice Story of the Supreme Court: "Let the American youth never forget that they possess a noble inheritance, bought by the toils and sufferings and blood of their ancestors, and capable, if wisely improved and faithfully guarded, of transmitting to their latest posterity, all the substantial blessings of life, the peaceful enjoyment of liberty, property, religion and independence.

The structure has been erected by architects of consummate skill and fidelity; its foundations are solid; its compartments are beautiful as well as useful; its arrangements are full of wisdom and order; and its defenses are impregnable from without. It has been reared for immortality, if the work of man may justly aspire to such a title. It may, nevertheless, perish in an hour by the folly or corruption, or negligence of its only keepers, the people. Republics are created by the virtue, public spirit, and intelligence of the citizens. They fall when the wise are banished from the public councils, because they dare to be honest; and the profligate are rewarded, because they flatter the people in order to betray them."

This day should remind every citizen of our Republic, of that great document, the American's creed, by William Tyler Page:

"I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag, and to defend it against all enemies."

Every American citizen should read the tributes paid to William Tyler Page, the author of the American's creed in the book by Mrs. Myrtle Cheney Murdock, entitled, "The American's Creed."

Shortage of Nurses

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, the nursing shortage problem is quite serious. It is acute in Philadelphia, as well as throughout the country. I believe the situation is so critical that Congress should be urged to study the problem with a view to determining what aid can be extended. Accordingly, under leave to extend my remarks I am quoting a letter addressed to me by Dr. Pascal F. Lucchesi, executive vice president and medical director of the Albert Einstein Medical Center of Philadelphia. The letter follows:

ALBERT EINSTEIN MEDICAL CENTER,
Philadelphia, Pa., August 8, 1958.
Congressman HUGH SCOTT,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE SCOTT: Since the northern division of the Albert Einstein Medical Center and other hospitals are located in your congressional district, I am taking the liberty of bringing to your attention the nursing shortage problem.

This shortage reaches to virtually all hospitals in the United States. A few months ago, the Women's Bureau of the United States Department of Labor disclosed that the Nation was short 70,000 trained nurses. If anything, the situation has worsened since then. It is acute in Philadelphia, but this is only one of many cities with a critical nursing shortage.

As you know, many hospitals including the Albert Einstein Medical Center, maintain schools to train nursing students. The schools operate at a financial loss to the institution. At Einstein Center, for instance, the charge to a student for the full 3-year course—including tuition, food, private room, uniforms and books—is $455. A survey made last year by the Center disclosed that it costs us $4,290 per student nurse for the 3 years, including both direct and indirect costs. As you can see, the cost is almost 10 times the charge to the student. We also provide a number of free scholarships.

Thus, you can see that hospitals such as ours are doing their best to supply nurses for the ill persons of the Nation.

However, because of steadily rising costs in all operations, hospitals have reached the point where we are financially unable to increase our burden in this respect.

It would seem that the time has come for Congress to study this problem and to provide some help. There is more than a moral justification for Congress to step in at this point.

As a matter of fact, the armed services and Veterans Administration do not train any nurses, but draw heavily on the trainees of the civilian hospitals.

As institutions operated by patriotic Americans, our civilian hospitals are proud to have our trainees enter military service and the VA.

However, I do not believe the shortage and financial problem, as I have outlined it above, is fully recognized. I think if Congress is made aware, it will take steps to provide nursing scholarships, at least to the extent that our graduates go into Government nursing service. This would help to bring more girls into nursing and, thus, to reduce the appalling shortage faced by the Nation.

I am writing as an individual, speaking only for the Albert Einstein Medical Center. But it is a fact that national organizations in the fields of medicine, hospital administration and nursing have all taken cognizance of the shortage and the need.

Anything you can do to bring the facts to the attention of the entire Congress would be most helpful at this time.

Respectfully yours,
PASCAL F. LUCCHESI, M. D.,
Executive Vice President and Medical Director.

Watershed Development Program

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of my weekly newsletter Keenotes for the week of August 11, 1958:

KEENOTES

(By Representative ELIZABETH KEE)

Conservation of soil and water is one of the most pressing problems facing the country today. Soil and water are not inexhaustible. We cannot expect the United States to retain its position as the world's preeminent nation if we squander these two precious resources.

It is because of the compelling urgency of the soil and water problem that I have strongly supported the watershed development program—an entirely new cooperative approach to the problem of saving of water and soil and making the maximum use of them and, at the same time, preventing damaging floods.

Congress created the watershed development program in 1954, making it possible for the first time for local, State, and Federal agencies to enter into agreements to control the flow of water in an entire watershed. A number of pilot projects were authorized, many of which are now nearing completion.

On the basis of a recent study I have made on the effects of this program, I am convinced that it has been one of the most successful conservation programs ever undertaken. The cost has been extremely modest, local initiative has been emphasized, and the role of the Federal Government minimized.

The program operates on the theory that floods can be minimized and the maximum amount of water retained on the land if the problem is attacked at the headwaters of small streams. Dams to retard the flow of water during flooding are built and channels of small streams are cleared of underbrush, straightened and deepened to speed the flow of water. In addition, farmers in the watershed area build farm ponds, plant trees, and

begin other practices designed to check the flow of water over their lands.

The Salem watershed in West Virginia was one of the first of the pilot projects undertaken. It is now practically completed and will be dedicated on September 11. The experiences in watershed development are dramatic proof that the program will work.

During recent heavy rains, after most of the work was completed, the level of floods was considerably reduced, thereby greatly reducing property damage. Also, water receded much faster after flooding rains. The flow of water across farmlands, which used to carry away tons of rich topsoil, was slowed down considerably.

About seven projects in West Virginia are either under construction or in the planning stages. Others, including the Brush Creek watershed in Mercer County, are being considered now.

One thing I like about the program is the fact that local interests must initiate the projects. Local groups must also help defray the costs of construction and maintenance. The program seems to have won wide acceptance on the part of farmers and other interested parties.

When the watershed approach is applied nationwide, it should be possible for the Federal Government to avoid having to build costly downstream flood control dams. If the water can be retained in the upper reaches, the problems of many downstream areas will be solved.

I regard the watershed legislation as an example of what can be accomplished for our people when all agencies of Government get together in a cooperative venture. Not only can money be saved but local and State initiative is preserved.

I was gratified to have had the opportunity to work and vote for this program in Congress, and I will continue to do everything I can to see that it is carried out as rapidly as possible.

Consideration of Legislation Under Suspension of the Rules

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BEAMER. Mr. Speaker, previous commitments made in my district make it imperative that I return to Indiana after today's legislative business has been completed. For these reasons, I wish to extend my remarks in the Appendix of the RECORD.

First, the move on the part of the majority leadership in attempting to consider 35 bills under suspension of rules was most unfortunate. Several of the measures were worthy in principle but the bills were both poorly drafted and wholly inadequate. Under suspension of rules, the House Members have no opportunity to either debate in detail or to offer perfecting amendments.

I sincerely believe that people desire some legislation that would correct the abuses of certain labor unions as exposed by the Senate Labor Rackets Committee. However, S. 3974, the Kennedy-Ives bill, fell far short of correcting any of these evils. In fact, the House Committee on Labor and Education voted 22 to 7 against reporting the measure. I joined the many Members who had hoped that an acceptable bill could have been prepared and discussed with an open rule. This would have been fair to labor, management, and to the Members of the House of Representatives.

In the second place, there were many bills which had been considered in committees that had not been listed for votes in the House. The railroad retirement bill had been reported out of the House Interstate and Foreign Commerce Committee and some action should have been taken on it. In fact, in the committee I had supported a compromise measure that was reported to be at least reasonably acceptable. I had wanted to vote in support of some such measure because the railroad retirement fund had been placed in an actuarial hazard by action of the previous Congress.

Also, I join others in deploring the fact that so many millions and billions of the taxpayers' dollars were threatened by many of the bills on this list of 35 suspensions.

Finally, if these bills had not consumed the time of the House, then conference reports of bills which had passed both the House and the Senate could have been accepted. For 8 years I have worked for a flood-control program for the upper Wabash River Valley. I have voted each time for the authorization bill and this year the Congress sent and acceptable bill to the President which he signed into Public Law 85–500. I also voted for the appropriation bill for the rivers and harbors program. The conference committee report could have been presented and, of course, if a recorded vote would have been taken, I would vote yes again. I have asked the pair clerk to pair me in favor of this bill if a vote is taken. For that matter, my voting record has been established by past votes if any conference reports require further rollcalls.

Upon my return to the district I shall be called upon for reports on the work of the 85th Congress to many groups. It is going to be very difficult to find many actions deserving of praise. It is apparent that it was one of the "spend-ingest" Congresses in our history with the Congress appropriating far in excess of the request of the President. Perhaps this Congress will be best known and longest remembered by the necessary legislation that it failed to enact and by the partisan politics that seemed to flavor so many of the legislative proposals.

Travel Rights of American Citizens

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. ROOSEVELT. Mr. Speaker, because I so thoroughly agree with the statements and position taken by the B'nai B'rith on the rights of American citizens to travel freely about the world in pursuit of legitimate activities without restriction as to religion, race, or other artificial limitations, I bring the following letter to the attention of my colleagues. In light of recent events in the Near East, the views expressed therein merit our consideration and support:

FAIRFAX LODGE NO. 1566, B'NAI B'RITH,
Los Angeles, Calif., August 11, 1958.
Hon. JAMES ROOSEVELT,
Congress of the United States,
Washington, D. C.

DEAR REPRESENTATIVE: One of the cardinal functions of United States sovereignty is the protection of the integrity of American citizenship and of the proper rights of American citizens in their pursuit of lawful trade, travel, and other activities abroad.

It is a primary principle of our Nation that no distinction among American citizens shall be made on the basis of their individual religious affiliations. Any attempt by foreign nations to create such distinctions among our citizens in the granting of personal or commercial access, or any other rights otherwise available to American citizens generally, is wholly repugnant to our laws and intolerable to our principles. This attitude our Government has historically and successfully maintained in its relations with foreign countries on several notable occasions.

Now it is abundantly clear that the integrity of American citizenship has been and continues to be blatantly flouted by a systematic boycott and blacklisting by the Arab League of any American enterprise that maintains business ties with Israel or with Israel firms, and of any business owned by Jews or having Jewish employees.

Moreover, Arab ports are closed to American vessels that stop at Israeli ports, American planes landing in Israel are forbidden to fly over Arab territories, and, indeed, no American is allowed entry to an Arab country from Israel except on official business.

As further affronts to our national principle barring distinctions on religious grounds, we cite (1) the refusal by Saudi Arabia to permit the assignment of American citizens, solely because of their religious faith or derivation, to military, diplomatic, or civilian duties for our Government at the Dhahran Airfield, and, additionally, to refuse, for the same reason, American concessionaires to employ certain personnel for work in Saudi Arabia; and (2) the refusal of entry and travel visas by most Arab League states to certain United States citizens exclusively because of their religious faith, or religious derivation.

We deplore this Arab boycott and blacklisting of Americans because it constitutes a serious impairment of the rights and privileges of American citizenship. Continued appeasement and capitulation to it frustrate efforts of the United Nations to achieve peace in the Middle East, foster conflict which undermines the efforts of our own Government to allay tensions in that area, and implies American sanction for a most intolerable form of international intimidation.

We therefore call upon the President of the United States to proclaim to all nations that our Government tolerates no distinction based on religious faith among its own citizens, just as it makes none among the citizens and subjects of any other country, and that it regards any such distinctions directed against American citizens as incompatible with the relations that should exist among friendly nations. We also urge the President to instruct the United States delegation to the United Nations to protest the Arab boycott and organize resistance to it in the U. N.

We urge further that the President and Secretary of State reassert the prerogative of our Government, and take immediate steps

to safeguard that right, to assign qualified American citizens to military, diplomatic, or other service within any foreign country regardless of that country's objection to such citizens on grounds of religious faith or affiliation.

We also call upon the President and the Secretary of State to insure that in their execution, application, and administration, all treaties, conventions, or executive agreements entered into or renewed between any foreign state and the United States shall expressely provide that no American citizen shall, solely because of religious affiliation or derivation, be denied the advantages of travel, employment, or trade, or any other benefit made possible by such documents.

Very truly yours,

FAIRFAX LODGE No. 1566,
B'NAI, B'RITH,
PHILIP R. SCHAFFER,
President.

Oil Imports and the New Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. VURSELL. Mr. Speaker, the domestic oil industry is still suffering from excessive oil imports. At a time when the domestic industry should be expanding its exploratory and development activities, the reverse is true. Overall drilling operations for the Nation as a whole are down 10 or 12 percent. Wildcat drilling, the forerunner of new oil reserves, is down some 20 percent. Production during the first half of this year likewise is down some 10 percent below last year.

These trends are a warning of real danger ahead if the domestic industry is to be looked upon, as in the past, as an assured source of supply for all needs, including an expanding economy as well as emergency requirements.

For the past year, the administration has been endeavoring to correct this situation. Under the defense amendment of the Trade Agreements Extension Act of 1955, the President inaugurated the present voluntary program to limit imports. Some good has been accomplished. The continuing deterioration of the domestic industry makes it clear that further action is needed.

The recently enacted Trade Agreements Extension Act of 1958 gives further guidance and direction to the President with respect to this oil import problem. The new amendments to the defense amendment spell out through specific guidelines and definite standards the intent of Congress with respect to importations of any commodity into this country which threaten the national security.

Mr. Speaker, under this new authority, the President and other administration officials concerned have the responsibility to adjust the present oil import program so as to bring it into conformance with the new law. Under this new authority, the President has ample authority to reduce imports to levels which will permit the domestic industry to carry on a program of exploration and development adequate to serve the national security and a growing economy.

I urge the President to review the program to this end. I am confident that he will do so and that further early action will be taken to reduce oil imports.

The new law is specific and definite. For the first time, Congress wrote into the law that derivatives or products of an article such as crude oil must also be considered if imports of the basic article are such as to threaten the national security. I believe this provision of the new law requires that the President now take action to bring oil products within the import limitation program.

The necessity for early action to limit imports of oil products is obvious. Under the voluntary program, crude oil imports have been substantially reduced under the peak levels reached this time last year. But oil products, which have not been within the program, have increased at an alarming rate and have offset the gain made in reducing crude oil imports. In 1954, total product imports were less than 400,000 barrels daily, amounting to about 6 percent of domestic production. During the first 6 months of this year, product imports averaged almost 650,000 barrels daily, amounting to 10 percent of domestic production. Product imports not only displace the domestic oil producer, but they likewise displace the domestic oil refiner and the domestic laborer who works in a refinery.

Most important, the new law contains specific standards to guide the Director of the Office of Defense Mobilization and the President in determining the level of imports that endangers the national security. Primary among these standards is requirements of growth of the industry involved necessary to provide for the national security. In determining whether or not an industry is growing adequately the President and the Director must consider the investment, exploration, and development necessary to assure such growth. In addition, they are required to consider the impact of imports upon the economic welfare and condition of the domestic industry concerned.

IT'S TIME TO ACT

The record of decline rather than growth on the part of the domestic oil industry during the past 2 years makes it clear that further action to limit imports is now necessary under this new provision of law. The intent of Congress in this regard was made definite and unmistakably clear in both the House and the Senate. When this matter was before the House, Congressman MILLS, chairman of the Ways and Means Committee, had this to say:

> If drilling and exploration activities do not reach a satisfactory level, then under this provision, the President or his designate would have the responsibility of reevaluating existing programs for the regulation and control of imports to see that they meet the requirements of the new standards in the committee bill.

I believe the administration is fully cognizant of the full meaning of the new law. This is borne out by the testimony of Secretary of State Dulles before the Senate Finance Committee. At that time the above statement of Congressman MILLS was presented to the Secretary and he was asked if he agreed with that statement. He answered in the affirmative. In view of the legislative history together with the expressed understanding of Secretary Dulles, I am confident that the administration will act to carry out the purpose of this provision.

Mr. Speaker, as I have stated, the present voluntary program has brought about a substantial reduction in crude-oil imports. Despite this accomplishment, because of the drastic reduction in domestic production, imports of crude oil as well as products continue in my opinion to be excessive. The President's Cabinet Committee in 1955 found that the ratio of imports to domestic production that existed during the year 1954 was the maximum safe level from the standpoint of national security. I believe that experience since then fully confirms the soundness of this finding. Imports since 1955 have continued to exceed the 1954 ratio and during this time operations of the domestic industry have declined to a serious and dangerous degree. It seems to me that this experience is persuasive in leading to the conclusion that imports, both crude oil and products, should now be limited to the 1954 ratio.

It is hoped those in the executive department will take quick and effective action to carry out the intent of Congress and give the domestic oil industry the additional protection it needs to regain its No. 1 place in the economy and defense of our Nation.

Saturday Review Critic Much Impressed With Ashland, Oreg., Shakespearean Festival

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the August 10, 1958, edition of the Medford (Oreg.) Mail Tribune:

DRAMA CRITIC IMPRESSED WITH FESTIVAL

Henry Hewes, 41-year-old drama editor and critic of the Saturday Review magazine, said Friday he was agreeably surprised and much impressed with the Ashland Shakespearean Festival.

He singled out the company's devotion to its work, the intelligence of its direction and some of its characterizations, and the high quality of its speech for special mention.

Hewes, who served under the critic John Mason Brown, before taking over his position on the internationally famous magazine 3 years ago, arrived in Ashland Thursday evening.

He had previously visited the Shakespeare festival in San Diego, Calif., and plans an article discussing the two enterprises. He saw The Merchant of Venice, Thursday night, heard tapes of King Lear, Friday, and attended Troilus and Cressida Friday night.

Hewes said he approved highly of producing Shakespeare's lesser known works, since it forced people to think freshly. He said people brought too many preconceptions to the better known plays, and tended to miss the intellectual challenge. "In England," he said, "they have so much Shakespeare they don't think about it."

He criticized, on the other hand, the festival's liberal recreation of the Elizabethan stage. He said it was the only reproduction this literal in the United States, that it was nice to have one such example but that he preferred a more imaginative setting. He described the effectiveness of a stage which would appear starkly Elizabethan at the outset, then gradually depart from it through elaboration of shifting of the set as the play progressed.

He also discussed the omitting of intermissions. He said it was a good thing to have in one place, since plays were produced this way in Shakespeare's time, but that it required a very devoted public.

"If a production is first-rate," he said, "I like to go on without intermissions. I get wound up in the play." Asked if he had missed the breaks during The Merchant of Venice, he replied, "I got my second wind."

More than 100 people overflowed the Gresham Room of the Ashland Public Library Friday afternoon to hear Hewes lecture on some principles of Shakespeare production. He emphasized realism, or "real things happening to real people" in the words of George Bernard Shaw.

"Find modern equivalents for Shakespeare characters, don't make them like men from Mars," Hewes said. "A touch of earth here and there never hurt Shakespeare," he added.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of my weekly newsletter Keenotes for the week of August 3, 1958.

KEENOTES

(By Representative ELIZABETH KEE)

The 2d session of the 85th Congress, which is rapidly drawing to a close, has been marked by three distinct moods:

1. Congress reconvened amid deep public concern over the tremendous Russian advances in science and technology as evidenced by the launching of two earth satellites.

2. Public concern shifted early in the spring from this grave national problem to the growing threat of a serious economic recession.

3. In recent weeks, attention of official Washington and the public has shifted to foreign affairs and particularly to events in the Middle East which have created the most serious war threat since Korea.

This has, indeed, been a momentous session of Congress and, contrary to some who have tried to label this a do nothing Congress, I believe this session will go down in history as one of the most productive in recent years.

In many respects, Congress was ahead of the administration on matters relating to outer space. Congress demanded that positive action be taken so this country could overtake the lead which the Russians had taken in this vital field. Both Houses appointed special committees on space and astronautics and let it be known in no uncertain terms that they wanted a single new agency to direct United States activities in space. The result has been the creation of a new agency on space and astronautics, and in the future all activities will be closely coordinated. This should save money and, more importantly, save time in space developments.

I am sorry that the sense of urgency seems to have disappeared. We are still behind the Russians and constant driving and pushing will be needed to overtake them. I am sure that the Congress wil not neglect this issue.

People are alarmed over the high level of unemployment and other indications of an economic downturn. Recently, there have been signs of an upturn, which is good news to all of us. But here, too, I am afraid that the sense of urgency has gone out of this problem. We are not out of the economic woods despite the optimistic indications. A sound, prosperous America is absolutely essential if we are to maintain our freedom.

An atmosphere of gloom was apparent when events in the Middle East assumed crisis proportions. There is no denying that the situation is extremely grave. As much as any of us might deplore the necessity for sending American troops into a danger area, we can agree, I am sure, that we all must support the stand taken by the President. Many people here believe the gravest dangers are now passed. This may be true, but the fact remains that this is a crisis that will be with us for a long time. We cannot afford to allow any temporary easing of the crisis to lull us into any feeling of false security.

Eleventh Anniversary of the National Student Association

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, this year marks the 11th anniversary of the United States National Student Association, one of our most important nationwide organizations of young people.

A study of this fine organization will show that our young people are concerned—and deeply—with the great issues of our life and times.

They are concerned, as young people of our Nation have always been, with the enduring values of our civilization and they are today, as ever, prepared to defend our country to the death. In wartime these young people make up the bulk of our armed services and to question their loyalty is a disservice to our country.

The United States National Student Association is a confederation of student governments of colleges and universities throughout the country. Its national leadership—this year as in previous years—has been elected by the National Student Congress, comprising delegates elected by the member schools of the association.

In a statement of evaluation adopted by the three major deans' organizations in the United States National Association of Womens Deans and Counselors, the American College Personnel Administrators at their meeting in St. Louis last spring, declared that the United States National Student Association has led the mobilizations of the unions of students of the free world in combatting the partison propaganda and distortion of truth fostered by the Communist-led International Union of Students. The statement went on to say that the United States National Student Association strives to symbolize the youth of the free world to the students in those critical areas where the battle of ideas has not yet been resolved, and has demonstrated that experience in democracy aids students in combatting influences that would undermine or destroy our way of life.

President Eisenhower wrote the United States National Student Association, when it received a $25,000 grant from the Ford Foundation for the sponsorship and execution of a project on student responsibility in higher education, that—

I was glad to learn of the National Student Association's proposal for developing in the student community a better knowledge of the issues confronting higher education—issues that there emphasized in the recent report of the Committee on Education Beyond the High School. It is very satisfying to me to see the responsible and mature reaction of your organization to these problems. The fact that your program provides opportunity for enlisting the fresh thinking and vigorous dedication of a million young people in our colleges and universities makes this one of the most promising efforts undertaken in this area of endeavor.

The delegates to the 11th annual congress of the United States National Student Association will assemble August 20, 1958, on the campus of Ohio Wesleyan University at Delaware, Ohio. I extend to them on this occasion greetings and best wishes for their continued good works, in consonance with their constitution which declares it is the purpose of their organization to foster the recognition of the rights and responsibilities of students to the school, the community, humanity, and God, and to preserve the interests and integrity of the Government and Constitution of the United States of America.

I include here some statements and background information from The American Student—Profile and Promise 1947–57, a publication of the United States National Student Association, for the information of my colleagues:

GREETINGS

Representing a vast and lively constituency, your organization has done much to direct the traditional energies and free spirit of students toward constructive interest in community, national, and international affairs. As you enter your second decade of service I am sure you will continue to advance the building of good citizenship and responsible government, the foundations of freedom and world peace.

DWIGHT D. EISENHOWER,
President of the United States.

Almost a year ago, the world was shocked, yet thrilled, by the valiant effort of the Hungarian students to free their nation from the insufferable yoke of Communist tyranny. Although the students were tragically unsuccessful in their attempt to gain freedom and justice, they dramatically reminded the world of the idealism of youth.

American students share with students throughout the world a common vision and attitudes of hope and optimism for the future. They want to live in a world that will be fair to them. They seek a world of peace and opportunity so they can rear their families in a normal way without fear and anxiety. American students do not want war on the unsettling threats of war. They do not want a nation torn internally by class struggle or racial tensions. Americans, young and old, seek a world at peace, in which they can contribute their share to the welfare of all.

The United States National Student Association has developed and matured during the past 10 years. Through your adherence to the principles of your organization and a large measure of enthusiastic willingness to work, the horizons of Americans students have been broadened and the Nation and world have profited.

RICHARD NIXON,
Vice President of the United States.

The association has not only done much to stimulate the student community's interest in national and international affairs, but has provided a valued and time-tested institutional framework by means of which students throughout the country can make their valuable contribution to the life of the Nation. From the ranks of those who have been active in the association has come a most outstanding group of young men and women who are already shouldering major responsibilities in journalism, law, politics and the sciences. The Nation is indebted to the National Student Association for its contributions to our national life. My sincere hope is that you will continue to meet the challenges of our times in the same forthright and courageous spirit as you have during the past 10 years.

JOHN F. KENNEDY,
United States Senator from Massachusetts.

USNSA is to be commended on its valuable contribution to campus activities in the past. We who are interested in the well-being of our college students look to your group for continued cooperation and guidance in this vital area.

Your keen and active interest in all phases of student life eminently qualifies you for this role.

CLIFFORD P. CASE,
United States Senator from New Jersey.

You have much to be proud of on this, your 10th anniversary. In the international field you have increased the understanding between students of many nations, promoted a truer picture of the United States, and provided workshops and seminars for the education of students interested in international affairs.

On the domestic scene your fight for legislation to meet our educational needs is commendable, and I urge you to continue it. May I also suggest that you consider carefully the implications of the current trend of our society toward conformity, stagnation and complacency. You can be instrumental in stimulating students and promoting individual thought and achievement. The challenges you face are enormous. They can only be met through the full play of inspiration and ingenuity.

JOSEPH S. CLARK,
United States Senator from Pennsylvania.

FROM THE ADDRESS BY HUBERT H. HUMPHREY, UNITED STATES SENATOR FROM MINNESOTA

Too many persons in the United States have gotten the country club attitude. Instead of working hard, with only brief intervals for rest and relaxation, we spend most of our time at the club.

Too many Americans are timid and lack the imagination necessary for world leadership. Wherever men seek freedom, they look to us to set high standards. When we fail to show the qualities of leadership, the whole world becomes flabby.

You, as students, can set new standards of inspiration, conviction, and idealism for our Nation. Don't be afraid to be dissenters. Don't be unwilling to take intellectual risks, to dare, to pioneer, to challenge.

Too many people who talk about the need for good government are unwilling to get into politics and get it. Both of our major parties can stand a world of improvement.

You, as students, should not hesitate to get involved in political issues. Politics needs more students.

We politicians don't have all the answers. We're not geniuses.

Your voice will be heard if you want it to be heard. In some cases, you can be heard before Congress more easily than before a township board.

To be effective, your resolutions or your personal position should be well documented. You should expect and be able to withstand criticism. In making your views known, don't substitute popularity for leadership.

The National Student Association can become your voice in Congress, State legislatures, or city councils whenever you will it.

Perseverance pays off. Opposition to fingerprint provisions of the McCarran-Walter Act by United States National Student Association and other organizations has lead to their repeal in the Senate, and the House will soon follow. We've inched along where we should have made real yardage, but we have made progress.

You young people can be the social conscience of older society. You should be filled with convictions to the point where it bothers your parents.

There's plenty of work that remains to be done which directly affects you as students. The educational plant of America—public, private, parochial—is in trouble. The National Government, as I see it, has responsibility and a singular role to perform in the educational process.

The performance of our United States National Student Association help sustain my faith in youth. The record of the association over the past decade speaks for itself and is proof enough of the fine caliber of our young adults. Intellectually and spiritually United State National Student Association members deserve recognition as general spokesmen for American youth.

On the homefront, USNSA has spearheaded basic improvements in all aspects of campus life, promoting the cultural, social, and physical welfare of students. Member student bodies have joined together to tackle mutual problems and to stimulate democratic student government. Most important, USNSA brings us a dynamic, articulate student voice in national affairs. * * * What better way of supplementing student civic responsibility and offering vast educational opportunities?

ALEXANDER WILEY,
United States Senator from Wisconsin.

Certainly in today's complex world nothing is so important as it is to motivate young people to take upon themselves the obligation of greater service to their fellow citizens. It is with this in mind that I wish to congratulate your organization on providing for the students of America a greater opportunity of service.

JOHN M. ASHBROOK,
Chairman, Young Republican National Federation.

You are engaged in a task which is of profound significance to the welfare of our Nation and to the caliber of its contributions to the well-being of peoples everywhere. By making democracy work on the campus; by helping to eradicate prejudice, discrimination, and ignorance from student life; by broadening the horizons of your fellow students to understand their international responsibilities; by developing a political consciousness and sense of responsible political activity as the first duty of citizenship; and by raising educational standards and promoting serious academic endeavor you are improving the quality of the society in which we live.

Our Nation and the entire free world desperately need young leaders such as yourselves who care about the problems of society and who by becoming skilled in the art of politics and the techniques of democratic government are capable of doing something about them. That is why the National Student Association and you are so important to the world of tomorrow.

DAVID A. BUNN,
President, Young Democratic Club of America.

The National Student Association is doing a great work and it is more important than ever before that students in every part of our country realize the vitally important role they must play in working for world understanding and freedom.

Mrs. FRANKLIN D. ROOSEVELT.

UNITED STATES NATIONAL STUDENT ASSOCIATION

Benton, Pa., Air Force Base Wins Air Force Trophy

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Wilkes-Barre Times Leader of August 12, 1958, which discloses that the Benton (Pa.) Air Force Station has been awarded a trophy for proficiency by the Air Defense Command:

Benton Air Force Station became the first Aircraft Warning and Central Squadron in Eastern Air Defense Force this week to win the Air Defense Command's coveted "Mag-

gie" trophy awarded periodically for maximum performance of highly sensitive and costly radar equipment. Presentation of the trophy, which derives its name from the magnetron, an integral magnetic-type tube, was made yesterday to Capt. I. E. Bitterman, 648th AC&W squadron commander, by Lt. Col. Vita Fedorovich of the ABC Directorate of Electronics.

Officers and key noncommissioned officers present at the awarding of the trophy were: Lt. Joseph Marchese, electronics officer; Lieutenant Colonel Fedorovich; S. Sgt. Stephen Lizbinski, maintenance noncommissioned officer; Capt. Bitterman, M. Sgt. Frank Shipley, noncommissioned officer in charge of radar maintenance, and M. Sgt. John Polillim, noncommissioned officer in charge of communications.

Competing with some 150 radar sites in air defense, Benton Air Force Station was cited for keeping the magnetron operational for 636 hours without decrease in radar height finding capabilities. The average life span of the fixed frequency pulse-type oscillator lies in the neighborhood of 400 hours. The achievement, all the more noteworthy because of the magnetron's ultra-sensitivity requiring special techniques in shipping, handling, installation, and maintenance, was described as a direct result of unit teamwork.

The Air Defense Command instituted the Maggie award to inspire such teamwork and to spur maximum air defense at minimum cost to the American taxpayer. Less frequent replacement of the magnetron at the more than 150 stations across the country will result in considerable annual defense spending.

Humane Slaughter Is Passed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of August 15, 1958:

HUMANE SLAUGHTER IS PASSED

The humane slaughter bill has passed Congress at last, after decades of struggle. It now needs only the President's signature, which we hope he will soon affix, to become law.

Anyone who has ever visited an ordinary slaughterhouse may well wonder why it has taken 30 years for Congress to agree to the simple principle that an animal ought to be rendered genuinely insensitive to pain before it is butchered. Of course there has been opposition from some of the meatpacking houses because they feared that such methods (either electric stunning or carbon dioxide gas) would be very costly, although this has not proved to be the case in the long run. But this kind of opposition should never have been able to frustrate the very widely held conviction that needless cruelty is an affront to our civilization. And it is not just professional animal lovers who think this. Man is a part of nature, and indignity of cruelty to nature inevitably, in one way or another, sullies human dignity.

Perhaps no bill in recent history has had so many loyal and hard-working supporters. Many of these people, like Mrs. Christine Stevens of the Animal Welfare Institute of New York, were representatives of the humane societies. Many others were simple citizens with a conscience. Together they have literally bombarded Senators and Representatives with messages, which, apparently, have at last made their point. They formed a lobby, if you like, but it was a lobby of conscience. Animals, after all, have no vote.

The bill does not require meatpackers to slaughter humanely, but it does forbid Government agencies to buy meat which has not been so slaughtered, which is close to the same thing. The major packinghouses, which do so much business with the Government, will have to conform. Finishing touches in the form of an expanded bill, may be added at a later date. But the principle has been accepted, and that is the important thing.

Urban Renewal

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. PORTER. Mr. Speaker, slums and blight have long been a scourge of our cities Scarcely a community has escaped their ravages.. They have spread so far and so fast and their costs have become so great that they have become a problem of national concern.

Congress recognized that slums were a national menace when it enacted the Housing Act of 1949. That act provided for Federal financial assistance for slum clearance and redevelopment, but this program, as originally conceived, was only a partial answer. The President's Advisory Committee on Government Housing Policies and Programs found in 1953 that slums were spreading faster than they could be removed, and called for a program to prevent as well as to eliminate slums and to rehabilitate areas that could still be saved.

Congress responded with the Housing Act of 1954, which opened the way to a new total approach by providing Federal aid for slum prevention through conservation and rehabilitation, while continuing assistance for clearance and redevelopment. This new approach, which combines community, private, and Federal resources in a unified effort, is known as urban renewal.

Urban renewal begins with the community itself. First, the community must survey its total problem and draw up its own blueprint for effective action. This is known as the community's workable program for urban renewal. The workable program is, in brief, a plan of action for and by the community itself. Federal assistance is used to help the community carry out its plan when local and private resources alone are not sufficient to do the job. To qualify for major types of Federal aid, a community must have a workable program approved by the Housing and Home Finance Administrator.

TYPES OF FEDERAL ASSISTANCE

The types of Federal assistance available to communities for urban renewal include:

First. Planning advances to finance survey and planning work necessary before actual operations in the project area can begin.

Second. Temporary loans to provide the community with working capital in acquiring slum areas and preparing them for redevelopment.

Third. Capital grants of up to two-thirds, or under certain conditions three-fourths, of the net cost of projects. The net project cost usually is the difference between the cost of acquiring the land and preparing it for redevelopment, and the return from its resale at fair value to private redevelopers.

Fourth. Relocation payments to families, individuals, and businesses for moving expenses and losses of property resulting from their displacement by urban renewal projects or other governmental action.

Fifth. Demonstration grants to aid communities in studying, developing, testing, and reporting methods of slum prevention and elimination that will be of value to other communities in solving urban renewal problems.

Sixth. Urban planning assistance grants to State planning agencies to provide planning assistance to communities of less than 25,000 population which lack the funds and facilities for performing this work. Such grants may amount to half of the cost of this work. Similar grants are available to official State, metropolitan, and regional planning agencies for planning work in metropolitan areas and in urban regions, and in areas affected by disasters and expansion of Federal installations.

Seventh. An urban renewal service to provide technical advice and assistance to communities in preparing their workable programs and in carrying out other urban renewal activities.

Eighth. To encourage private investment in financing new housing and rehabilitation of existing residential structures in urban renewal areas, section 220 of the National Housing Act provides for special Federal Housing Administration insurance. This type of insurance can be used only in areas with urban renewal plans approved by the local governing body and certified by the Housing and Home Finance Administrator as eligible for this assistance. Similarly, under section 221, FHA is authorized to insure loans on liberal terms for new and rehabilitated private housing anywhere in the community to rehouse families displaced by urban renewal projects or other governmental activities.

Ninth. Low-rent public housing is provided for families of low income displaced by urban renewal projects. The Public Housing Administration, a constituent of the Housing and Home Finance Agency, is authorized, on application of the local housing authority and approval of the local governing body, to make loans and pay annual subsidies for public housing projects, within the maximum number of units authorized by Congress.

PROGRESS MADE

Since the Housing Act of 1954, urban renewal has made substantial progress. At the end of the last fiscal year on

June 30, 1958, there were 543 federally assisted projects underway in 328 communities throughout the United States. All of the $1.2 billion in capital grant funds made available to the Urban Renewal Administration through fiscal 1958 had been reserved, contracted for, or disbursed. Net reservations of capital grant funds for projects during the year totaled $300 million, an increase of $62 million over 1957. These reservations included both new projects and increases for projects already underway.

In the Fourth Congressional District of Oregon, an urban renewal planning advance of $65,975 and a capital grant reservation of $642,817 for Springfield have been approved, as have a $44,880 planning advance and a $211,260 capital grant reservation for Florence. Eugene has an application which is still pending.

Five communities and one metropolitan area in the Fourth Congressional District are benefiting from the urban planning assistance program. A grant of $11,500 has been approved for the Eugene-Springfield metropolitan area. Grants for urban planning assistance to other communities in the district have been approved as follows: Albany, $9,000; Coquille, $1,200; Grants Pass, $2,000; Sutherlin, $6,400; Sweet Home, $2,000. Applications for urban planning assistance for Medford and North Bend are pending.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by George Costello entitled "What's Urban Renewal," from the Roseburg (Oreg.) News-Review of July 22, 1958, as follows:

WHAT'S URBAN RENEWAL?

(By George Castillo)

A phrase which will become more and more familiar to Douglas County residents in future years is urban renewal.

At present, only two towns in the county are in a position to show much interest in it, but as the county grows and towns expand in population, it may become a vital phrase.

The two towns most likely to have immediate interest in Douglas County are Roseburg and Reedsport. Roseburg has cast only a passing look, being more interested at the moment in working out a planning program. But Reedsport, squeezed between the Umpqua River and the hills is taking a studied look at a need for making better use of its land.

The subject of urban renewal has become a subject for consideration by cities of the Nation because of a Federal program which apparently puts urban renewal in the realm of practicability.

It is designed to promote a self-help program whereby cities can convert the blighted and deteriorated tax-losing sections into new and revenue-producing industrial, commercial or residential districts. On the face of it, it sounds like good business.

SCOPE IMPOSING

The scope of the Federal program is imposing. It calls for complete elimination of areas in which houses have deteriorated to the point where it is feasible to raze and rebuild rather than to try to improve them.

The program is designed to (1) conserve good housing in cities through the use of codes and ordinances effectively enforced; (2) rehabilitate substandard units by encouraging the owners to remodel in accordance with the building and housing codes of the community; and (3) allow demolition of buildings too old, run down or dilapidated to lend themselves to recovery.

When demolition has been completed in an area, it would be replatted in accordance with good city planning and then sold to individual home owners, contractors and developers for reconstruction.

A program of such sweeping scope, is, of course, too much for a city. The cost of buying all the property, for example, in perhaps an 8-square block area of Roseburg would bankrupt the city. The additional costs of razing houses, carrying on studies and replatting would make it impossible.

Congress in 1954 recognized both the need and difficulties and authorized a broad program of Federal urban planning assistance. It agreed that the Government could help pay for financing surveys and planning work necessary, furnish working capital for acquiring land and structures in a blighted or deteriorated district, site clearing and preparation for redevelopment. It also agreed to furnish capital for preparation of the razed areas for sale to private enterprise.

TWO-THIRDS WOULD BE PAID

The difference between the return received from the sale of the renewed lands and the total cost of carrying out the project would be the project's net cost. The Federal Government will pay two-thirds of this cost and the city must pay the other third through cash, land, public facilities, demolition or other work contributed to the project operation.

Several towns in Oregon have already launched efforts to take part in the program. Portland and Springfield have received approval for survey funds and have launched the surveys. Eugene has applied for funds for a survey, and Florence and Reedsport are currently whipping up enthusiasm for projects.

Besides making sense in getting the best use from potentially valuable urban land, such projects should give cities a new start on orderly planning, which I feel is necessary to properly handle the great population increases expected in the Northwest.

It will cost less now to prepare for that orderly development than to try to patch on a piecemeal basis when developments have already taken place.

Wilkes-Barre Clergyman Will Celebrate 25th Anniversary of Pastorate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of August 13, 1958, which comments on the silver anniversary of the pastorate of Rev. F. W. Trumbore at St. Clement's Episcopal Church, Wilkes-Barre, to be celebrated on September 14:

JUBILEE OF PASTORATE

A special service and reception on September 14, marking the 25th anniversary of the pastorate of the Reverend F. W. Trumbore at St. Clement's Episcopal Ccurch, calls attention to an important milestone in the history of the 90-year-old parish.

When a clergyman spends a quarter century or more in a charge, there is little need to heap encomiums on him, for his record of service invariably speaks for itself. This certinly is true in the case of the Reverend Mr. Trumbore.

The passing of time has tended to cement the colse ties between him and his congregation, to which he has devoted 25 of his 30 years in the Episcopal priesthood. A churchman of considerable capacity, he has found his field of labor in South Wilkes-Barre and vicinity especially challenging, presenting him with many opportunities for service.

Despite his modesty and unselfishness, his spiritual leadership has asserted itself in many spheres. He has been equally successful as an administrator.

A native of Bethlehem, the Reverend Mr. Trumbore is an accomplised musician. The community itself has benefited from his talents through the Bach festival and other programs to which he has lent his talents.

It will be especially gratifying to the 400 members of St. Clement's Church on this occasion to know his fruitful career has a good many years to go in the normal course of events.

Census Shows Recession Slows Move From Farms

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1958

Mr. HAGEN. Mr. Speaker, a great deal has been said about the flight of farmers from the farm with the implication that the reason therefor has been other than normal distress situations on the farm. A statistical review covering several decades last past will reveal that the greatest exodus from the farm occurs during periods of general prosperity and that the only periods when farm population has increased in recent history have been periods of depression.

This conclusion is borne out by recent reports from the Census Bureau. These reports are discussed in the attached article which appeared in the August 10, 1958, edition of the Fresno Bee:

CENSUS SHOWS RECESSION SLOWS MOVE FROM FARMS

WASHINGTON.—The Census Bureau today said the recession may have slowed down the flights of farmers from the land.

A Bureau report said the farm population dropped by 1,430,000 to 20,827,000 between 1956 and April 1958. This decline marked the resumption of a long-term downtrend which was halted temporarily from 1953 through 1956.

The Bureau said, however, information from other sources indicates "the economic recession may have caused some return of workers to farm areas and partially retarded movement away from farms."

SEVENTEEN-PERCENT DROP

In the past 8 years, the farm population has dropped by 4,231,000, or nearly 17 percent. Whereas 1 in every 6 Americans lived on a farm in 1950, the ratio this year was 1 in 8. In 1910 every third American was a farm dweller.

The Bureau said over the years it has dropped many homes from the farm category because the occupants no longer made a business of farming.

Thus some people have been dropped from the farm population without actually moving.

LAND CONVERTED

Much land which formerly was farmed has been converted to residential and industrial property.

The principal reasons for the decline in farm population, however, are changes in farm technology and more opportunities in other fields of employment.

The 1958 survey shows 40 percent of the workers living in farm homes were employed off the farm, compared with 30 percent in 1950.

Since 1950, the number of farm residents between the ages of 20 and 24 has declined by one-third.

Small Business Hits the Jackpot

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1958

Mr. ROOSEVELT. Mr. Speaker, this has been a memorable Congress for the interest of small business. On the House side, much credit must go to Chairman WRIGHT PATMAN of the Small Business Committee, and it is important on both sides of the aisle for the constant efforts to convince the appropriate committees for the need for specific action. The results of the session's action are well sumarized in an article in the Sunday New York Times of August 17, on the front page of the business section. I enclose it, not only for the information of my colleagues, but I hope for wide distribution among thousands of small-business people who can and should be directly and favorably affected by the accomplishments of this Congress:

SMALL BUSINESS HITS THE JACKPOT—NEW LEGISLATION GOES LONG WAY IN PROV'DING TAX AND FINANCING RELIEF

(By Richard Rutter)

The ways of Congress probably are more predictable than is a slot machine. But there are times, it must be admitted, when there is a certain tantalizing resemblance.

Ask the Nation's 4 million small-business men. For nearly 5 years they—or rather their very articulate spokesmen in and out of Congress—pulled all the levers in an effort to win some measure of financial aid. They got lots of publicity and sympathy, but little else. Then, in the closing days of the 85th Congress: jackpot.

Chances are even the small-business lobby is rather taken aback by the bonanza. It consists of 3 important measures dealing with loans and tax relief. One has been signed into law, another is on the President's desk, and the other is expected to be there soon.

SBA NOW PERMANENT

In some ways, the first new piece of legislation may be the most far reaching. The Small Business Administration was set up in 1953 at a temporary agency to assist smaller concerns obtain credit. It has now become a permanent independent Federal agency.

The ceiling on the individual loans it may grant has been raised from $250,000 to $350,000. The interest rate charged has been reduced from 6 to 5½ percent. The little fellow now has a permanent big friend at court, so to speak.

The significance of the second new piece of legislation was dramatized in Atlanta, Ga., last week. The Citizens & Southern National Bank announced that it had authorized the investment of $325,000 in capital in a new corporation to be sponsored by the bank and formed for the express purpose of providing venture capital for small and expanding business. This was the quick reaction to the passage of the Small Business Investment Act of 1958.

The $325,000 put up by the Atlanta Bank will be augmented by $115,000 from interested individuals or corporations in that State, plus $60,000 from Citizens & Southern affiliates. The private investment will thus amount to $500,000, and the total initial funds to some $1 million including loans and investment aid from the Small Business Administration.

TWO HUNDRED AND FIFTY MILLION DOLLARS AUTHORIZED

Under the new law, that agency has been given $250 million in loan authority to furnish long-term equity capital to small business. The funds will not go directly to the individual entrepreneurs but to investment companies such as the one planned in Georgia. These concerns, in turn, will funnel long-term capital to small companies unable to obtain the needed financing elsewhere.

The investment companies must be formed by at least 10 persons, have a minimum capital and surplus of $300,000, half of which they they can get from the SBA and limit loans to not more than 20 percent of borrower's capital.

The recession notwithstanding, tax relief for the average taxpayer never got to first base in this session of Congress. With a minimum of fanfare, however, small business got several breaks:

Faster tax writeoffs on new equiument in the first year after its purchase.

Extension from 2 to 3 years of the period for which a loss may be carried back and applied against previous income, to gain a retroactive tax refund.

Ten years instead of 15 months in which to pay estate taxes on a business held by a few persons.

An increase from $60,000 to $100,000 on the amount of earnings that may be retained, instead of being distributed, without stiff tax charges.

Why all this attention to the small business?

The Small Business Administration defines a small business as follows: A wholesaler with annual sales of less than $5 million; a retailer or a dealer in services with volume of less than $1 million; a construction company whose annual receipts for the preceding 3 years have been less than $5 million; a manufacturer with 250 or fewer employees. Manufacturers with between 250 and 1,000 employees are classed as small or large depending upon the type of activity.

NINETY-EIGHT PERCENT OF COMPANIES ARE SMALL

On this basis, the overwhelming number of all American enterprises—more than 98 percent—fall into the small-business category. They account for a good 35 percent of all dollar sales. So it's impossible to talk on the American economy without taking full note of small business.

In recent years about 360,000 new enterprises have been started annually. At least 99 percent are small operations. Each year between 325,000 and 340,000 concerns have passed into limbo. And the vast majority of them have been small. The result has been a net increase in the business population of about 50,000 new companies a year.

The unfortunate majority have gone under for various reasons. Chief among them have been poor management, stong competition, lack of experience—and lack of credit. Until very recently there has been an almost complete dearth of knowledge about the importance of this last problem, and some economic observers have insisted that it was no problem at all. They contended that sound operators could obtain all the credit they needed, and that unsound ones had no business being in business.

Last year the research staff of the Federal Reserve System studied the whole matter of credit availability for the little fellow. The first installment of a massive report was delivered to interested congressional committees this spring. The survey is still continuing, and will not be completed until some time next year at the earliest.

THEY HOE A TOUGH ROW

Some conclusions, however, do seem evident from the Fed's findings so far. Generalizations are risky, but the consensus is that small companies are up against greater financial difficulties than the bigger ones. Their credit standings are lower, they find it much harder to get long-term loans and equity capital. Interest rates are higher, maturities shorter. The pinch is severest for those concerns that are able and willing to grow but are stymied by lack of funds.

Commercial banks are by far the chief source for small-business financing. Insurance companies, mutual funds, investment trusts, and institutional investors largely shy clear of small borrowers. Even the Government has contributed comparatively little. At the end of last year, for instance, the combined loan and commitment total for the SBA and the Veterans' Administration was 4 percent of the $6,900,000,000 in small loans outstanding by member banks of the Federal Reserve System.

That's all the more reason why the measures just enacted by Congress should gladden the heart of the corner butcher, tailor, and antique-candlestick seller. The establishment of private investment companies in particular may signal the beginning of a real breakthrough in the field of equity financing.

Nantucket Owner Hits Senate Quiz

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1958

Mr. BYRNE of Illinois. Mr. Speaker, again, I am glad to commend the Southtown Economist of my district for giving a factual and comprehensive report about the Nantucket Restaurant, also in my district, located at 10437 South Western Avenue, Chicago.

I certainly am sympathetic to and share Harold Reade's reaction to the treatment he received by the Senate Rackets Committee when he testified before this committee recently. Mr. Reade is the owner of the Nantucket Restaurant and I know the problems he has had with the labor union. It took plenty of courage to refuse to sign a sweetheart contract and I admire Reade for his fearlessness. Also, men who can still go through what he has experienced for some time and still be fair and just in their appraisal of the overall situation, should be applauded. This is Americanism in action.

My viewpoint is similar to restaurant owner Reade's feelings and that is I am opposed to racketeering in the unions but not to the unions, themselves. I am proud that my father pioneered for the rank-and-file labor union member

in the days before sweetheart contracts and I am sure if my father were alive today, he would back me to the hilt, and perhaps push me further than I have gone. The entire labor field has changed. Many good things have come to the rank and file who deserved it. But the tactics so prevalent of late and the fear which has been borne in the heart and minds of many, many members of organized labor is a sad commentary. The situation has developed sufficiently that if the exploitation is not corrected and ethical behavior restored, the gains won through the splendid effort of many honorable labor leaders, will be completely lost.

I would like for the RECORD to reflect the account of Harold Reade's experience in Washington and also to show, as per a Sun-Times story recently, that the Nantucket owner was not once seduced into signing a sweetheart contract.

I would like to reiterate some remarks I made on the floor of this Chamber this week. There should not be any adjournment until we have done something to correct problems in the labor field.

The articles follow:

[From the Southtown Economist of August 6, 1958]

NANTUCKET OWNER HITS SENATE QUIZ—SAYS SENATOR KENNEDY AND COMMITTEE COUNSEL KENNEDY BELITTLED RESTAURANT OPERATORS

United States Senator JOHN F. KENNEDY and his brother Robert, counsel of the Senate Rackets Committee, were charged yesterday by E. Harold Reade, proprietor of the Nantucket Restaurant, 10437 Southwestern Avenue, with deprecating honest witnesses in the Chicago "sweetheart contract" probe.

Still smarting from the rebukes he received in Washington, Reade told the Englewood Kiwanis Club at a luncheon in the Southtown YMCA that "the Kennedys in particular tried to drag Chicago restaurant people down to the level of hoodlums to take some of the heat off of the unions."

Evidently referring to the Senate Rackets Committee or its aids, Reade said:

"Those fellows don't always play the game on top of the table. They use some devious ways. Some of the things are not handled right."

Reade, who refused to sign a sweetheart contract and whose restaurant was picketed from October 1955 to November 1957 by a restaurant employees' union, said he "cooled his heels" outside Counsel Kennedy's office for days waiting to testify at the Rackets Committee in the hearing.

He stated:

"When I was finally called to the stand, I was introduced as less than cooperative and less than honest.

"This was totally undeserved and followed the Kennedy pattern of dragging restaurant owners down to the level of the hoodlums."

Reade said the Rackets Committee counsel used a phony wage scale to show that restaurant owners saved thousands of dollars a year by not paying union wages or by signing sweetheart contracts. Reade stated:

"The committee quoted from a contract negotiated with night clubs. There is no established wage scale for waitresses because they work under different conditions in various places. One restaurant pays a waitress more because she does the work of a bus boy in addition to waiting table, or helps out in the kitchen by making the salads the customers order."

"I have not yet found one restaurant man who knew he was saving money by not paying the union wage. I am not against the unions. I am against racketeers.

"I believe a great deal of good could come from the Senate investigation, despite the things about it I find objectionable, if the public could be sufficiently aroused to demand that conditions be corrected."

Reade said some good had already been accomplished. He stated:

"Governor Stratton and Mayor Daley have finally decided we need an antiracket picketing law in Illinois although they weren't for one during the last session of the legislature. And Chicago judges are at long last issuing permanent injunctions against unwarranted picketing although I was denied one."

Reade said:

"If I had gotten the full protection of laws already on the books the picket line would have been taken off my restaurant the first month."

He continued:

"The master-in-chancery ruled against us, recommending we get a limited injunction with all the teeth pulled out and that we pay half the cost of the trial. He had accepted the testimony of hoodlums as against that of honest men."

The speaker also denied the published report that the unions had a majority of the employees of the Nantucket when the picket line was set up.

[From the Chicago Sun-Times of July 21, 1958]

TWENTY-FIVE CAFES HERE ON SWEETHEART CONTRACT LIST

WASHINGTON.—Following is the list of 25 Chicago area restaurants released Friday by the Senate Rackets Committee.

The figures are amounts the committee claims each restaurant saved annually by avoiding union wages through sweetheart contracts.

Julians, 103 East Chicago, $9,900; Escape, Harlem and 29th, Berwyn, $4,200; Johnny's Steak House, 501 South Wabash, $11,000; Mickelberry's Log Cabin, 2300 West 95th, $19,600; Flanders Tea Room, 7501 South Exchange, $9,800; Richards, 3011 Harlem, Berwyn, $3,300; Beverly Woods, 11532 South Western, $21,000; Embassy, 6144 Cermak, Cicero, $2,000; Klas, 5734 Cermak, Cicero, $4,600; Esrig's Coffee Shop, 600 South Dearborn, $6,000; Nielsen's, 7330 West North, Elmwood Park, $8,200; Jack's Grill (a chain), $13,000; Homested, 12126 Vincennes, Blue Island, $8,500; Rupcich's, 4040 East 106th, $14,800; Peter Pan (a chain), $10,900.

Old Prague, 5928 Cermak, Cicero, $5,300; Allgauer's Fireside, 7200 North Lincoln, Lincolnwood, $14,700; Allgauer's Ridge, 6666 North Ridge, $5,600; Chris Carson's, $13,500; Martinique, 2500 West 94th, Evergreen Park, $33,100; Segal's, 8276 South, South Chicago, $11,000; De Mar's restaurants (three), $27,100; The Surrey, 10459 South Western, $1,100.

The total annual savings listed by the committee for the 25 restaurants is $258,500.

Transfer of Federal Land to the Rosebud Sioux Tribe

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 14, 1958

Mr. BERRY. Mr. Speaker, I am today introducing a bill at the request of the Rosebud Sioux Tribe, which provides for the transfer of 10,233.45 acres from the Federal Government to the Rosebud Sioux Tribe.

This is property which was purchased by the Federal Government for school purposes on the Rosebud Reservation and has long since served its purpose for school use. During the past years, it has been leased by the tribe to non-Indian ranchers with a portion of the rental going to the tribe. It is my understanding that this land was purchased out of profits from the school herd, and for that reason is actually Indian property, or tribal property.

My purpose in introducing this bill at this late date is that the committee to whom the bill is assigned may have the benefit of an early report in the next session of Congress in order that early action can be taken by the House.

Wilkes-Barre Broadcasting Co. Executive Will Receive Benjamin Rush Award

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of August 14, 1958, which discloses that Mr. Roy E. Morgan, executive vice president of Wyoming Valley Broadcasting Co., will receive the Benjamin Rush Award presented annually by the Medical Society of Pennsylvania to the lay individual who has contributed outstandingly to the health of the citizens of Pennsylvania:

MORGAN WINS RUSH AWARD—MEDICAL SOCIETY NAMES LOCAL MAN

Roy E. Morgan, Forty Fort, executive vice president of Wyoming Valley Broadcasting Company, WILK, Wilkes-Barre, has been selected to receive the 1958 Benjamin Rush Award presented annually by the Medical Society of the State of Pennsylvania to the lay individual who has contributed outstandingly to the health of the citizens of Pennsylvania. The award will be made in Philadelphia October 14 at the State dinner during the 108th annual session of the medical society.

"As moderator of the Safeguard Your Health television series of the Luzerne County Medical Society for three seasons, Morgan has contributed his talent, time, and effort to health-improvement projects for the people of northeastern Pennsylvania," declared Dr. James W. Boyle, of Luzerne, president of Luzerne County Medical Society.

A native of Nanticoke, Morgan was graduated from Hanover Township High School and Pennsylvania State College; he has been a newspaper reporter, college administrator, and professor, and during World War II he served as assistant chief, Gasoline Rationing, OPA, in Washington, D. C. He is immediate past president of Pennsylvania Association of Broadcasters.

Morgan has been active as president of Family Service Association and is a director of United Fund, Community Concert Association, Municipal Merger Commission, Cerebral Palsy Association, and Wyoming Valley Hospital. He is past president of Wilkes-Barre Kiwanis Club and immediate past lieu-

tenant governor, Division 15, Pennsylvania District of Kiwanis International. He is a Mason, a member of Westmoreland Club, is married, and has two children.

The State Benjamin Rust Awards are in the form of a large medallion featuring a bas-relief portrait in bronze of Dr. Rush, distinguished Philadelphia physician and patriot, and a signer of the Declaration of Independence. Nominees for the State award included organizations and individuals who had previously been selected to receive miniature medallions awarded individually by county medical societies. A committee composed of members of the board of trustees of the State society made the State award selections.

Address by Hon. Nelson S. Dilworth

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by the Honorable Nelson S. Dilworth, State senator of California, before a public meeting in Palm Springs, Calif., celebrating the adoption of the Constitution of the United States, together with a resolution of the Senate of California, authorizing publication and distribution of his address:

SENATE RESOLUTION 196, RELATIVE TO THE FREEDOM FOUNDATION AWARD TO SENATOR NELSON S. DILWORTH

Whereas the Senate of the State of California has been honored through the selection of one of its members, the Honorable Nelson S. Dilworth, to receive the George Washington Honor Medal awarded to him by the Freedoms Foundation at Valley Forge with the additional recognition of second place in national competition in public addresses that help to bring about a better understanding of the American way of life; and

Whereas th Freedoms Foundation exists to create and build an understanding of the spirit and philosophy of the Constitution and Bill of Rights and of our indivisible "bundle" of political and economic freedoms inherent in them, and to inspire love of freedom and to support the spiritual unity born of the belief that man is a dignified human being, created in the image of his Maker, and by that fact posssor of certain inalienable rights; and

Whereas the Freedoms Foundation selects as its awards jury recognized leaders and the most highly esteemed of our citizens from all parts of the Nation, the jury of 30 which made the award herein referred to including 14 members from among the justices of the supreme courts of the various States of the Nation; and

Whereas the award to Senator Nelson S. Dilworth specifically states that the trustees, directors and officers of Freedoms Foundation of Valley Forge announce with pleasure the selection of Hon. Nelson S. Dilworth by the distinguished National Awards Jury to receive the George Washington Honor Medal for Our Constitution, Have We Outgrown It?, an outstanding achievement in helping to bring about a better understanding of the American way of life; and

Whereas the address for which this honor was awarded was delivered at Palm Springs in California, at a public meeting in celebration of the adoption of the Constitution of the United States; and

Whereas the Honorable Nelson S. Dilworth has served the people of Riverside County and the State of California as a patriotic public servant for many years and as a member of the legislature since 1937: Now, therefore, be it

Resolved by the Senate of the State of California, That it congratulates its distinguished member upon the receipt of this well-earned honor; and be it further

Resolved, That the address of Senator Dilworth, Our Constitution, Have We Outgrown It?, be printed in today's Journal; and be it further

Resolved, That the secretary of the senate be and he is hereby directed to present to Senator Dilworth a suitably prepared copy of this resolution, and to have printed for general distribution 1,000 copies of his address.

OUR CONSTITUTION, HAVE WE OUTGROWN IT?
(By Senator Nelson S. Dilworth)

Mr. Chairman, friends and patriots; it is a great privilege to come here at the invitation of so great an organization to share with you a few thoughts on the most urgent question or decision before the American people today. At this time of the year on or near the anniversary of the Constitution of the United States it is a wise custom for the people of the United States through the leadership of their most distinguished patriotic organizations to give thought to the blessings and benefits that have come to us through the operation of the principles of government and liberty firmly established by the Constitution.

In my introductory sentence I referred to "the most urgent question, before the American people." Unfortunately the American people are questioning the merits of the Constitution today as never before. Wherever it is discussed there are those who would sacrifice the great eternal principles of the sovereign rights of the citizen for the temporary and illusive benefits of the all-powerful state.

Today I want to try to bring to you a clear and present delineation of the matchless achievements of the American people working in the protective framework of our Constitution. To set out on so great a task it is imperative that we refresh our knowledge of the events immediately preceding the Constitution, events which were the founda-on which it was built.

Our Nation was founded on faith in Almighty God our Creator and a belief in His book. Liberty and freedom cannot be preserved without a belief in the God who created them. Liberty and freedom never have been preserved without belief in God and they never will be. Worship of God is necessary to build character in men to enable them to preserve freedom. It is a truth that we tend to become like what we worship.

In all history, our Declaration of Independence is the most humble and reverent declaration of human rights and responsibility the world has ever recorded. There it stands. No words of mine or of any man can add to it or take away from it the glory of its truth and reverent reliance on God's protection and assistance.

We cannot too often return to the sublimely courageous phraseology of the great Declaration. Let me quote a significant selection.

"When in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

"We hold these truths to be self-evident that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

"We therefore the Representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the World for the rectitude of our intentions, do, in the name, and by the authority of the good people of these Colonies, solemnly publish and declare, that these United Colonies are, and of right ought to be, free and independent States; and for the support of this declaration, with a firm reliance on the protection of Divine Providence we mutually pledge to each other our lives, our fortunes, and our sacred honor."

What could be more solemn and dignified than these words penned in a time of great strife and bitterness? Who could add to one line or sentence? Today it is our obligation to live up to these high sentiments. If we neglect these great principles of human relations and are apathetic to their emulation and preservation, we shall lose in time the incalculable benefits that have flowed from them. Without the Declaration there could have been no Constitution and without the Constitution there could have been no such freedom and prosperity as we know it.

I call upon you as my witnesses here today that there is no place in the Declaration of Independence that guarantees any results. This document and the Constitution only safeguard an opportunity for the American people to establish and maintain liberty and to provide national defense against all attack within or without. They will not work themselves. We cannot have liberty and peace without noble effort and self-sacrificing service any more than we can have bread without labor and toil. These great documents are entirely in the language of opportunity, a chance to achieve for the people of America.

So, tonight, let us look at our Constitution and attempt to identify its fruit in our modern American way of life. What has the Constitution enabled the American people to accomplish toward realizing in government the ideals of the Declaration: life, liberty and the pursuit of happiness?

First we have accomplished freedom of life. We have established effective curbs on the police and military forces of our country. The citizen cannot be placed in jeopardy for life or liberty by the police or even by any judge against the will of the accused. Every citizen may count on this security. The people have withheld from Government officials and reserved to themselves in the form of juries the right to judge the guilt or innocence of their own neighbors. Americans have established the greatest consideration and fairness toward those accused of wrongdoing ever known to exist in this world. Even for petty offenses the citizen accused can demand a trial by a citizen jury of his peers within the jurisdiction of his alleged offense. This vital feature of American liberty is not equaled in other governments.

Other great powers are withheld from our Government officials by the people. Leaders of the national Government are powerless to alter the Constitution if they are faithful to their solemn oaths to uphold and defend it. Only by referring proposed amendments to the elected legislatures of the States or to elected conventions can amendments be effected.

The history of liberty the world around has been the story of resistance by the people to the encroachments of their own government. No matter how well intentioned, human beings in public office, some of them at least, tend to expand their power and enlarge their activity. In no other country have the people more safeguards, more weapons to strengthen their resistance by peaceful means to such trespass of the liberties which have been reserved to the people by the Constitution.

In the Constitution itself there are numberless checks and balances to safeguard our country against arbitrary caprice in official acts. Congressional action is subject to Presidential veto. The veto may be overridden by a two-thirds vote in each House of Congress. The President must obey the laws duly enacted and must uphold the Constitution. If he fails, Congress by the process of impeachment may remove him from office. The President may not touch a single dollar in the Treasury without first receiving an appropriation by Congress. The powerful House of Representatives in Congress is required to come before the people for election or removal every 2 years. In almost 170 years no one has subverted our constitutional processes and today our Government is the oldest national government in the world without major change in its fundamental makeup.

Another check or balance on the Presidential power is that the most important appointments made by the President are subject to the approval and consent of the Senate. Thus the important policy decisions of the American Government are for the most part the result of the concerted action of several or even many officials.

Historically the last word in the defense of the Constitution has been the prerogative of the judiciary with the final resort being the Supreme Court. Acts of Congress may be challenged in the courts by any citizen and if the courts find that they they are in conflict with the Constitution, the congressional act is void. So we have a government of laws made by many rather than one official and all subject to the scrutiny of the courts as to their conformity with the Constitution.

The security of the American citizen in his constitutional rights is our Nation's most outstanding and unique political accomplishment. So much for our political institutions.

Equal or perhaps greater significance attaches to the economic results that have followed the security of our citizens in political rights. The best characterization of our rights is the phrase in the Declaration, "life, liberty, and the pursuit of happiness." But life would be undesirable without liberty and liberty unenjoyable without the opportunity to seek happiness and contentment. Happiness and contentment ordinarily include securing a home, shelter, food, clothing, and a gainful occupation and other property rights. We hear much of the rights of freedom of speech and press but not so often do we consider the vital necessity of the right to possession of property lawfully acquired. This is securely established in the Constitution but is little glamorized because it is not often challenged in regard to the possessions of the average family.

The right to be secure in the ownership of a home of your own, the right to labor and to keep the product of your labor or business has so inspired the American men and women that they have produced an abundance of good living nowhere equaled in all the world's history.

American industry, the teamwork of capital, management, and labor, produces in such abundance for American markets as to make our Nation the financial banker of the whole world. American industry did not grow big by regulation, but by service rendered. Competition is the most stimulating regulator ever found.

Both the investor and the laborer are guaranteed the right to organize and to cooperate together to increase their gains. Under free enterprise, the people, all of the people, of the United States have a greater purchasing power—have more, buy more, possess more, and use more food, clothing and housing and everything else—than all the people of Europe and Asia combined. These are obvious and very practical achievements of the American people under our constitutional liberties.

Hours and days of labor are reduced. Working people ride to work in automobiles instead of walking or riding a bicycle as in other countries. Clothing is purchased with one-third the hours of labor that are required in the most favored countries of the eastern world. Our homes are larger and filled with labor-saving equipment unknown in other lands. Also we have achieved the widest distribution of good living standards among more of our people than elsewhere.

Another result of our unprecedented industrial production is that it has become our greatest bulwark of defense. Not only was our country able to produce the vast store of arms and ammunition for our Armed Forces in the late World War but great quantities of armament were supplied to our allied free nations. Freedom is as vitally important to us for the preservation of our national existence today as when the Constitution was written 170 years ago.

Perhaps an even greater product of American freedoms is the cultural advancement in our country. Fraternal lodges, service and luncheon clubs, recreational clubs and charitable organizations abound in every city, town, and hamlet. All are developing new heights of service. Religion of many faiths may be freely exercised within our country and is a potent, great, and lasting influence for good.

We tax the successful to make possible services to the less fortunate. Competition is real in America but we do not tread down those who are less successful. We have a thousand humane laws for the benefit of those who are unfortunate or handicapped. Our provision for those in need exceeds the rewards of skilled laborers in four-fifths of the rest of the world. These services are made possible by the production and skills of the successful.

Another distinctive thing our Constitution has done is that it has attracted as immigrants to this land over 22 million people. This is unique in all the history of mankind. They have left their loved native lands and the homes of their childhood, parted from kindred and friends to cross the wide seas to come here and swear allegiance to our Constitution. Gladly they have brought their little ones, their families and posterity to leave them in the keeping of the American people under our Constitution.

To do this, to make such a drastic change in their life's surroundings means two things: Life under our Constitution had great attractions for them and life away from the benefits of our Constitution was one of privation, hardship, and lack of opportunity.

What would you take for the privilege of living in America? What would induce you to leave America once for all never to return? Oh, yes, the Constitution makes a difference. Let's keep it unimpaired. Don't let the agents of a foreign enemy talk you into weakening it or subordinating our Constitution to any foreign ideas.

I could go on and on and recite the familiar things that we take for granted but that are only possible because of our political framework, our Constitution, but my time is passing quickly. Let me tell you some things that are not the prime cause of our American achievements. First, too much credit is given to our natural resources. They do not exceed those of many other populous lands. Russia has many times the standing timber than America ever had. We have only a small percentage of the mineral, coal and oil deposits of this world. Our acreage of good agricultural land is less than 6 percent of that in the world. No, it is not the material land within our borders that has made us great; it is true that we have developed our resources and made good use of them, more so than other peoples, but that is American industry, thrift, and energy spurred on by the possibility of enjoyment of one's own achievements.

Another thing that cannot explain our material success is our location, far from the principal markets of the world. We are halfway around the world from the greatest population centers. We have been materially successful in spite of our isolated location, not because of it.

Again, no one can attribute our prosperity and material success to military conquest. We hold and rule no conquered land. Along our farflung land frontiers our neighbors dwell peacefully and unafraid, without forts or defenses of any kind. The American Constitution is the greatest peace document ever produced by men. Our weaker neighbors pay us no tribute, but dwell secure under our protection from the greed of conquest by totalitarian countries. The flow of wealth is not from the weak to this powerful Nation, but from us to the weak and underdeveloped countries.

Again, let us look at the throngs of people coming to America. Of necessity we have had to wisely limit the number, but they are coming by hundreds of thousands every year, the poor and oppressed of other lands, the refugees from political dictatorships, and the ambitious youth who seek to escape the limitations of social and economic restrictions across the seas. Yes, there is a constant movement of population from even the mildly socialistic countries seeking the opportunities of free enterprise in America.

But let's look at the other side. Who is leaving America? Who are fleeing from America? Who are leaving with no thought of returning? They are so conspicuous I could almost name them to you, the Gerhardt Eislers and others who have been caught in the attempt to destroy America. I wish we could get enough action, official and judicial action, careful but firm, that would run out a lot more of these conspirators that plot to destroy all that we hold dear.

Obviously our Constitution is a very important document to a great many people. It was Abraham Lincoln who said, "If destruction be our lot, we must ourselves be its author and finisher. As a Nation of free men we must live through all time or die by suicide." But we have a duty to uphold and protect our freedom for it was Edmund Burke who first told us, "All that is necessary for the triumph of evil is for good men to do nothing." But what evil do we face, do you ask.

Karl Marx declared, "Christian brotherly love has been tried for 18 centuries and found wanting. I will found my movement on a more dynamic force, class antagonism." This is the challenge the world faces today. This is the battle cry of the impatient conquerors of 800 millions abroad, as they cast their envious eyes at our riches.

And how are we to meet that challenge? First we must meet it with the truth. The truth about America and its greatness and how we achieved it must be carefully taught to all of our youth and made available to all adults. Where communism and other forms

of government have to be considered, the destructive evils that are inseparable from Communist operation must be included on a truthful and factual basis.

The American people are willing to fight Communist attacks on free men overseas but have not awakened to the need to defend leaders and institutions in our homeland from obviously Communist-inspired attacks. Our most dangerous enemies are not marching under foreign flags but infiltrating here in our affairs.

Of what avail is it that American youth win costly victories on bloody foreign battlefields if we at home allow similar enemies to discredit our Constitution and weaken the faith of our people in our American institutions that make our American economic system productive and beneficial to all of us.

Our enemies wage the cold war by word of mouth and by the printed page to weaken, deceive, and divide their prospective victims. They announce the liberation of the people of any country they conquer. They proclaim their new dictatorships to be people's democracies. They call their despotism republics. Communists have stolen the language of freedom and successfully perverted it to serve their own methods of conquest and subjection. They use our most precious words to enslave unsuspecting peoples.

Fortunately our courts have held that our Constitution is clearly not a suicide pact. The thoughtful men who frame the words and spirit of this great charter of our freedom had no thought of guaranteeing unrestrained action to those who are working to destroy our freedom and substitute the Soviet dictatorship or any other form of centralized power.

Our State and national lawmakers have acted to restrain those who plot the overthrow of our Constitution. The courts have convicted large numbers of those accused but our vigilance must continue.

And for us, what is there for us to do? First we must use our freedom of speech to help preserve our freedom. We must speak out in defense of our Constitution and in defense of our American production system. Of course, there are inconveniences. America is growing. Like our highway construction there are detours, temporary, of course, on our way of life. But I maintain that America is 90 percent all right and the other 10 percent is under construction.

When folks read a newspaper or book they like to look at the pictures even though they skip through the reading matter. So they may not pay too close attention to what we say, but if our lives are neighborly and helpful, and our loyalty to our country is obvious in all our daily actions, the influence of us all cannot be anything but helpful and an inspiration to others to greater loyalty.

Also, every American should be ready to give a reason for his faith in the Constitution. He should read it and study it. He should know it from beginning to end. Get from your libraries the fascinating story of how it was written. Learn to know and tell others about the interesting lives of Madison, Jefferson, Washington, and Hamilton and the others.

There is only one stronghold of freedom militarily able to resist the power of world Communist dictatorship today, and that is our country built on our Constitution.

Will you not serve in its defense in peace as unselfishly as many of you have served in war? Speak out effectively but kindly for the preservation of the Constitution and American freedoms. Have we outgrown our Constitution? Perish the thought. It is true that America has grown from 3 million souls to 170 million under the form of government based on our Constitution, but the Constitution has grown with America in usefulness and effectiveness. All of its principles of political procedure are sound and productive of rich benefits to the people. The stirring events of the long years of our Republic have so vindicated the wise and just rules of our immortal Constitution that I sometimes wonder if we have grown in appreciation as much as the Constitution has grown in importance and power for good to all the world. Shall we not always swear our undying loyalty to that document described by the English statesman, Gladstone, long years ago, "The most wonderful work ever struck off at a given time by the brain and purpose of man."

This Constitution of 1789 gave strength and permanence to the infant Republic and taught it to walk. In the youthful years and adolescent stages of our political development the Constitution restrained the impetuous leaders and guided them in a safe path.

Then through the great hour of sacrifice and trial when brother resisted brother, the Constitution was the beacon star of a peaceful settlement and reconciliation. Through the great wars with Spain and Germany, our Constitution gave great strength to our morale and fighting spirit. And can one say less of the war in the Pacific, where was marshaled the greatest fleet of naval warships, the mightiest army of men, and the most powerful aerial squadrons of all time until General MacArthur landed in Japan and set up a military government. And what was the result? In a few years that proud nation accepted peace with a modified Government influenced by our Constitution. Today, again free and sovereign, the Japanese cherish their new freedoms derived in spirit from ours.

What gretater service could be rendered by our Constitution than to serve as a basis of reconciliation and peace among men. God grant that we as a people may grow in understanding and helpful living under our Constitution to worthily interpret to the world its basic principles of peace.

Not only have we not outgrown our Constitution, but as we face a future filled with new problems it is the greatest hope of men.

It is the chart and compass of men of good will whose motives are love and mercy for all men everywhere. Amid the night of wars and preparations for war our Constitution serves as the guiding light from the North Star as American leaders blaze new trails toward peace.

Hon. Sam Rayburn

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. HAGEN. Mr. Speaker, a great deal has been written about the distinguished Speaker of the House of Representatives, who is one of the great men of this country. One of the most recent of such writings is an article which appeared in the August 7 issue of the Los Angeles Times written by Bill Henry. I submit this article for the benefit of the other Members of the House:

BY THE WAY, WITH BILL HENRY

WASHINGTON.—To most Americans, who seldom, if ever, get to see the House of Representatives in action and if they do probably don't know who is presiding, SAM RAYBURN is just that fellow with the gavel who bobs up on TV every 4 years at the Democratic National Convention and bangs for law and order whenever some of his excitable fellow Democrats get out of line. That's not the half of it.

MR. SPEAKER

Our Mr. SAM has been Speaker of the House of Representatives longer than any other man, longer even than the celebrated Joe Cannon, and beyond that he has been a Member of the House longer than even he cares to remember. If you think he runs the convention with an iron hand, you should see him running the House. Mr. SAM knows the rules forward and backward, he understands the strange ways of his conferees both in committee and on the floor, and he is able to judge to the width of a cat's whisker exactly how far to let things go before he steps in and sets the boys on the right track if they show signs of breaking out of the reservation. What Mr. SAM says, goes.

PROGNOSTICATOR

So it was a good thing, this week, to attend Mr. SAM's daily press conference which he holds for about 3 or 4 minutes each day just before he steps out onto the floor to open the day's session. Mr. SAM's time is in demand and there is always a jam of people trying to get in to see him but somehow he regularly leaves time for Fishbait Miller, the House doorkeeper, to call the gentlemen of the press in for a moment before the business of the day gets underway. You walk in and Mr. SAM is more or less buried in a big leather chair behind his desk, usually with House Majority Leader MCCORMACK of Massachusetts alongside him.

THE SCHEDULE

So somebody asks when the Congress is going to go home. Says Mr. SAM with some finality, "we're going to stay here until we're through." He is pressed for something more definite than that and he rattles off a list of bills on the schedule for the day. When he finishes he says he guesses that's just about the load of poles for the day, which apparently is the way they sum things up down in Bonham, Tex., where he comes from. This reminds somebody about the education bill—scholarships for the deserving youth. Mr. SAM is not too sanguine or, apparently, too enthusiastic. He mutters something to the effect that we got to educate everybody—make them smart. You gather then the old Texas schoolteacher thinks you can't make a smart guy out of a dumb cluck.

IN OPERATION

He looks at the clock and sees he has about 30 seconds to get to the floor, whack the gavel and turn the dominie loose with the opening prayer so he gets up and starts for the door. Somebody asks about the eight Texas counties that had been invited to secede from Texas and join New Mexico. Old SAM just snorts and opines that there's a lot more nonsense than sense in the world these days. Out on the floor he gets things going, then disappears but when it looks as if the Republicans are about to defeat a Democrat sponsored bit of legislation he slips into a seat on the floor from which he can easily get to the microphone for one of his rare floor appearances.

Reply From Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 15, 1958

Mr. ROOSEVELT. Mr. Speaker, in response to numerous inquiries, I am enclosing the reply of the Chairman of

the Federal Communications Commission concerning the Commission's position on the content of the material offered to the public by broadcasting stations:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., July 25, 1958.

This is with further reference to your letter of June 9 and acknowledges your letter of July 23, 1958, concerning the Commission's program responsibilities. In your letter of June 9 you refer to the Commission's deferral of action upon the applications for renewal of licenses of certain of the Atlanta, Ga., radio stations because of programing matters. In both of your letters, you raise essentially three questions: (1) Does the FCC make a systematic check on radio programs; (2) does the FCC feel that it has enough legislative authority to act in this area; and (3) if not, what enabling legislation might the Commission deem necessary to fulfill its responsibility for good programing?

Referring first to the Atlanta, Ga., stations, it is true that after considering the applications for renewal of licenses of the Atlanta radio stations, the Commission deferred action on certain of them and directed the staff to address letters to the licensees of the stations inquiring with respect to the questions raised as to whether the stations' programing was in the public interest. The staff sent such letters to the licensees and the Commission has now received replies from all of the stations. At the present time, the staff is reviewing the replies and it is expected that in the near future, the Commission will give further consideration to the staff's recommendations.

As you may know, section IV of the renewal application (form 303), a copy of which is enclosed, constitutes the applicant's statement of program service. This section is completed and filed by each of the more than 4,000 licensees when they apply for renewal of licenses, and serves to give the Commission a picture of their over-all programing operations. Over the past 18 months the Commission has carefully reviewed its authority over programing and has considered various proposals for the revision of said section IV. At the present time, the Commission's staff is considering revisions of the section proposed by an industry committee of the Bureau of the Budget. It is believed that the staff will be prepared to report on these proposals to the full Commission in the early fall.

I have had occasion within the past few days to comment with respect to the Commission's authority in the field of programing. In testifying before the Senate Committee on the Judiciary with reference to H. R. 10378, making inapplicable antitrust laws to certain professional team sports, I said in part:

"No doubt this committee is aware of the restrictions in section 326 of the Communications Act that prevent the Federal Communications Commission from exercising the power of censorship over radio communications or signals transmitted by any radio station. This, of course, includes television. The restrictions on the Commission exercising censorship are indeed broad and this Commission feels that generally it has no authority either to prevent a particular program being presented or to require that the station broadcast any particular program. The policies of this Commission have been, where feasible, to further the broadest possible variety and balance in the programing of radio and television stations, and to further the public interest, convenience and necessity whenever possible where it relates to broadcasting. The absence of direct authority and statutory jurisdiction over specific programs has not been construed as disabling this Commission from adopting policies to encourage overall improvements in programing as distinguished from encouraging or discouraging any particular program. We see nothing in the bill which leads us to believe that Congress intends that this bill shall modify the Commission's jurisdiction as to programs."

Enclosed is a copy of my formal statement which may be of interest to you.

I believe that the foregoing fully answers the questions you have asked. I am pleased to know of your interest in the matter of broadcast programing and the Commission's role with respect thereto. If you have further questions concerning this subject, I shall be glad to answer them.

Sincerely yours,

JOHN C. DOERFER,
Chairman.

(Formal statement referred to by the Chairman is also appended.)

STATEMENT OF HON. JOHN C. DOERFER, CHAIRMAN OF THE FEDERAL COMMUNICATIONS COMMISSION, ON H. R. 10378, MAKING INAPPLICABLE ANTITRUST LAWS TO CERTAIN PROFESSIONAL TEAM SPORTS BEFORE THE SENATE COMMITTEE ON THE JUDICIARY (85TH CONG., 2D SESS.), JULY 15, 1958

My name is John C. Doerfer. I am Chairman of the Federal Communications Commission, and I appear today as a witness in connection with your consideration of H. R. 10378.

The bill under consideration, among other things, would make the Sherman Act, the Clayton Act, and the Federal Trade Commission Act inapplicable to four organized professional team sports. The inapplicability of those statutes refers to 5 definitive areas, 1 of which is subparagraph 4 of section 1 of the bill, which relates to the regulation of rights to broadcast and telecast reports and pictures of sports contests. Although the quoted subparagraph would appear to deal with the communications field, it does not appear, in any way, to amend the Communications Act of 1934 (47 U. S. C. 151 et seq).

No doubt, this committee, is aware of the restrictions in section 326 of the Communications Act that prevent the Federal Communications Commission from exercising the power of censorship over radio communications or signals transmitted by any radio station. This, of course, includes television. The restrictions on the Commission exercising censorship are indeed broad, and this Commission feels that generally it has no authority either to prevent a particular program being presented or to require that the station broadcast any particular program. The policies of this Commission have been, where feasible, to further the broadest possible variety and balance in the programing of radio and television stations, and to further the public interest, convenience, and necessity whenever possible where it relates to broadcasting. The absence of direct authority and statutory jurisdiction over specific programs has not been construed as disabling this Commission from adopting policies to encourage overall improvements in programing as distinguished from encouraging or discouraging any particular program. We see nothing in the bill which leads us to believe that Congress intends that this bill shall modify the Commission's jurisdiction as to programs. It seems to us, therefore, that the bill concerns itself primarily with the public interest considerations of antitrust matters relating to professional team sports. We believe that these are policy matters for the appropriate determination of the Congress.

The action on this bill undoubtedly will have a direct bearing on the nature, variety, and amount of sports programing broadcast to the public. In our judgment, the public interest is best served by having available to the public the widest possible choice of programs. The question of whether or not this legislation will result in less sports broadcasting is important to the public, and it is a very pertinent question to which the Congress should give very serious consideration. Sporting events evoke tremendous interest, and they are among the most highly popular programs that are received by the viewing public.

Mr. Speaker, the queston still remains in view of this letter: Does the Commission need a more direct instruction that Congress feels the American public is entitled to reasonably balanced presentations from the radio stations? I think the answer is clearly "Yes."

Wilkes-Barre American Legion Post 132 Awarded Special National Citation for Outstanding Child Welfare Program

---

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 18, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of Wednesday, August 13, 1958, disclosing that Wilkes-Barre American Legion Post 132 has been awarded a special citation by the American Legion National Headquarters for carrying out the most oustanding child-welfare program in the American Legion's 12th Pennsylvania district:

POST 132 PROGRAM WINS NATIONAL LEGION CITATION—CHILD WELFARE COMMITTEE ACTIVITY IS RATED MOST OUTSTANDING IN 12TH DISTRICT

Wilkes-Barre Post 132, American Legion, 45 North River Street, has been awarded a special citation by the American Legion national headquarters in Indianapolis for carrying out the most outstanding child-welfare program in the 12th District.

Commander Wendell M. Evans said: "Child welfare is one of the American Legion's major programs and we are proud that our efforts have been honored in this way."

The commander gave credit for winning the award to John McKeown, child-welfare chairman of the post; George L. George, James J. Lavin, John O'Krongoly, Michael B. Rushton, Chelsea Williams, and Frank Roache, all members of child welfare committee.

The special citation was presented to the post by Dr. A. H. Wittman, department child welfare chairman. It is signed by American Legion National Commander John S. Gleason, National Child Welfare Chairman Maurice T. Webb, Child Welfare Director Randel Shake, State American Legion Commander John W. Collins, State Adjutant Daniel Shaub, and State Child Welfare Chairman Dr. A. H. Wittman.

Once each year all American Legion posts are required to submit a report of their work for children and youth. It was on the basis of this report that the local post was selected as having carried on the most outstanding program in the district during the last 12 months.

Daily Digest

HIGHLIGHTS

Senate passed bill on criminal confessions in evidence, cleared seven sundry bills for President, and took up a judicial procedure bill on which amendment to limit Supreme Court jurisdiction is pending.

House cleared social security and welfare funds disclosure bills for President and sent Federal scholarship bill to conference.

Senate

Chamber Action

Routine Proceedings, pages 16994–17035

Bills Introduced: 8 bills and 3 resolutions were introduced, as follows: S. 4308–4315; and S. Res. 383–385.

Pages 16995–16996, 17140–17141

Bills Reported: Reports were made as follows:

H. R. 9407, providing additional opportunity for certain employees to obtain career conditional and career appointments in civil service (S. Rept. 2474);

H. R. 11009, providing for the establishment of Grand Portage National Monument, Minn. (S. Rept. 2475);

H. R. 1493, and H. R. 10559, private bills (S. Repts. 2476–2477);

H. R. 11749, to extend the Renegotiation Act of 1951 for 6 months, with amendments (S. Rept. 2478);

S. 4198, disposal of federally owned property of the Hanson, Company, and Houma Canals, Louisiana, with amendment (S. Rept. 2479);

H. J. Res. 654, reimbursement recommendations for certain highways on the Interstate System (S. Rept. 2480); and

H. R. 12728, to amend the Longshoremen's and Harbor Workers' Compensation Act with respect to third-party liability, with amendment (S. Rept. 2481).

Pages 16995, 17140

Jefferson Memorial—Correction: On page D866 of DAILY DIGEST of August 18, 1958, it was erroneously reported that S. 4085, providing for the construction of the Jefferson National Expansion Memorial at the site of old St. Louis, Mo., was passed that date on call of calendar. Actually, this bill passed the Senate on August 16, 1958, as reported on page D864 of DAILY DIGEST.

Bills Referred: 11 House-passed bills were referred to appropriate committees. Pages 16994, 17035

Calendar Call: Order was entered for call of calendar on Wednesday, August 20, from Order No. 2484 (H. R. 12365, private bill). Page 16994

Coal: Senator Kerr withdrew his motion entered on August 16 for reconsideration of vote by which Senate on August 14 had passed S. 4248, to create a Coal Research and Development Commission. Page 16996

D. C. Juvenile Court: Senator Javits was appointed as a conferee on H. R. 7785, to provide for the appointment of one additional judge for the juvenile court of the D. C., in lieu of Senator Morton, excused.

Page 16997

Education: Senate insisted on its amendment to H. R. 13247, National Defense Education Act of 1958, agreed to hold conference requested by House, and appointed as conferees Senators Hill, McNamara, Yarborough, Smith of New Jersey, and Allott. Page 17075

President's Communication—Appropriations: Communication was received from President transmitting proposed supplemental appropriations in the amount of $119,300,000 for Department of Health, Education, and Welfare, and $70,410,000 for the Department of Labor for fiscal year 1959; and $54 million for Post Office Department for fiscal years 1957 and 1958—referred to Committee on Appropriations and ordered to be printed as S. Doc. 117. Page 16994

Bills Cleared for President: The following six bills were cleared for President when Senate concurred in House amendments thereto:

Colorado River: S. 3448, to exempt Seedskadee unit, Colorado River Basin project, from acreage limitation provisions of Reclamation Act;

River basin study: S. 4021, to establish the U. S. Study Commission on the Savannah, Altamaha, St. Marys, Apalachicola-Chattahoochee, and Alabama-Coosa River Basins;
